>: DTSS code or CTCSS subaudible transmitted by the NWS station whenever
>: they issue a weather bulletin.

it is a very audible 1050Hz tone. Sometimes my older alter radio reacts to
one of the local announcers' voice and chirps at me.

The organization is up to the state frequency coordinator. Some
coordinators choose to arrange their listings by frequency, others, by
city, still others by geographic area. It often depends upon who
complains the loudest... and most complainers are the mobile ops who
generally want listings by coverage.

MDS>Recent 160 meter conditions top the news this week. K7SS reports
MDS>that on January 29 during the CQ WW 160 meter contest, W7XR worked
MDS>OH7MS on long path at 1428z. This was 80 minutes before local
MDS>sunrise at W7XR, and signals were strongest on a beverage antenna to
MDS>the west. K7SS thought that this was the first 160 meter long path
MDS>contact to Europe from North America, but it now appears that N6SS
MDS>beat this record by 20 minutes, when he worked OH7MS at 1408z. With
MDS>W7XR and K7SS in Washington State, and N6SS in Arizona, N6SS worked
MDS>OH7MS 6 minutes before local sunrise and W7XR worked him 80 minutes
MDS>before his local sunrise. Congratulations to all.

MDS>Comments to the author of this bulletin can be sent via packet to
MDS>KT7H N7DUO.WA.US or via internet to tadssc.com.

MDS>Solar flux last week was unchanged from the week prior. Conditions
MDS>were unstable on the 11th through the 14th, with many periods of K
MDS>indices at 5 or 6. The A index peaked at 33 on the 13th.

MDS>Solar flux should peak around 96 on the 19th, then head back to the
MDS>mid eighties region. Active geomagnetic conditions due to recurring
MDS>coronal holes are expected to begin again around February 26, and
MDS>gradually increase through mid-March.

MDS>Sunspot Numbers for February 9 through 15 were 24, 38, 23, 24, 26,
MDS>36 and 36, with a mean of 29.6. 10.7 cm flux was 83.7, 81.5, 81.1,
MDS>81.1, 85.7, 82.4 and 84.9, with a mean of 82.9.

MDS>The path projection for this week is from Hawaii and Anchorage,
MDS>Alaska to Macao.

MDS> From Anchorage, 80 meters looks good from 1045 to 1900z, and 40
MDS>meters from 0930 to 2030. 30 meters should be good around 1900 to
MDS>2000 and again from 2200 to 2300 and around 0800. Check 20 meters
MDS>from 2230 to 0230, and 17 meters from 2300 to 0300. 15 meters may
MDS>be open on some days from 2300 to 0230.

MDS> From Hawaii, 80 meters looks like a good bet from 1030 to 1730z, and
MDS>40 meters from 0900 to 1830. 30 meters looks good from 0800 to
MDS>1930, and 20 meters from 2230 to 2330 and 0400 to 1430. Strongest
MDS>20 meter signals should be between 0900 and 1300. 17 meters should
MDS>be open from 2230 to 0700, and 15 meters from 2300 to 0630. 10 and
MDS>12 meters look quite good over this path, with 10 meters open from
MDS>2330 to 0500, and 12 meters opening 30 minutes earlier and closing
MDS>about an hour later.
MDS>NNNN
MDS>/EX

Ha ha! Well a friend of mine was issued with HIS new callsign 33 years
ago. It was, and still is, "G3POX"! He did not ask for it to be changed,
and in fact says he wouldn't change it if you _paid_ him. He claims,
quite rightly, that at least no-one ever forgets his callsign!!

By the way, more recently, there have been callsigns issued such as
G0OFY, G0PIG, G7PIG, GM7OAF ..... but sadly no G0NAD. Hi Hi!

> Hitler.

Jeff isn't anti-semitic. He's just pro-gun, and proud of it. Before
you decry me as an anti-semite, I am half Jewish and a lot of my
immediate ancestors went into the mass grave at Auschwitz as well.

Jeff, maybe you had better run the Stalin quote instead for a while.

"Ideas are more powerful than guns. We would not let our enemies have
guns, why should we let them have ideas. -- Joseph Stalin"

BTW, Stalin butchered as many people as Hitler. My boss's wife was born in
a Stalin Gulag. He also took away the guns and amateur radio from the
people. So did Hitler. So did Mao. It's a classic pattern for totalitarian
butchers. Take away the right to defend and the ability to pass the
news to the outside world. Then start the killing. Unfortunately, the
use of the Stalin quote will offend somebody. Next, they will complain
that Jeff is a Stalinist.

BTW, Mr. Brandt, I thank you for attempting to take this argument
off line to e-mail.

DO>Jeff Angus is a fine man. All of you who flamed him eat poop.

Maybe we were all mistaken, but we were going by the impression HE
created by his own behavior. The fact that several folks did not
appreciate his nastiness and choice of French, indicates that
his behavior is not acceptable in polite company.

If he is such a fine man, maybe you can persuade him to DEMONSTRATE
this by behaving like a fine man?!

DO>All of you who flamed him eat poop.

I guess you are showing us what a "fine man" you are too!
By the way, my dad can beat up your dad and Jeff's dad,
so there! Nya-nya-nya-nya-nya-nya!

>>
>> Can someone fill me in on the origin of these CW signals:
>>
>> "VVV VVV VVV DE SXA 33 SXA 33 SXA 33 K" on 3.712 Mhz

This question was previously asked and answered in this group a while back.
Here's the "official" answer. The reason I kept this is `cause I spent some
time trying to go back to the SXA 33 station (figured I'm hearing what sounds
like a call followed by K - gotta be a legit call). Given how strong I was
hearing it (559/579), I was wondering why they never answered anybody.

---------- 1st explaination ----------

The station SXA33 is the naval base at Piraeus, Greece. In most instances
the amateur bands are shared with other services and it is against the
regs to contact them (although most operate split anyway).
Traffic beacons like SXA33 both inside and outside the amateur bands are
the best propagation monitors available. Unlike SW broadcast stations,
most of these stations use more reasonable power (1-10kW) and transmit
24 hours a day. Ferrell's Confidential Frequency List by Gilfer Publications
lists most everything regularly heard between 1600kHz and 27MHz both
by frequency and call sign which makes it very easy to ID unusual signals
and figure out where they're coming from.

John - VE8EV

---------- 2nd explaination ----------

It's a Greek Navy station. QTH Piraeus, Greece. Licensed to 3678.0 kHz.
using CW mode.

: One of the intentions of the no-code license was to show people that there
: is much more to ham radio than 2 meter FM and repeaters. Some of the old
: time hams have good reason to beef about the no code license.
: The whole concept of ham radio was devised under morse code. Yes, it is
: very
: antiquated with all the high speed digital communications around us. Yes,
: the
: celluar phone is much more convienient. BUT!! in an emergency situation,
: when all of the high technology is rendered inoperable or destroyed,
: either by enemy forces or by nature itself. That
: $1000 computer and that $1,000,000+ satellite is nothing compared to a
: straight
: key and an HF rig and running good old CW to get the message across. I
: hope that you do indeed go to learn CW and I wish you lots of luck!!

: Jim N2ETE

I understand your point - if there was a disaster to such an extent that
my computer was crapped out and the INMARSAT birds would be space junk,
then we would have to rely on good ol' CW.

As I see it, there are two problems with those contentions:

1. Do you foresee that even SSB would not be used?

2. If all this neat high tech stuff has been blown away or rendered
useless, what are the circumstances that our high tech amateur radioes
would not be subjected to the same stresses and forces and be rendered
useless as well? All that the CW isn't going to help then....

73 and live better digitally

>strategies that you found effective for increasing code speed? (Besides
>copying till your ears bleed, which I'm already doing.) :)

One thing that helps me, and this is pretty much with any study material, not
just code speed, is to put it aside for a day or two every once in a while.
Over a weekend works great. Somehow, this allows you to "digest" what you've
learned and move on. Other than that, get in about half an hour of practice a
day, and keep pushing yourself hard. If you can copy 75-80% at a certain speed,
you should be practicing faster.

I'm currently working on passing the 20 WPM, but I do remember being where you
are.

Sounds a lot like the story that I would tell. Radio is definately a
disease! Good luck. And see you on the air.
I think that what infuriates a lot of the holders of the higher class
licenses is this attitude that some have that the whole ball of wax
should be handed to them. And that some one holding say and Advanced or
Extra is deseved of no recognition at all for there accomplishments. I
always held in revere those who walked before me and still do.

And you will know this as you walk the path.
GC

A simple and effective broadband antenna for the 3.5 MHz band is to
feed an 80M antenna (i. e. tuned to 3.5 or so) in parallel with a 75M
antenna(tuned for about 3.95MHz). Use the same center insulator for both
and run them at righ angles to each other. From above they will look
like an X or a + sign. This tyope of antenna works very well. Last time
I used one, I had less the 2:1 SWR from 3.5 to 3.99999... and including
my old Navy MARS frequency of (semms like it was...) 4.020 or so.

The Internet DX Mailing List - Frequently Asked Questions

Comments or additions should be sent to: lyndon@canada.unbc.edu.

Last updated: February 19, 1995

---

1. Introduction

What is the Internet DX Mailing List?

It is an electronic mailing list dedicated to the discussion of Amateur Radio DXing. This is the place to exchange tips and techniques, discuss hardware (rigs, antennas, DSP add-ons), awards, DX related software, announce upcoming DXpeditions, etc. Anything and everything pertaining to DX is fair game, with the following exceptions:

Don't send requests for QSL info to the DX mailing list. You can obtain QSL information via e-mail by sending a message to qsl-info@aug3.augsburg.edu. Include in the message body the callsigns you want QSL information for - one callsign per line. This service is operated by Ray Rocker (W5QL). Please direct questions or comments to him at rrrocker@rock.b11.ingr.com.

Discussion about contests and contesting should be kept to a minimum. The CQ-Contest list already provides an excellent forum for contest related discussions. (To subscribe to CQ-Contest, send an e-mail request to cq-contest-request@tgv.com)

2. Subscribing, Unsubscribing, and Administrivia

How do I subscribe to the list?

To subscribe, send an e-mail message to dx-request@unbc.edu with the following request in the message body:

subscribe DX

How do I unsubscribe from the list?

To unsubscribe, send an e-mail message to dx-request@unbc.edu with the following request in the message body:

unsubscribe DX

Mail from the list might not cease immediately after you unsubscribe. Due to the way mail is handled, you will receive any messages in the delivery queue (but not yet delivered to you specifically) at the time you unsubscribe. This should only amount to two or three messages.

What about these duplicate messages?

Once in a while it is necessary for me to restart the mail system. If this happens during a delivery run for the mailing list the possibility exists that duplicate messages might escape. The mailer checkpoints it's delivery state after every four deliveries, so if this does happen it will affect no more than four subscribers.

Unfortunately, duplicate messages can also be caused by mailers at the receiving end of the mailing list. I take precautions to prevent error messages and the like from escaping back to the mailing list, but you would not believe the amount of totally broken mail software out there on the Internet these days.

If you receive one or two duplicate messages, ignore them.

If you receive more than one or two duplicate messages, send a message to the list maintenance address. If you can, include both copies of the duplicates with ALL the headers intact. Don't send the messages unless you can include all the headers - I cannot debug the problem without them.

DO NOT send mail about the problem to the entire mailing list! The list subscribers cannot do anything to fix the problem, and have probably figured out for themselves that something is wrong.

Is the mailing list archived?

In a word, no.

How do I send a message to the list?

It's easy! Just send an e-mail message to: dx@unbc.edu. Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day or so, send a message to dx-request@unbc.edu NOT the general submission address) and I will look into the problem.

Here are a few things to keep in mind when sending a message to the list. If everyone follows these guidelines it will help the list operate smoothly.

Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message across.

Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is necessary to establish the context for your reply.

Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air. Anyone violating this rule will be dropped from the list immediately!

If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary list traffic.

Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

Make sure there is something of value in each message you send to the list.

When I reply to a message using my mailer's REPLY command I never see a copy of the message come back from the list. Why?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the "envelope" from address instead of the From: or Reply-To: header values. If your mailer sends replies to dx-request@unbc.edu you are running broken software. If you are in the att.com or microsoft.com domains you want to double check for this second problem. Note that replies sent to dx-request get filed in the bit bucket.

3. Other Related Internet Services

Where can I obtain back issues of the various DX bulletins?

An incomplete archive of DX related bulletins is available via anonymous FTP from ve7tcp.ampr.org:/bulletins/. I add back issues as I come across them. Feel free to contact me if you can help fill in the holes. At some point I hope to set up a WAIS search index that will let you do keyword searches on the bulletins in the archive.

Where can I find out about current solar and propagation conditions?

One of the best sources is Cary Oler's Solar Terrestrial Dispatch. He provides both daily reviews of solar activity and a report of current solar conditions updated every three hours. Sites on the Internet can obtain these reports by fingering the following addresses:

solar@xi.uleth.ca (3-hourly report)
aurora@xi.uleth.ca (hourly auroral activity report)

Connectivity to xi.uleth.ca can be slow at times due to network conjestion. If you are reading this through the World-Wide Web you

may find it faster to access this information via my Amateur Radio
Home Page at http://canada.unbc.edu/radio/.

Lyndon Nerenberg - VE7TCP - lyndon@canada.unbc.edu

Satellite, shortwave and other electronic media news from Radio Sweden.

This week's bulletin was written by George Wood.

Packet Radio BID SCDX2218

All times UTC unless otherwise noted.

EUROPEAN MEDIA NEWS:

EU QUOTAS--As we mentioned last time, the new European Commission has been looking at the issue of quotas for non-European television programming. France has been trying to tighten the directive "Television Without Frontiers", adopted a few years ago, that sought to force European broadcasters to use a majority of European programming, but added a loophole, saying this would only be where practical.

The French suffered a set-back at the recent meeting of European Union Ministers of Culture. But what do European film-makers feel about quotas? Radio Sweden's Jim Downing was at the recent Gothenburg Film Festival, and filed a report, including an interview with fil director Christina Olofsson, who is against quotas and in favor of subsidies to local film-makers to make better European films which can compete with Hollywood.

NORWEGIAN QUOTAS--Norway is not a member of the European Union, and it looks like Norwegian attempts to enforce another sort of quota, on media ownership, may force one of the country's most popular satellite broadcasters to move its uplink abroad. TV Norge, on the Intelsat 702 satellite, is owned by the Scandinavian Broadcasting System, which despite its name is based in

Luxembourg, and owned primarily by the ABC television network in the US. It also runs Sweden's TV 5, or Femman, another station in Denmark, and Belgium's new VT-4 channel.

Norwegian politicians are considering legislation to block a single owner from holding more than one third of a broadcasting organization. While TV Norge's management has denied there are plans to move, there's widespread speculation in Norway this will happen should be ownership law be passed. (NTB)

TV3--There's a precedent--Sweden's TV3, which broadcasts separate Norwegian, Swedish, and Danish services by satellite and cable, is based in London to avoid Swedish media laws. They've suffered a setback recently -- a leading Swedish department store chain has withdrawn all its advertising from TV3, to protest against television violence.

The Aahlens chain says TV3 carries the most violent programming on Swedish television. The channel took its most violent children's program, the American series "Power Rangers", off the air last year, following several incidents of children assaulting playmates in Scandinavia. However, the program returned to the schedule a few weeks later. ("Dagens Nyheter")

TV-SAT--There's been a lot of speculation about Germany's TV-Sat direct broadcast satellite, which has been up for sale. The main rivals have apparently been the Norwegians, who want to place the satellite next to Thor at 1 degree West, the Swedish Space Coporation, who want another satellite with Tele-X and Sirius at 5 degrees East, and Eutelsat, who want to beef up the 13 degrees East position while waiting for the delayed Hot Bird satellite.

According to an item on the Usenet alt.satellite.tv.europe newsgroup, the Norwegians have won, and the satellite began its move from 19 degrees East to 1 degree West last weekend. It's expected to arrive at its new position in mid-March. (Kauto Huopio)

FINLAND--Finland's first local TV station started transmissions last week in Tampere. It is the first regional television station in the Nordic countries, and in his opening address, Finnish Communications Minister Ole Norrback promised franchises for Helsinki, Turku, and Lahti, if the applicants were forthcoming. (YLE via BBC Monitoring and Kauto Huopio)

EUROPEAN DIGITAL RADIO--Last time we started a conversation with Andrew Taussig, the BBC World Service radio's head of broadcasting for Europe, who was here in Stockholm. Britain is expected to become the first country in the world with regular broadcasts using digital audio broadcasting, D-A-B, due to start later this year. But the BBC is also involved in a program with several other countries to carry separate international digital channels in English, French, and German across Europe.

The initial project is between the BBC and counterparts in Germany, France, and the Netherlands. Once the project is running, other European broadcasters will be invited to join in. There's a practical reason for this, the participants want the system to be relayed across the continent, with a

single DAB frequency from northern Sweden to southern Italy. In addition, the EU, which is funding the project, wants all its members included.

A non-DAB pilot program will be airing on the BBC's medium wave transmitter on 648 kHz, which is well received in Brussels. (Andrew Taussig)

EBN--The new European Business Channel from Dow Jones is due to launch on Intelsat 601 on February 27th.

EUROPEAN UNION--Not content with the EBU's Euronews, the European Union has started its own broadcasts on Eutelsat II-F2, on 11.080 GHz. It's in clear PAL. Five subcarriers of the trnsponder, at 6.60, 7.02, 7.20, 7.38, and 7.56 MHz, carry audio to accompany the video in different EU languages. The transmissions are all of EU-related material, including relays of sessions of the European parliament, and news conferences gives by EU officials. The transmissions are on the air at various times of the day. When no events are being relays, a program schedule is displayed. (BBC Monitoring and James Robinson)

ARIANE--After being stopped by a launch failure in December, Western Europe's Ariane satellite launch program is scheduled to resume operations from March 14. Arianespace says a series of 21 corrective measures costing more than USD 8 million have been adopted to ensure the reliability of the rocket. March's scheduled mission will attempt to launch Eutelsat's Hot Bird-1 satellite, and Brazil's Brasilsat B2. A spokesman for Arianespace would not give an exact date, but said the launch was scheduled from March 14th onwards. (Reuters)

DMX--DMX is ready to launch its CD-quality mucis service from Astra in April. Offering 90 channels of themes music, DMX anticipates that relatively few satellite TV enthusiasts will take the service at first. Consumer receivers, made by Technisat and Kathrein in Germany, will cost in Germany around the equivalent of GBP 200, but should fall to around GBP 100 when the market has matured. The service will cost around GBP 7 a month. ("What Satellite TV")

EUTELSAT--Eutelsat says its sold all 20 transponder leases on its Hot Bird 2 satellite, due to launch in August, 1996. ("What Satellite TV")

QVC--Which we've previously reported would be leaving the Sky Multichannels package and switching to clear PAL, has changed instead to soft Videocrypt encoding. Like UK Gold and Sky Sports previously (but no longer), this means that anyone with a Videocrypt decoder can watch the station, without a BSkyB smartcard. ("What Satellite TV")

GERMANY--The media authorities in Frankfurt have issued five licences for new TV channels in Germany. They have been awarded to new music channels Viva 2 and VH-1 Germany, FAB (Fernsehen aus Berlin), the family channel Super RTL, and TM3, the third channel from Tele Munchen. So far none of the new channels that have booked space on Astra 1D have been awarded licences. This includes Kabel Plus and the shopping channel HOT.

Viva 2 is believed to have secured the Eurosport transponder on Eutelsat II-F1 which will be vacated when Europsort moves to the upcoming Hot Bird satellite. Super RTL will occupy channels on Hot Bird and Astra's transponder

13 when RTL vacates for Astra 1D. ("Tele-Satellit")

Despite a report that the German VH-1 will be using the evening time on Nickelodeon's transponder 46 on Astra, there's nothing there yet. It's worth keeping an eye on it, along with the other vacant Astra transponders.

DEUTSCHE WELLE--Dieter Weirich, director of Deutsche Welle Radio and TV International, announced at the Intersat 95 trade fair in Frankfurt that Deutsche Welle will launch a 24 hour international TV channel in German, English, and Spanish from July 1, 1995. (apparently expanding the current Deutsche Welle TV in those three languages, and squeezing the USIA's Worldnet off the transponders, just as France's TV5 did a couple of years ago). (ADN via BBC Monitoring)

TV ASIA/ZEE--Astra broadcaster TV Asia has dealt with its first serious potential competitor by merging with it. Last December Zee-TV, broadcast to India over Rupert Murdoch's Star-TV, and partly owned by Star, announced it would start a European channel this March. TV Asia has responded by merging with Zee-TV. ("What Satellite TV")

ASIAN MEDIA NEWS:

IRAN--Iran's Council of Guardians, a body responsible for endorsing the approvals of the Majlis, on February 15 endorsed a law banning the use of satellite dishes and equipment. Satellite dish owners will have one month to turn in their equipment or pay fines ofup to USD 740. Over the past few years, hundreds of thousands of Iranian households, bored by state television, have installed satellite dishes, which are smuggled into the country. Supporters of the ban say satellite dishes are the spearhead of a "Western cultural invasion". Opponents say the government should first supply alternative entertainment. (IRNA via BBC Monitoring and Reuters)

ISRAEL--Israel TV's channel 3 began full-time broadcasting on satellite and cable on January 22. It can now be received in most of the Middle East, the Gulf, and North Africa. (BBC Monitoring) Presumeably the satellite in question is Intelsat 702, which carries three Israeli television channels. Channel 3 is listed on 11.023 GHz.

APSTAR--A pro-Chinese newspaper in Hong Kong has claimed that the recent loss of the Apstar-2 satellite was due to a failure within the satellite, and not the Chinese Long March rocket. China made similar claims when Australia's Optus satellite failed to achieve orbit in 1992. Later in the week the newspaper backed away from the claims, saying only that the investigation was continuing. Shortly after the crash, the same newspaper had claimed that sabotage from foreign tracking stations was responsible for the failure, in order to cause a loss of confidence in the Chinese space program. ("Tele-Satellit" and Reuters)

Despite the Apstar failure, MTV Asia plans to launch new channels in April and May, using current capacity on four existing satellites. Meanwhile, another Apstar broadcaster, Asian Business News, has now booked a transponder on PAS-4, due to be launched in mid-1995. ABN, owned jointly by Television New Zealand, Dow Jones, Singapore's SIM, and cable giant TCI, is currently on

Indonesia's Palapa P2 satellite. Ted Turner's TNT and Cartoon Network, scheduled for Apstar-2, continue to broadcast on Apstar-1. (Reuters)

TVB--Britain's media group Pearson has bought 10 percent of Hong Kong's Television Broadcasts, TVB, the world's leading producer of Chinese language drama, and a potential rival to Rupert Murdoch's Star-TV. TVB's plans to expand into South Asia have been temporarily halted by the failure of the Apstar-2 satellite, but Pearson has also secured an agreement with a local broadcaster in that region to start a TV channel soon. ("Tele-Satellit")

JAPAN--NHK is to launch a gloval TV service via satellite. By using the TV Japan services for North America and Europe, this will mean a five hour program to North America and three hours to Europe, free of charge. From 1996 onwards, NHK's plans include expanding broadcasting hours, and launching a similar service to Asia and the Pacific in 1998. (Radio Japan via BBC Monitoring) Is this a reference to the Japanese service on Astra, JSTV? It is hardly free, except for immediately after the Kobe earthquake when JSTV commendably dropped its coding.

NORTH AMERICAN MEDIA NEWS:

USA--The Federal Communications Commission has announced the award of spectrum located between 2310 and 2360 MHz for the creasion of a "direct-to-radio" satellite broadcasting service. The Digital Aufio Radio Swervice (DARS) will deliver CD quality radio to the public. While four companies have applied to provide the new service, it is expected that a challenge from the National Association of Broadcasters will delay any start-up for at least two years. ("Dishcetera" via Curt Swinehart)

CYBERSPACE:

USA--A third American college radio station has begun broadcasts over the Internet. This is KUGS at Western Washington University in Bellingham. Information about the station can be found at:

http://www.pacificrim.net:80/~kugs

Another college station, WREK at Georgia Tech, is preparing to launch on the Net. The URL seems to be:

http://www.gatech.edu/wrek/wreknet_tech.html

(Pete Costello, who's Shortwave/Radio Catalog can be found at:

http://itre.unceces.edu/radio)

EUROPE--Wildfire, the service reported last time that intends to transmit the Usenet newsgroups to Europe using the blank lines on an Astra transponder, has the URL:

htt://www.tecc.co.uk/wildfire/index.html

They write: "Each user will need to purchase our receiver/ decoder unit which is an internal PC card. This will be available throughout Europe. Our target end user price is around GBP 50 - 80, inclusive of VAT (17.5%) and UK

postage. Prices for other systems will be similar when they are available, with the exception of the external RS232 box which will be considerably more. It is intended that the receiver will be sold for close to cost price, to encourage take up of the service

"In addition to this each user will need to take out a subscription to receive the service. This pays our satellite transmission costs (our largest cost), and enables up to provide support in an ongoing basis. The subscription will be around GBP 8 - 10 per month, and this will include the user receiving as much or as little of the service as they wish.

All users will of course need a normal Internet account (for sending news and for using interactive services), and a satellite dish and receiver...Note that the dish and receiver is not dedicated to use with this system, it can be used for watching TV at any time other than when we are 'on air'." (Wildfire)

Sweden Calling DXers/MediaScan is the world's oldest radio program about international broadcasting. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948. It's currently broadcast on the first and third Tuesdays of the month.

Radio Sweden broadcasts in English:

Europe:

17:15 hrs 1179 and 6065 kHz
18:30 1179, 6065, 9655, and 13690 kHz (also Africa/Middle East)
21:30 1179, 6065, and 9655 kHz (also Africa/Middle East)
22:30 1179 and 6065 kHz
23:30 1179 kHz

Asia/Pacific:

12:30 hrs 13775, 15120, and 15240 kHz
23:30 11910 kHz
01:30 9895 and 11695 kHz

North America:

13:30 and 14:30 hrs on 11650 and 15240 kHz
02:30 and 03:30 hrs on 6200 and 7120 kHz

Latin America:

00:30 hrs on 6065 and 6200 kHz

The broadcasts at 17:15 and 18:30 hrs are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) via TV5 Nordic at 12.475 GHz, audio subcarrier 7.38 MHz.

Radio Sweden is also relayed to Europe via the World Radio Network on VH-1's transponder 22 on Astra, audio 7.38 MHz, daily at 20:00 hrs UTC.

Radio Sweden can also be heard on WRN's North American service on Galaxy-5, on WTBS's transponder 6, audio 6.8 MHz, daily at 00:00 and 20:00 hrs.

Sound files of Mediascan are archived at:

ftp.funet.fi:pub/sounds/RadioSweden/Mediascan.

If you access to the WorldWide Web, you can also find the programs among the offerings of Internet Talk Radio at various sites, including:

ftp://town.hall.org/radio/Mirrors/RadioSweden/MediaScan

The World Radio Network is also available live via the Internet MBONE. Check:

http://town.hall.org/radio/wrn.html

Contributions can be sent to DX Editor George Wood by fax to +468-667-6283, via the Internet to wood@stab.sr.se, from MCI Mail or CompuServe to the CompuServe mailbox 70247,3516, or to SM0IIN at the packet radio BBS SM0ETV.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

I thought they were the initials of the 3 guys that designed it. N went
on later (or maybe earlier) to make the N connector and C also had
an independant career with the C connector. As to their names - sorry
don't know.

>IT UP on the written!).
>
>Mike, KK6GM
>
Why don't you just do what I did? When I took and passed the no code tech test
I went on to take and pass the general written. I had not studied for the

general at all. It can't be too hard or I wouldn't have passed it. Now I may be a stupid no-code tech but I have passed the SAME test as a general. Now I have a real insentive to pass the code at 13 wpm instead of 5. Oh yeah, I'm going to study for the general even though I passed because I feel like I don't know enough to be a good operater. It seems like about half the people on this newsgroup have good healthy positive attitudes and the other half just want to gripe. The positive half have encouraged me to want to progress to extra, not because I have to, but because I want to. Just for the fun and personal satisfaction. People like Gary Coffman and others are what is best about amatuer radio. The no-code licence has gotten more people into ham radio than anything else in the last 30 years. Some of these people want to go all the way, others are happy on 2 meters. Why not? We need all the votes we can muster to protect our amatuer privileges. Thats my .02 worth.

FT-51R MOD Sheet:

OK, here's the first one I found, gives you rx/tx 140-174 MHz and rx/tx
420-470 MHz:

1. Remove the battery pack from the radio.

2. Remove the four screws directly beneath the battery pack on the radio.

3. Remove the two screws holding the contact portion of the battery compartment

4. Remove the screw and battery pack release lever.

(the following steps make removal of the battery holding compartment easier)

4. Remove the four screws on the bottom portion of the back of the
cabinet. Carefully remove the two halves of the radio. Pay attention to
the gasket as you are seperating the cabinet.

5. Remove the battery pack holding compartment.

The section you will know be working with is directly underneath the
battery pack holding compartment (behind the touch tone pad).

6. There is a ribbon cable connected to the control board. You can leave
the ribbon cable attached if you're a GOOD solderer, or you can release
the two little black levers on each side of the ribbon cable and CAREFULLY
slide the ribbon cable out of the socket and hold it back towards the case
with a piece of tape. Be careful not to put a bend in the ribbon cable or
pierce it.

7. Locate a set of etched jumpers on the pc board. They are located
adjacent to the bend in the ribbon cable. They are not marked, and are
situated as follows (o-o indicates closed, o o indicates open):

JP1001 o-o
o o JP1005
JP1002 o o
o o JP1006
JP1003 o o
o-o JP1007
JP1004 o-o

8. Using solder wick or your preferred method of solder-removal, carefully
remove the jumper for JP1007. This enables the 134-174, 420-470 MHz
transmit.

9. Reassemble the radio, remembering to reinstall the gasket, and to
carefully reinsert the ribbon cable if you removed it from the socket, and

fasten down the little black socket locks.

10. Press the MHZ /\ and MHZ \/ buttons simultaneously while turning the power on to the radio. This enables the modification.

mack@ncifcrf.gov (Joe Mack) writes:

>I thought they were the initials of the 3 guys that designed it. N went
>on later (or maybe earlier) to make the N connector and C also had
>an independant career with the C connector. As to their names - sorry
>don't know.

Actually, it was two guys: Neill and Concelmann. They developed
a series of connectors, at least some of which were:

N - "Neill" connector
C - "Concelmann" connector
BNC - "Bayonet Neill-Concelmann" connector
TNC - "Threaded Neill-Concelmann" connector

As an interesting side note, since the connectors were all developed
by the same engineers there is a certain mount of "compatibility;" for
example, a type N male will plug into a BNC female since (a) the center
pins are the same size, and (b) the OD of the Type N inner sleeve is the
correct size to plug neatly into the ID of a BNC female. Try it sometime!

BTW, this "what is the origin of BNC" was the subject of a lengthy,
exhaustive (exhausting?) thread on sci.electronics back several months
ago. Sorry, I didn't save all the relevent history regarding who the
two guys worked for (I think it was Bell Labs, but that's just a guess);
the time frame during which the connectors were developed, etc., but
other translations aside, everyone pretty much agreed that originally
the letters N and C stood for the two developers.

Besides, if BNC stood for "British Naval Connector" or anything
else with "connector" as the third word, then referring to a "BNC
connector" would be redundant. ;-)

I couldn't agree more and hope that this echos the sentiments of most people in radio. There are so many things to do regardless of license class. I think I have tried about all the different mode and types of operation...from traffic handling to contesting. Currently enjoying learning about satellite operation which doens't require a General or above license, but is plenty complicated. HF is fun but it isn't the ultimate. It seems that whatever you enjoy is the best...after all, it is a hobby.

Source record: 251784

jimkd0av@aol.com (JimKD0AV) writes:

>The major advantage that I have found with cw is that it allows u to
>communicate easily with minimum power and modest equipment.

Certainly, that is an advantage, and even with "modest power" one can do a credible job on HF virtually anytime except during a SID (sudden ionospheric disturbance) which wipes out all the bands. At any given time of day, some HF band is open to somewhere other than just across town. And, there never seems to be a dearth of operators willing to engage in a CW QSO.

Another *attraction* for me is operating under conditions where there is heavy QRM (such as during this past weekend's ARRL DX Contest) which requires a certain amount of practice and development of "selective hearing" (or, more properly, "selective comprehension") by "focusing" (wrong term for an audible skill, I know) on a specific signal to the exclusion of others only 100 Hz (or even less) away in pitch. I've enjoyed developing this skill (if it is truly a skill) and enjoy using it under "adverse" conditions (contests, pileups, noisy conditions, etc.) to snag new countries. Note that this is an *attraction* and not a particular *advantage*. And no, I don't have a DSP filter on my HF rig, just 500 Hz CW filter and a PBT which can screw it down to somewhere between 250-300 Hz. Anything after that uses the continuously-variable selective filter mounted between my ears. ;-)

However, what *I* like is not necessarily what *others* like, and in this age of digital communications I'm not sure that *requiring* someone to learn CW is relevant. In fact, I'll bet that there are some CW lovers whose real objection to "no-code" is based on a subliminal fear that, once code is no longer a *requirement,* code itself may be outlawed, like "spark" was. But spark was outlawed because it was wasteful of bandwidth and created massive interference problems, so *my* belief is that even if the code test requirement is ultimately done away with, the use of code will still be permitted as long as the transmitted signal meets appropriate purity and stability rules (none of which have anything whatever to do with one's code ability).

Were the code test requirement done away with, we'd probably see a lot of "code appreciation" groups springing up which would have special contests for code lovers, offer proficiency tests and certificates to encourage code participation (just like the old "Satellite DX Achievement Award" which encouraged people to try OSCAR 6 & 7 back during the '70s), etc. So it won't die for a long time, code test requirement or not. In fact, when it's no longer a requirement it may suddenly become an "in" thing to do, sort of like

"keeping alive an ancient skill."

Among the equipment I have is a Yaesu FT-23R.
It was modified at the time of purchase about 8 years ago for
extended TX.
I see now that the new FT-51R has secrete "soft modifications"
which aren't in the owners manual.
Was there any modifications available for the FT-23R
I am not familiar with, or is the extended RX and TX the only one?

Thanks,
Dave

|>>
|>>> I disagree. I think it would matter a great deal. Much (most?) of what
|>>> is taken as anti-no-code feeling is, I believe, anti-no-theory
|>>> annoyance. In my case, I have only a weak attachment to CW as a test
|>>> element, but strongly believe that any ham with "full Extra privileges
|>>> above 30 MHz", as someone oddly put it recently, should have some idea
|>>> what's going on inside their Yaecomwood.

I forgot to mention this before, but what does "full Extra privileges above 30 MHz" mean? Only novices don't have full VHF+ privileges. Why not say "full Technician..." or "full General..." or "full Advanced..."? Would adding part 3B to the technician class tests suit you better? Maybe it should be called the no-code general license then? ;-)

|>>>
|>>And to Michael S, what does that have to do with the no code technician
|>>license? That argument is a condemnation of all the written tests
|>>and has absolutely nothing to do with one class or another. Or are you
|>>suggesting that elements 2 and 3a have some how become coorespondingly
|>>easier than elements 3b, 4a, and 4b?
|>>
|>The Tech License is the only license that has undergone two requirement
|>reductions (reduced written requirement in 1987 and elimination of code test
|>in 1991). The privileges relative to the effort/knowledge/skill required
|>are now out of all proportion to the other classes of amateur license. This

Just to clarify the record, in 1991 when the code requirement was eliminated, so were a corresponding set of privileges.

|>is not about no-code, nor is it Tech-bitching. It *is* an opinion about
|>standards, about the reasons and licensing requirements for an amateur radio
|>license. I can think of three ways to bring the Tech test back into line
|>with the rest of our license classes: (a) Reduce Tech privileges (never
|>happen), (b) Make the test tougher (question: why was the code
|>element simply *eliminated* instead of being *replaced* by an element
|>covering more VHF-relevant material?), or (c) Limit the Tech to 5 years --
|>welcome the newcomer with the Tech windfall, but require in return one
|>little upgrade after five years (and toss out HF code if you like, but MAKE
|>IT UP on the written!).

Again, I believe this has very little to do with the technician class license and could equally apply to most (all?) other classes. Plus if you think making the technician class license include part 3B is going to solve the problem, then I think you are incredibly naive. People learn and remember what they use. I knew calculus and how to solve differential equations 20 years ago. But since the last differential equation I solved was in a class I took 20 years ago, I can't say I remember how to do it now. The same is true with amateur radio. What part of their Yaecomwood would you like them to understand? The microprocessor control circuitry, the built in keyer circuitry, the CMOS fabrication technique used to build the chips, the soldering technique used for surface mount devices, the power amplifier circuitry? I hold an advanced class license and I'd be hard pressed to give you a lot of details about the insides of my modern HF/VHF transceiver.

Think about how much has changed in electronics over the last 40-50 years. Also think how much broader the amateur radio service is. Instead of one electronics technology to master (tubes) and 2 modes of operating (CW and phone), we now have many many more options and things to learn. Which of those areas would you have the perspective technician learn?

Please note, I agree that the current tests are somewhat lacking, but it's not just not part 2 and 3a that need work. Without studying I came within one answer of passing 4b and I studied all of an hour for 4a. I'm no god's gift to radio theory, but I know how to take tests. And in general, the current tests test your ability to take tests and not a whole lot more. Fix that problem first. Although even then if amateurs don't use the information they'll lose it. Harder tests won't make people use the information they learned. Only interest or need can do that.

Finally, what do you hope to accomplish by making the written tests harder? How will that change the amateur radio service? Can you measure that change so you'll have some way of knowing that the harder tests indeed have the desired effect? Is there some defect in the amateur radio population that you believe will be cured with a harder written test?

73,
Todd

This Week in Amateur Radio Celebrates Edition #100

"This Week in Amateur Radio", North America's satellite-delivered amateur radio news and information service, celebrates its 2nd Anniversary this Saturday, February 25th, at 7:30 PM EST, with the airing of Edition #100. Along with the program's regular weekly features, host Stephan Anderman, WA3RKB, will anchor numerous live telephone call-in segments throughout the program. Calls will be accepted at 518/664-6809 to discuss amateur radio topics such as the new vanity call sign program; new amateur frequency allocation activity at 219, 902, and 2400 MHz; FCC reorganization and regulatory activities; or whatever comes to mind.

Originally known as "Amateur Radio Weekly" and first carried on the Spacenet III commercial satellite from southern California, production of the program moved to central New York in February 1993 when it was renamed "This Week in Amateur Radio". It was taken over the following month by the current production group and went on the air with a new, expanded format from the Albany, New York area on March 7th, 1993. The show went on a four-week hiatus during December 1993 in a transition from S3's "Let's Talk Radio Network" to the Galaxy III satellite and the new "Omega Radio Network", which features communications hobby programming. "Omega" and "This Week" moved to AT&T's Telstar 302, transponder 21 (11V), 5.8 MHz audio (4.120 GHz) earlier this month. T302 is located at 85 degrees west longitude in geosynchronous orbit.

"This Week in Amateur Radio" is produced by Community Video Associates, Inc., a New York not-for-profit corporation, and heard on nearly 100 amateur VHF/UHF repeaters throughout the United States and Canada, as well as nightly on the Gateway 160 Meter Net, WA0RCR, at 1860 kHz. Production, transmission, and maintenance expenses are underwritten entirely by contributions from the amateur community and program affiliates.

For further information, contact George Bowen, N2LQS,
(InterNet: KXKVI @ DELPHI.COM) or Stephan Anderman, WA3RKB, at 518/664-6809.
You may also reach them via amateur packet @ WA2UMX.FN32CR.ENY.NY.USA.NA.

I was in about the same position not too long ago, not being a new ham but a bit of a Rip Van Winkle ham. I started with an HT, the Kenwood TH22AT ($225 new). I thought it would serve all my purposes -- HT, mobile, packet, whatever I wanted. I've been very happy with it as an HT, but it has its limitations in the car. The main one is audio level. It's just not quite loud enough to make it over the road noise. Also, when I connect it to an external antenna, it gets a fair amount of intermod. (I live near downtown Austin, TX.) I got a little amplifier to cure the low power problem and an external speaker/mic, but the audio was still too low and it was very inconvenient to hook up an audio amp. (I need a three conductor subminiature jack and can't find one.)
So I recently bit the bullet and picked up a mobile rig. I got a Yaesu FT2400H ($250 used), and I love it. I have a gain antenna on the roof and I *never* get intermod. I really wanted to go with a dual bander, but everyone I talked to complained about the intermod. (They make the receiver front ends wide open for extended receive and that makes them suceptible to intermod.)
Now I use the HT as an HT and it's great. (I'm brand new to packet so the jury is still out.) The mobile is great too. I'd suggest you decide which you want more -- handheld or mobile and go from there. I've heard lots of great things about the HTX-202 from Radio Shack -- check it out too. I'm going to wait for the next generation of dual banders... 73, Robert WD5AAT

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.
```

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (10/94)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Send Questions to the Newsgroups, Not the Editors (9/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)

Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)

University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

2310. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

>>: woman had to take her no-code tech test twice. So I assume the VE's can
>>: keep on giving you tests until you pass. Doesn't this defeat the purpose
>>: of the test? Discussion anyone?

Our VE team in CT keeps one version of each element and does not
give repeats of the same element on the same day. This was decided
by the team and works well for us.

>When I ran the ARRL VE in Alamogordo, New Mexico I kept enough exams for
>each element on hand that it was conceivable to test someone not only
>twice but up to six times and without ever having to take the same exam
>twice. I kept track of which exams were taken so that in subsequent
>sessions you wouldn't even get an exam you had taken before.

this is within the abilities of the VE team under the current rules.

>It really doesn't make sense to test someone more than twice in the same
>day but if the exams are available, each team member agrees, and if the
>candidate wants to plop down another fee why not? Now if someone fails
>an exam miserably, I suggest that person go home, do some more studying,
>and then come back to another session.

and this is the approach most teams take, but the decisipon is made
before hand and is not made on a case by case basis.

The small amounts of flexibiliry given to the VE teams make for a
more interesting system and even if there was no flexibility, people
would still be griping.

Hi Bill,
Your comment reminds me of what I said on here more than once last year:
Most VHF-folks would consider their radios useless if suddenly all the
repeaters were shut off. Few realize the value of erecting a good
antenna and communicating via simplex.

Of course, simplex is not possible with a cell phone so your comment
above does not preclude the possibility of hams continuing to
communicate without a repeater.

ID>Us Xer's don't need no stupid code. The sooner you oldtimers die and
ID>turn to dust, the sooner we can run the bands the way they should
ID>be ran! Gen. X Rules!

You may not need code, but if all "Xer's" are like you a course in
remedial English might not hurt. If "Xer's" rule with this level of
intelligence, the future won't be any different than the past.

I have seen the "Xer's" and I ain't impressed.

Rich

IJ>Let us give NO-code some credit.

John,
I think you'll find most Hams will judge an operator on his or her actions, not on some arbitrary license classification. As most of us know from 14,313, jerks come in all license classes.

Enjoy your license and, as long as you obey the rules, you have no reason to apologize or explain to anyone.

Rich

2328. Is there still a foreign stamp service?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-22 23:46:56 UTC
From: marxj@doa.state.wi.us
Message-ID: <3igidg$igk@doa-news.doa.state.wi.us>
Source record: 251825

I'm not an amateur, but I hope someone can help. There used to be a service for hams that sold current issue foreign postage stamps to help hams get replies to QSLs. I need some Irish stamps and would like to see if they can help me. Does that organization still exist and, if so, how do I contact them--a phone number would be helpful, too. Please reply to Marxj@mail.state.wi.us Thanks!!!

Silent key

Howard John Freeman VK2NL passed away suddenly on Friday 17th February 1995.

Howard was born in the south of Wales, United Kingdom, on 6th February 1923. He joined the Royal Air Force at 18 years of age, and served in various roles including aircraft and radar operations from 1941 to 1946. In 1947 he joined the Civil Aviation Authority as a Senior Flight Officer.

First licensed in Australia in 1948 as VK2APF, Howard then went overseas in 1953 and served in many countries including Kenya, India, Malaysia and the United States. On returning to Australia in 1965 he returned to the bands with VK2BHF, before obtaining his final call of VK2NL in 1968.

In 1963 he joined the NSW Bushfire Service and rose to head the Service's Communications section before retiring in 1983. In 1968 he was granted a Freeman of the City Of Wollongong for services rendered during bushfires threatening that city.

Howard served on the Council of the NSW Division Of the Wireless Instute of Australia in 1974 and 1975. As NSW's WICEN Coordinator from 1974 to 1982 he rebuilt the then defunct organisation and set the foundations for WICEN's future.

Apart from devotion to his family and the community, Howard's interests ouside Amateur Radio included aviation, motor cars and jazz. Howard is survived by two sons, Mark and Peter.

VK2 Div President's message

This is Michael Corbin VK2PFQ

Today I intended to be sweet brief and to the point. Reason....I spent all day yesterday along with some very very willing workers painting the Parramatta downstairs office in preparation for our incoming tenant. Thanks go to these Amateurs who gave unselfishly of their time thus avoiding the need to pay out money to Contractors. Money saved on contractors fees.... Perhaps around $2000.00....Not bad eh!

Those responsible and deserving of our thanks are Max Bowie VK2AFE, (I think Max spent every day at the Institute this week) Dr. Tony Farrow VK2TJF, Eric Fossey VK2EFY, Pat Leper VK2JPA, (Pat took the Video and Provided her Scaffolding) Cesar Miranda

VK2TCM,(he also spent a couple of days at the office this week), Richard Murnane VK2SKY, Peter O'Connell VK2EMU, Michael Walton VK2MJ. unfortunately Clive Robertson was unwell and therefore did not attend. Fans don't worry he will be at the Wyong Field Day...No, No name card .... You'll recognise him quite easily. Those of you who don't know him.... If indeed there are any such people....Just look for the bloke wearing the yellow carnation.... (Script reads here ... give large grin ... Blink several times ... Look towards microphone ... Who writes this stuff???). Just kidding Clive!!!

Another group which deserve our thanks is the Veterans Amateur Radio people. You'll recall that I jokingly suggested last week that I might get this group to help us with the preparation and folding of copies of the VK2 submission, well Franklin, the Veteran in chief, called in after the Broadcast and offered to help.....Since I was not overwhelmed with offers from anyone else I took up their offer. Sorry fellas I left the list at the office. Since I cannot recall everyone's callsign. I'll mention them next week so as not to leave anyone out... In the meantime.....THANKS!

Next weekend there will be no SUNDAY MORNING Broadcast...WHY? Because its WYONG field Day weekend. The Broadcast I am told is not held on the morning of Wyong field day weekend.....The Sunday night Broadcast time have not changed. Anyhow that will give us more time at the Institute to prepare for the Field Day.

You know it's probably 40 years since I have attended one of these Field Days. When I was a kid attendance at all thing Amateur radio was COMPULSORY..... Since your Dad was VK2YC The President of the WIA you went where he went... So did your Mum and so did the rest of the kids of the Corbin family... I can tell you I used to hate it. The only thing I EVER liked going to was the Woy Woy field Day.... That, for you youngsters out there in Amateur Radio Land, was the forerunner of the Gosford Field Day... I recall a bloke Major Collett was mixed up in things in those days. I cannot remember what he looked like... Although I recall that he was a somewhat distinguished looking chap. I can remember his wife ..... She wore her hair in a Bun, which of course was the fashion in those days... She had that "No nonsense" air about her which struck fear into kids of my age...Anyhow us kids loved to go to these Field days because we got FREE soft drinks....Mangans I think was the brand name...And ... PENGUIN Ice Cream.... Ah yes Penguin's Ice Cream and it used to come in BUCKETS with a little wooden spoon....Some years, if you were Lucky, there seemed to be lots and lots of ice cream left over...You went home FULL... AH!!! Oh! yes...and there were also those Lucky Dips....I still have one of those silver painted valves with an arrow and "D D" stamped on it that I got in one of those lucky Dips... I could never understand why grownups would get excited about getting those funny long brown things with a couple of terminal looking things on the end of them.... It seemed to me at the time that they got excited. Anyhow I remember the year that I got one of

these ... All the Hams seemed to think that this was GOOD??? GREAT???
Myself I was not really sure.... I wondered ... what was inside one
of these things. I determined to find out..... With words like.
"You'll need one of those one day"... or ... "That"ll come in
handy???" I crept outside early that same night ... Selected a
suitable Blunt instrument and hit this BROWN thing ONCE TWICE and....
well what was all the big deal about... all I could find was a lot
of very fine wire inside this THING and I had been lead to believe
that these things were .... Most sort after???. No wonder I was not
interested in Amateur Radio in those days. In case your wondering
what this thing was, it was of course a resistor But looking
back....Those WERE the days......I wonder if they have lucky dips
at Wyong these days??? Anyone who would like to talk about those
olde days. I'd love to meet you at the Field Day. Wal Nighe that's
another name .... Drove us up to Woy Woy in an old, although it was
not old in those days, Grey Chevoret.....Hmmmmmmmm!!

The WIA WILL have a stand...All your Councillors will be in
attendence....Come and make yourself known to us. 1995 Callbooks will
be on sale .... Technical Books will be available....

See you there......I'm looking forward to seeing what a Field Day looks like
after 40 Year

News briefs

Support for our case against fees increase

David Thompson VK2BDT has sent us a clipping from the Goulburn and
District Magazine that highlights our battle aginst the amateur
fees hike and from which we quote:

" Increases of up to 100 per cent in Amateur Radio Licence fees
have been strongly opposed by Federal Member for Hume and Shadow
Minister for Transport, John Sharpe. Amateur radio users provide
an invaluable service in times of disaster such as bushfires,
floods and earthquakes, at little cost to the community. This
voluntary service is in danger of being lost, or at least
downgraded, because of the increase. The Coalition recognises the
value of their service and will oppose any moves by the Government
to approve the increase."

The news item is an excellent example of the publicity the
amateurs can gain through our local and regional papers and is
one of many the Divisional office has received from members in New
South Wales and interstate. The threat of the fees increase is a
good incentive to publicise our case and gain support. After the
fee issue reaches its conclusion, for better or worse, may we
suggest that we amateurs maintain our contacts with the media to
keep Amateur Radio in the public eye.

WICEN News

Hunter advise that their first meeting for the year will be tomorrow, at the Emergency Operations Centre, on the corner of Elizabeth and Hannell streets, Carrington, starting at 1900, and thereafter on the third Monday of each month. Do other regions have any regular meetings?

The major event this month is the Central Coast Amateur Radio Club Field Day, at Wyong Racecourse, on Sunday 26th February. As usual there will be a WICEN stall next to the Caravan, and people, in uniform, are requested to help staff it for an hour or two from 1000 to about 1500; this is an important "PR" exercise, as we sign up many new members at this event. Please contact Alan VK2YYJ if you can help, during tbe day on (02) 839-1388, or via packet radio at VK2CZR.

Events next month include the "RTA Big NSW Bike Ride" from the 4th to the 11th of March for which the current contact is John VK2AMH, and the annual Bungonia Cave Rescue on the weekend of 18th-19th March, and Mark VK2XGK is looking for volunteers who won't necessarily have to go underground; Mark can be contacted at work on (02) 936-8689.

A major event in April is the Oberon Car Rally on 29th April, and about 20 people are required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural report

Here again is another report on activities at the Dural broadcast station.

Work at Dural last week saw the installation of the transnmit and link antennas for the 6m repeater, and extra wiring for a battery backup system. Unfortunately, wind gusts meant it was unsafe to realign the bent antennas, so this will have to wait for another time. Thanks go to Peter VK2XZP for climbing the tower, and Tony VK2ZLT for grovelling underneath the building.

A plea for more "807" transmitting valves resulted in donations from Alan Peake in South Australia, and Mick VK2ZQM; thanks go to both of them.

A donation of a complete FM-828/E base station from Cockatoo Island was made, and it is possible that this unit may end up as a packet radio service at Dural.

Finally, don't forget that due to the Wyong Field Day next Sunday the usual morning broadcast has been cancelled; the Sunday evening broadcast will be as usual.

--Dave VK2KFU Dural Engineer

Central Coast Field Day

Now's the time to put aside Sunday 26th February - that's just one week away - for a trip to the Central Coast to visit the Annual Central Coast Field Day. The Field Day has something for everyone. There are traders galore, selling new and second-hand equipment, interesting technical lectures and workshops, special interest groups and displays, fox hunts for those with a competitive spirit, bus trips for the family, and a chance to meet people who you may not have seen for years or have only ever worked on the radio.

More than 2,000 people come from far and wide and this year as in past years there will be many international visitors.

The Central Coast Field day is held at Wyong Racecourse, just five minutes from Wyong Railway Station. The Racecourse provides an excellent venue with under cover display area, Bistro and food facilities and ample car parking within the grounds.

Two entry gates will be in operation this year to avoid the traffic congestion that has occurred in the past. Gates will not open until 8:30 a.m., and this includes entry for Flea Market traders.

An information service will be provided on the Central Coast 2 Metre Repeater 146.725 MHz using the call sign VK2AFY on Saturday 25th and the morning of Sunday 26th February.

Admission is $8.00 for adults, $5.00 for pensioners and Seniors Card holders and children under 12 are admitted free.

Further information can be obtained by writing to the Field Day Committee, Box 252, Gosford, NSW, 2250, or via Packet to VK2AFY @ VK2EHQ. Telephone enquiries can be made by phoning (043) 40 2500.

See you at the Central Coast Field Day on 26th February.

Bob Fitzgerald, VK2XRF
CCARC Publicity Officer

IPS Report

IPS WEEKLY REPORT
---
10 - 16 FEBRUARY

DATE OF ISSUE: 17 FEBRUARY 1995

INDICES:

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT MUNDARING NEAR PERTH WAS QUIET ON 10TH FEBRUARY, UNSETTLED TO ACTIVE ON 11TH; ACTIVE ON 12TH; MOSTLY ACTIVE ON 13TH WITH MAJOR STORM LEVELS 1200 TO 1500 UT. ON 14TH FEBRUARY THE FIELD WAS UNSETTLED TO ACTIVE WITH MINOR STORM LEVELS 1200 TO 1500 UT; AND QUIET TO UNSETTLED ON 15TH-16TH WITH BRIEF ACTIVE PERIODS.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR PRE-DICTED MONTHLY VALUES 10TH, AND AGAIN ON 11TH UNTIL LOCAL NIGHT WHEN ENHANCEMENTS OF UP TO 30 PER CENT WERE OBSERVED, FOLLOWED BY DEPRESSIONS OF UP TO 20 PER CENT AFTER LOCAL DAWN. FREQUENCIES WERE DEPRESSED BY 15 PER CENT ON 12TH; MOSTLY NEAR PREDICTED VALUES ON 13TH, WITH SHORT SLIGHTLY DEPRESSED PERIODS; AND NEAR PREDICTED VALUES ON 14TH. FREQUENCIES WERE AGAIN DEPRESSED BY UP TO 20 PER CENT IN THE FIRST HALF OF THE UT DAY ON 15TH FEBRUARY; AND NEAR PREDICTED TO 20 PER CENT ENHANCED DURING LOCAL NIGHT ON 16TH.

BLANKETING SPORADIC E WAS OBSERVED AT TIMES ON 10TH, AND 13TH-15TH. SPREAD F WAS ALSO OBSERVED ON 14TH AND 16TH FEBRUARY.

FORECAST (17 FEBRUARY - 23 FEBRUARY)

SOLAR: VERY LOW TO LOW

GEOMAGNETIC: QUIET TO UNSETTLED.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Castle Hill Radio Museum

Castle Hill Military Radio Collection will once again be mounting a display at the Wyong Field Day this year.

Items on display will include:
a BC611 U.S. Infantry walkie-talkie
the U.S. Navy TCS small ships transmitter
a Bendix RA-1B Catalina aircraft receiver
an Australian Wireless Set no 62, with no 10 Calibrator
a late model No 19 Mark 3 tank transceiver
and an Eddystone 730 receiver in military guise
There will also be an associated display of the English Larkspur equipment.

If you need any information on service type radio equipment, please contact me and I will endeavour to bring it to the Field Day.

Donations of equipment, spares or manuals to the collection are always greatly appreciated. As usual, I will have an empty trailer with me.

Please contact me on (02) 680 2112.

Ian O'Toole, VK2ZIO, Curator, Castle Hill Military Radio Collection.

Club news: AAPRA

AAPRA at the Field Day

AAPRA has been busy preparing for the Central Coast Field Day next Sunday 26th February at Wyong. We will be demonstrating a new modem which will run TPK, Graphic Packet, Baycom and who knows what else? It will be available in built-up form ready to go, although homebrewers will not be turned away.

There will be another Packet Seminar which will cater for present and prospective packet operators. So, if you have any questions about packet radio or want to find out what it is, come along.

Our shareware library as well as our books and manuals will be at our exhibition table where some exotic new packet programmes will be demonstrated.

See you there next Sunday

-- Geoff VK2BQ Publicity Officer

Coming events

Coming events

Howdy all you net folks and amateur radio people.

I bought a USED Kenwood 78A a while back for a good price and it's great. It works fine transmitting and receiving, but there is ONE little very annoying problem. It beeps a bunch. Now I don't mean the normal beep for button press, or beep cauze my battery's low. I mean, it just beeps. This seems to happen most when there is no radion trafic and I have not transmitted in a minute or so. At first I thought it was the cold (because when I first noticed the problem, the radio was cold) But, as far as I can tell, it has gotten worse since I bought it. I don't remember it doing it at all when I first got it. Hmmmm. It does this when it's plugged in and/or with the battery. I have the APO off and the battery saver on.

Does anyone have any idea what I should do (the radio is not modified). Or if I should send it to get repaired at Kenwood?

Thanks for any help,
Matt Clarke

Alan Davenport (adavenpo@willamette.edu) wrote:
: In article <3hat5t$rpa@on-ramp.ior.com>,
: Robert J. Raymond <bobr@on-ramp.ior.com> wrote:
: >Can anyone give me some details on what a gin pole is and how it is used?
: >I understand this can be used to help me put up my tower? Thanks.
: >

: A gin pole is actually a very simple device. It us used to raise tower
: sections above the already-in-place tower while assembling same.
: Basically it is a pole, usually aluminum tubing, with a clamp on one end
: and a pulley on the other. The gin pole is clamped to the top of the
: existing tower and extends above the tower further than the height of the
: next section. The next section is attached to a rope and pulled up and
: held by someone on the ground, while the person(s) on the tower work it
: into place and bolt it together. Then the ginpole is removed, taken up
: the new section and the process repeated.

: A word about ginpoles: commercially made versions are expensive but may
: be a bargain if a homemade one fails to survive. I don't like to think
: about what could happen if a section of 25G fell and hit a guywire below
: me. Better-quality ginpoles allow the hoisting rope to pass through the
: ginpole so as to reduce sideloads on the pole.

: Some larger ham clubs have ginpoles or you may know someone with
: connections to a company that could loan or rent you one.

: Hire lots of your friends for your tower party. The cost for all their
: labor is usually limited to pizza and beer (the beer *only* after the
: work is done!) :-)

: P.S. A ginpole is real handy when mounting large beams, too.

A great place to see a gin pole in action is at field day during setup
and teardown. I have learned more when I was a beginning ham at field
day than I did all year. They are very handy devices, but I don't want
to even imagine what would happen if one were to fail during it's load at
about 40 feet above ground... Hard ground.

2336. Re: Station ID question

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-23 02:52:00 UTC
From: drt@world.std.com
Message-ID: <D4FMMo.GFr@world.std.com>
Source record: 251736

Wa4fat (wa4fat@aol.com) wrote:
: Your input on the following station identification question would be
: appreciated.

: Q. What callsign shall or may be used by operators of a Club-licensed
: amateur radio station?

The very question locks you into an answer! Anyone operating a club
station must use the club *station callsign*. Period. But that's
not really your question ...

[deletions]

: In the case of club station operation, rule interpretation #1 seems to
: apply. Visitors are designated control operators of the club station and
: use the club's callsign. The station license trustee is seldom present to
: "lend" the station to a visiting operator.

: Under what circumstances, if any, would use of the operator's personal
: callsign be allowed when transmitting from a club station?

In part of what I deleted, you say the club policy is not to lend out
club equipment, and that everyone has to use the club call. That's
what forces people to use the club callsign. If the club were to
change policy, and allow any member to borrow the equipment (without
removing it!) at any time, it would be perfectly OK for people to use
their own station calls. Then what you called case 2 would apply.
One reason why you might not want to do this is that you might want
any complaints of interference or out of band activity or whatever to
go directly to the trustee, who is in a position to do something about
it, rather than who knows who, who might or might not do anything.
You can also require logging of club station activity; there's no way
to force someone to keep a log when it's not your station, meaning
there's no way to investigate complaints. But it's up to the club.

-drt

So what happened on your case in Court? Did the State attorney
give up on you?
Did you get your radio back?

Do they usually sell out-of-band radios, or do you have to modify
yourself?

>antenna and communicating via simplex.

very true. i have to be some what conservative where i live right now
but most of my operations from home are on simplex. i have a small
x-beam on a pvc stand that i can usually hear other mobiles within
a couple of miles and other base stations around the area. it's a much
more relaxed mode of operation since there's no timer and no autopatch
to have someone break in to use...(simplex keeps the phone patch repeater
free for phone patches...)
>
>Of course, simplex is not possible with a cell phone so your comment
>above does not preclude the possibility of hams continuing to
>communicate without a repeater.

ham groups should consider this aspect in their planning. the guys
here have had a bit of an uphill battle (repeaters are so warm and
friendly and "effortless" to use, you lose sight of what your real
capabilities are with the standard issue handi-talkie most have.
but it appears there are more people discovering there's more going on
than just on the "big" repeater frequency...

one thing that is happening is attempts to get good installations at
key locations so that when we're needed, the odds are good there'll
be an antenna and cable present (minimum) to give even an HT a shot
at simplex ops..
>
>73 from warm and sunny Hawaii,
>Jeff NH6IL

it's been warm and sunny here (if i could just shake the last bit of
this flu...only made one pass at O'do before i really got queasy and
had to leave...)

the kicker is that the USPS isn't exactly part of the Fedrl Gummint any more.

that brings me to this little tid bit -- faxed to me this very day from
a former coworker who had gotten this from a contact at the USPS.

The story is that this is an explaination why they have ethernet cables
in the sorting centers....supposed to be a memo from a maintenance
engineering specialist to a maintenance center manager....

"Ethernet cable transmits and receives electronic data through ether, a
chemical in the wire. The ether provides much less resistance then does
copper or other metal alloys. This results in a much higher baud (data
transfer) rate.

While regular coaxial cable provides a baud rate of approximately 9,600,
ethernet's buad (sic) rate starts around 19,200.

Ethernet cable is required for the ISS/OSS and other automated mail
processing systems on the work room due to the high requirement for data
transfer within these processing systems."

And remember, you get all this technical expertise behind each 32 cent
stamp you buy...

(at least i don't think Michelson/Morley's been disproved yet...)
(was good for some yucks among the RF and network folks at the office..)

>stating that they represent those thousands of subscribers to QST.

Hi David,
I'm trying to determine how you derive your conclusion (your 2nd
sentence) from your first sentence. How does, say, 1% of the
non-coded Techs possibly getting a relative's 1x2 imply that
the ARRL was lobbying to protect its own interest? This current
fad of bashing the ARRL for no reason is nauseating.

A gut-feeling of mine is that if someone had a relative who owned
a 1x2, then that someone would more than likely have a higher class
license than a Tech. They probably would have been handed-down a
room full of HF gear. And possibly that relative would have Elmered
the younger one beyond Tech. No statistics, just my own feelings.

And that is why, eventually, the code requirement will eventually be completely abolished for the general class. It is not a real requirement for many people. You CAN choose to do a good deal of communicating without any CW at all. To make a reg to "keep the sludge" away is just unncessary regulations that are not tied to any rational grounding. Better, much better, to actually have a real TEST of knowldege. To give 300 questions and their exact answers...the EXACT questions...prior to the test so you can study up the exact test in advance does NOT test for functional knowledge of Ham Radio, it merely tests to see if you can hold a series of diverse and possibly completely incomprehensible facts in your brain for a few days. You don't even have to understand what you are answering...just answer "B" and that's it. Who the hell knows what a capacitator is, the answer is "B".
No. There is no real need to keep code at all levels as a requirement. It is just a tradition, and tradition changes. This will. Mark my words. But if it does change, the FUNCTION of requiring code needs to be maintained. Requiring code does provide a real function and fill a real need, but it is an artifice. A real, gotta-actually-understand-it test would be useful. That is the thing that the code requirement is taking the part of. There is no real written "test". Code is the test. At least that's how it seems to me.
I don't say any of this from a desire to "get" other frequencies without code. I just think it is going to happen, that's all. The only constant is change.

2345. AGC audio preamp circuit fixed/FAR Circuits

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-23 12:09:17 UTC
From: slg@rfc.COMm.harris.COM
Message-ID: <Pine.A32.3.90.950223065401.73484A-100000@fep01.rfc.comm.harris.com>
Source record: 251745

I posted a message earlier in the week re: problems with the AGC preamp circuit described in 2/95 QST, p. 58. The problem has been solved:

1. FAR messed up the PWB. The hole they drilled for the 12 Vdc power source's ground is wrong, shorting out several components that shouldn't have been going directly to ground. Once I moved that ground lead to an appropriate location, the circuit started working correctly.

2. I recommend using a potentiometer in place of the fixed 100k resistor at R8, as described in the last paragraph of the article. I got much cleaner audio when I adjusted the pot to approximately 50k.

Now the circuit is working perfectly--I recommend it to anyone w/ a DSP filter.

This is the first PCB I've bought from FAR Circuits. Not only did they make the above mistake, but I got a message from someone whose PCB had a solder bridge. Is FAR's quality control always this bad, or is this particular PCB especially problematic? I like the idea of buying PCBs from them (the circuit is pretty, small, and probably more reliable than it would have been had I used perfboard/point-to-point wiring), but troubleshooting this problem was an annoyance. What kind of luck have others had w/ FAR?

Well, actually, its both. The "N" number is assigned by the FAA. The FCC issues a station license to the aircraft and simply uses the FAA assigned number.

It seems the FCC would rather have as little to do with this as possible. Until around 1985 the FCC used to issue a radio license to pilots. Not any more.

I finally snagged KL7Y on 160 during the ARRL DX CW contest this past weekend. Actually, I got him on 6 bands.

If you still need KL7 on 160, KL7Y was quite active today at 0416z (2/23) on 1829.1 MHz. KL7MX was also reported today at 0315 on 1849.0 MHz.

Also, keep in mind that the CQ 160M SSB contest is this weekend.

Good luck!

: This is too facile a point. Let me reply by noting that, whereas other
: digital modes require a computer (or similar device) to properly
: receive, and can be subject to their own various forms of interference, the
: Morse Code under discussion here is normally received by a human ear,
: which is one of the finest instruments around for picking signals out
: of various forms of interference. I have yet to see a discussion of
: this question of comparing Morse to other digital modes which has
: convinved me that proper attention has been paid to the capabilities
: of the trained human ear as a signal processor. In paricular, the type of
: interference that destroys reception is probably _different_ in these
: two cases, and the relevant question should involve some discussion of
: this difference, and the prevalence of these different conditions in
: realistic settings on the various bands.. _That_ is what is commonly
: ignored in the discussions I've see.

: Anyhow, although I am no expert in any of this, I remain unconvinced
: that Code is quite so super-ceded by the newer digital modes.

No matter how good the human ear works, the modulation style limits
it to be no better then non-coherent BFSK demodulator, at a lower data rate.

: and see which is the more efficient system. I can't wait to see what
: you come up with for a receiving system! Will you be decoding the
: frequency shift by ear? If not, what will you use to display the decoded
: characters? Remember now, we're building from scratch.

: I guarantee when we're done you'll no longer call FSK a ``simple digital
: mode.''

Already done. We were going to fly it on our helo, but I found a
very inexpensive Spread Sprectrum system. In complete fairness the
modulator was a singal chip (yes a little more complex then many CW rigs, but
still fairly simple), and the demodulator was two chips. I could have
done the demod with two filters and a voltage comparator, but I got lazy and
used a PLL.
The nodes on either end were 68HC11s which are about as simple to use
as rolling off a log. Granted, a brass key is simpler, but a little to heavy
for flight weight constraints:-).
All in all, non-coherent BFSK is a very simple digital mode. Look
at a Baycom modem sometime.

As I have said, not being an expert in this subject, I am willing to
be convinced, but _not_ by any argument that dismisses the possibility
of very real differences between the brain/ear combination receiving
Morse in the presence of interference and the possible combinations of
DSP and analog filtering receiving a digital signal of similar
bandwidth.
To simply repeat that there _are_ no differences or that they somehow
cancel in an unspecified way, does not convince me.

Let me give an example of what I mean:
I can detect pitch differences of the order of a semitone (and, no I
^^^^^^^^^^^^^^^^^^^^^^^^^^
haven't computed the equivalence into Hz), and do not need an

extremely "tight" filter just to eliminate nearby QRM. I can do this
with some reliability even when the desired signal has less volume
^^^^^^^^^^^^^^^^^^^^ ^^

than the QRMming signal. Now, before you can even discuss whether this is duplicable with a digital system, you had better have some hard data on the underlined claims that can be fairly compared to the performance of the digital system. These are the sort of human performance parameters that have been studied by psychologists or other scientists in related fields. To claim, as you do that, "the lack of psychological studies" _doesn't_ "preclude any judgement of the superiority of digital modes compared to CW" means, to me, two things:
1). You aren't even aware if such studies exist (and I'd be frankly surprised if they _didn't_), (or you have poorly worded a statement which intended to say "the lack of the citing of psychological studies...")
2). You would be willing to judge the superiority of one mode over another without caring what a careful scientific study might show.

Now the first merely illustrates my earlier point: People want to make pronouncements about this topic without citing hard data that _is_ relevant. At least relevant as far as I'm concerned. But I expect to see an argument that would try to convince me that this data _isn't_ relevant, rather than the mere asserion that it isn't. Call me skeptic, but assertions don't wash. In very simple terms, you are essentially telling me that _you_don't_know_ what the performance of the human system is, you are just _sure_ that the digital system _has_ to be better...Now, I will be the first to admit, _I_don't_know_ what the performance of the human system is either, but, gosh-darn-it-all, it _does_have_ a performance level, and someone who is claiming that that is _exceeded_ by some other system had better show some numbers that are supported by _relevant_ measurements.

The second is illustrated by the arguments which boil down to "everyone else is abondoning X, therefor there is something superior to X". Such an argument hinges on a couple of points: (1) "everyone" is acting in an intelligent fashion, (2) we share the deciderata that influenced "everyone"'s decision.

Now, I have read contradictory things about the abandonment of Code. I have read that the military abandoned the code, only to return to it. I have _not_ read that they subsequently abandoned it again, although I would not be surprised either way. The military makes, IMHO a good illustration of the possibilities that this type of argument can be flawed, because we all know that they sometimes make decisions which, in hindsight, were pretty bad, or at least premature. Perhaps this is a case in point. Anyhow, all such arguments boil down to how we balance the desired capabilities versus the costs. I would be the first to admit that, if I wanted to send 64k of text to a friend, any other means than digital would be silly, _but_ isn't it a waste of bandwidth to take about 200Hz to send him my hand-typed (at certainly

less than 20wpm, I'm no speed typist) real-time just-now-thought-up-comment,
(order of magnitude of bandwidth of typical HF digital text mode)
when, at 20wpm Morse I would use up only 80Hz or so? (How many other
people can simultaneously use this band segment while I am typing this
digital message, if they are also typing messages at roughly the same rate?
How close can others come within my 80Hz code bandwidth without
causing my friend to make mistakes in deciphering my code?
Don't these different questions also effect the judgement?)

However that may be, I hope you see why I remain unconvinced by what
I've seen around here so far...and I _don't_ have any prejudice
against using a computer.

> the lack of redundancy, but with the redundant formats available to the
> amateur today, the bandwidth-throughput product leaves CW far
> behind.

Here you have an opportunity to supply some numbers to help those who
are not enamored of other digital modes to change their minds:
1) _What_ is the numeric value of this bandwidth-throughput product
for the two modes?
2) What is the degredation of this value in the presence of QRM and
QRN? (And is this a reasonable question, and if not, why not?) Or does
this quantity already take into account the effects of QRM/N and does
it actually reflect the reality of ear/brain performance in this case?
3) Since all of the above should be expressable in numeric terms, just
_how_far_behind_ are we talking here?
4) Does the use we expect to make, or traditionally make of the ham
bands _need_ this improvement?

And, of course this all leaves open the question of emergency
communications: for every example you give me of ships and governments
abandoning code, I can reply with examples where knowledge of the code
proved a life-saver because of the failure of the higher-tech systems.
I will admit that some of these stories seem a bit strange. For
example, I can't imagine being so cold that I couldn't speak, yet
could still send recognizable code by hand. I have never been in
danger of freezing to death, so I have no way of judging if this is a
reasonable thing, but it seems strange to others I have related it to,
also, so I'm not alone in this feeling. Here is an example where I
would expect the pro-coder to provide some hard data: I'm sure the Air
Force, among others, _has_ done studies concerning human capabilities
in extreme environmental conditions, so let's see the data that
supports this claimed divergence in motor skills with regards to
temperature.

Anyhow, for me anecdotal evidence is always potentially suspect. On
both sides of this debate. And so are unsupported assertions of fact.

> officer. If this system of communications is not superior, I would find
> it hard to believe that your government and mine, as well as all the other
> members of IMO (International Maritime Organization - another UN body like

> the ITU) would agree to convert from the Morse code based to GMDSS.

I never find the behavior of politicians to be hard to believe.
The political power accruing (sp?) to the nations which _control_
these satellites is _enormous_, and only enhanced if they can become
the "official" worldwide unique means of maritime routine and
emergency communication. Making the powerful and rich corporations
which build these babies and get them launched happy has to have some
political repercussions, too. However, anytime _anyone_ tells me that I
am actually _safer_ with all my eggs in one basket, I reserve the
right to be very skeptical of their motive. For someone who is
enamored of digital redundancy, the concept of redundant emergency
systems ought to be comfortable, and I submit that providing
auxilliary code capability has got to be one of the cheapest ways of
providing redundancy in this context that I can think of. Do you
disagree?

> Furthermore, if Morse code is so superior because of its low technology
> characteristic, why are all other services and users getting out of
> it?

If Ham Radio is so superior because of its higher level of conduct and
the challenging nature of its discipline, why did so many more flock
to CB in the sixties, and seventies? It would'nt be because it was
easier, and big corporations who stand to gain moocho bucks selling
bells and whistles to people who don't want to exert themselves don't
see a profit in the marketing of those bells and whistles, would it?
Heck, you can't even find more than one or two simple, no frills,
decent HF rig adds in between all the latest multi-vfo,
zillion-memory, automatic-everything-tuner, 100-if-filters plus DSP,
latest-model whiz-rigs out there. I submit to you that, willy-nilly,
Ham _is_ getting out of it too, but I think that the process ought to
be an _informed_ one, and not just motivated by a me-too mentality.

> To be blunt, although amateur radio operators claim that they are in the
> fore front of developing communications (I have no doubts about that
> claim), there is a vocal sector that states low tech is superior. In my
> view, this is a conundrum.

In my view, the assumption that low tech is always inferior is a poor
one to make. That is why I want to see the hard data, at least cited,
from peer-reviewed literature before I will accept the application of
that assumtion in this particular case. Low tech, after all, _can_ be
better, in certain circumstances, particularly when the cost of high
tech can't be supported. I'll take battery power for my HT over
lugging a SNAP-reactor around. :-) (Actually, modern batteries are
probably higher-tech than SNAP anyway.)

> communications to consider doing so, if not to confirm my opinions, but
> for to expand their horizons in amateur radio.

I agree with the last sentiment too, and hope that Hams can justify their
band occupancy with both quality _and_ quantity arguments, against the
other services which would potentially encroach.

> Please let's have more discussion, Gene.

I will be the first to plead ignorance in this case, but my ignorance
is not so much from not wanting to know the facts as it is in
never having seen a convincing demonstration of the facts. I am
willing to be convinced in either direction. Techno buzz words such as
"bandwidth-throughout product" (and _I_ don't mean this to be
perjorative, either) may or may not be meaningful, but not until I see
the numbers/model and all the hidden assumptions/presumptions wrt its
relevance explained. The Devil is in the details, as always, and He is
certainly pleased to see the flames generated over this issue.

> 73 and live better digitally
> Jim, VE3XJ

Digital - which means "by the fingers" - which means Morse!

Gotcha!

>why is the amateur radio gear going to survive over all the other
>equipment? there must be 100X the number of cell phones compared to
>2m HTs. what blows down the cell phone repeaters probably took
>down the ham repeater as well

The last major snowstorm that we had in Alabama was 2 years ago. It
was a thunder-snowstorm and lightning took out the highest tower
where the cellular, state troopers, and county sheriffs had their
antennas. The Troopers and SO managed to work around it. As far as
the cell site, it was about 3 days before cell service was back up. You
could make it into the next cell site (barely) if you had a gain antenna, but
if you didn't you were out of luck. Landline phone service was down in
some areas as well.

As for 2m and 70cm, the repeaters weren't on the highest tower and
survived with no problem. I wasn't a ham then, but I was listening. Even
11m had a good bit of activity!

It just goes to show you that amateur radio can survive when other
services fail.

Well, Shawn, I guess I just don't understand the rules of this game. First you bring up efficiency by saying OOK is not as efficient as some FSK modes, then you toss it off with a joke about basements full of batteries. Did I take you too seriously the first time?

Re your other posting about the 6811-based system, the skills you applied in creating that system are clearly of greater value and application to current radio practice than CW knowledge, but, even though you find it like rolling off a log, what you did was *not* simple. Converting human input to machine data, and reconverting back to human output, is a considerable task (of which a Baycom modem is only one element). Many people talk of digital modes as simple when what they really mean is that it was easy to buy all of the pieces. That's a valid criterion for consumers of technology, but amateur radio is supposed to be more than that.

jeffrey> happy about. As a result of such an abundance of
jeffrey> commercially-built radios being available, the older and
jeffrey> newer hams alike wanting to explore the world above 30 MHz no
jeffrey> longer have the impetus to build anything.

I'm a new ham, working on upgrades, etc. I currently operate a
Heathkit HW-16 CW-only transceiver with an HG-10B VFO. The set
probably needs going through, but I lack test equipment, and am having
some trouble finding someone to help me out. Reception is possible,
but not great, and I'm not real sure what transmit is like: I've
completed one QSO, and that was across town on the day I bought the
rig.

The truth is--I'd really, _really_ like to find plans for a multi-band
multi-mode HF XCVR that I could build for an affordable price. I'm
too BROKE to buy anything else. I saw a Kenwood TS520S at Ladd
Electronics yesterday, and while it was reasonably priced, and looked
like a nice rig, there just wasn't any way. I'm _stuck_ until such
time as I either save up enough soda cans (6000 for the Kenwood), win
the PowerBall (yeah, right), or find a way to build my own stuff.

If I could build something on a par with what's available in
work-horse transceivers I'd do it. If it was a modular kind of
design, to which I could add features as I could afford them, I'd be
able to get an earlier start. As things stand, I'll muddle by with my
Heath, but I feel like I'm operating under something of a handicap.
(I'm definitely operating under a spending cap.)

jeffrey> Amateur radio used to be synonymous with constructing at
jeffrey> least part of one's station (out of both need and desire) but
jeffrey> with what's on the market today most folks say `why
jeffrey> bother?'. Thus, we're becoming a huge pool of operators who
jeffrey> really know nothing about what's going on behind the front
jeffrey> panal of our rig. Trouble-shooting a broken radio now means a
jeffrey> phone call to UPS. I find this more than a bit troubling.

I'm a bit troubled too, though mainly because of the limitations that
a budget-bound individual faces when trying to get a start in HF.
Surely there are amateurs out there who are capable of designing a rig
like the one described above. I _think_ that I could, if I had enough
time to bone up on theory and the like. Alas, I'm also time-bound,
and I would like to spend some fraction of each day actually operating
(or at least copying).

2363. Re: No Code Rules!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-23 20:25:08 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.793571108@melpar>
Source record: 251762

One comment I think may be somewhat relevant to the CW vs digital debate (and, by the way, although the debate has been "heated" at times it has still remained pretty much a debate and not an argument; my compliments to all concerned): I think that, in reviewing the reasons why code is abandoned in some fields, there is always more to it than mere technical superiority of some other mode.

I submit that part of the reason that code is being abandoned in more advanced countries is purely *economic*. In the long run, it is far cheaper to install modern, high-tech, highly complex but unbelievably reliable (by '40s-'50s'60s standards) equipment than to pay the salaries of Radio Officers. The equipment can be available 24 hours a day, 7 days a week, forever, while the Radio Officer needs a relief, a vacation, time ashore, etc. The equipment is a one-time purchase which, if it follows the pattern of most modern electronic equipment, will *never fail* in normal usage (I haven't encountered a failure in a solid-state piece of ham or home electronics equipment less than 5 years old in 20 years, and no more than one or two *total* failures in older equipment.). This offers *tremendous* savings to, say, a ship-owner.

As some evidence of this, listen to the maritime frequencies and note which countries still use "live" CW operators: Those that probably find it *cheaper* to pay the low salries common in those countries then to invest the equivlent of several tens of thousands of dollars in modern, automated digital equipment. And until the International Regs make it mandatory that thay do so, they won't; but don't hold your breath for *that*, either! In 1923, there was actually discussion of outlawing spark at the Radio Conference in Washington, but the idea was shelved for *economic* reasons: Conversion to CW required the use of vacuum tubes which were then under the monopolistic control of a few manufacturers who charged exhorbitant prices for them (see "200 Meters and Down" by Clinton B. DeSoto, p. 84), so in deference to those who couldn't afford to switch spark was still allowed to exist (although it was virtually abandoned by everyone by 1925; sort of "died a natural death," so to speak).

Anyway, just another slant on this thread.....BTW, I'll be the first to admit that I "do code" *only* because I find it enjoyable. I could care less about its efficiency (or lack thereof) - it's a *hobby*, after all! If I want "efficiency" I'll use the telephone, or the Internet, or..... ;-)

|>
|>
|> Jeff NH6IL

The aircraft tail number IS the callsign. The FCC recognizes the tail number as a legitimate radio call sign since
that number is unique to all other aircraft worldwide. Actually the FAA keeps track of it's frequencies more than
the FCC. With all those ears on aircraft frequencies ending up in FAA flight centers plus all the pilots you
wouldn't get away with much.
BTW aircraft ground stations (Unicom and such) have callsigns similar to commercial 2 way radio calls but they
use their location as the designator and you don't hear the callsign. Our local airport (LGU) is just LOGAN.

SB DX ARL ARLD009
ARLD009 DX news

This week's bulletin was made possible with information provided by Bob, WB2CJL, Tedd, KB8NW, Joan, C31US, Denis, WD4KXB, and John, KK9A. Thanks to all.

BHUTAN. Yasuo, JH1AJT, one of the A51/JH1AJT crew, hopes to return sometime this summer. He left all the rigs, antennas and amps in Bhutan.

CONGO. DL1YFF is operating as TN1M and should remain active for another 3 or 4 weeks. Check 14239 kHz around 2115z.

MADAGASCAR. DL5UF, DK1CE and DF5WA will be active February 25 to March 10 on CW, SSB and RTTY, 160 through 10 meters.

CAMBODIA. Sanyi, XU7VK, has received a special call sign, XU95HA, which he can use for special events, such as contests, and any special Cambodian or Hungarian celebration. QSL via HA0HW.

LAOS. XW2A and XW1BOD have been active on 20 and 40 meter CW. 20 meter action is usually between 2300 and 0100z. Try between 1430 and 1700z and again between 2100 and 2230z for 40 meters. QSL XW1BOD via JA2BOD. QSL XW2A via JA2EZD.

WESTERN SAHARA. Tim, KC0PA, has been very active as KC0PA/S0, especially on 12 and 17 meters. Check 18126 kHz between 1645 and 1800z and 24950 kHz between 1415 and 1645z. Also check 3780 kHz around 2350z. QSL via Timothy Hardy, 137 Kelli Circle, Byron, GA 31008. No documentation for this operation has been received by the DXCC Desk, and the licensing authority in the past has issued only complete call signs.

SOUTH SHETLAND. DL7VTS continues to be active as DP1KGI from Ardley Island. He has been on 20 meter CW, SSB and RTTY, usually between

2300 and 0300z. Check out 7050/7185 kHz for his SSB on 40 meters at 0345z. QSL via DD6UAB.

ZAMBIA. Brian, 9J2BO is on the air daily on 1825 kHz CW around 0400z. He also operates 10 and 15 meter CW between 1330 and 1545z. George, 9J2GA has been on 1847 kHz SSB between 0345 and 0415z, and also 80 meter SSB between 0415 and 0445z.

BOTSWANA. Dave, A22MN, will be on 160 meters at 0330z daily for the next week or two. He normally transmits on 1827 kHz and listens up 5. Dave will leave Botswana in mid-March. QSL via WA8JOC.

GUATEMALA. Scott, KA9FOX, will be operating ''field day'' style from atop a 6,000 foot mountain as either TG0AA or TG0DX. During the first week of March he will operate from TG9AJR as TG/KA9FOX.

MONTSERRAT. Members of the Woodridge Wireless group will be operating VP2MFM March 1 to 6, including the ARRL SSB DX contest. Outside of contest hours, Denis, WD4KXB, will operate RTTY. Other operators may be on 160 through 6 meters. QSL via WD4KXB.

John, KK9A, will be on the air as VP2MFP from February 28 through March 6. He plans an 80 meter single band operation during the contest. QSL via WD9DZV.

ANDORRA. Prefix hunters note that during March the prefix C37 will be used by members of URA with C31 prefixes.

2368. TNC+modem+mouse=com port cram!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-23 23:28:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A41418.00CB002750.uuout@camel.com>
Source record: 251767

I'm suffering from "com port cram". I'm trying to run a serial port TNC (the Heathkit clone of the PK-232), a US Robotics Sportster internal modem, and a mouse, without plugging and unplugging all the time. I'm trying to use Lan-Link v. 2.32 for the TNC, and the Quick Link 2 software that came with the modem. Someone told me I need to set up the modem on com port 2 and the TNC on com port 4 (or vice versa), and use the same IRQ (#3). I've tried it both ways, but I can't get either device to work when both are plugged in. The TNC seems to work ok on com 4, but not the modem. Should I try different IRQs? Should I try running both the TNC and mouse off com 1 since I don't use the mouse with the TNC software? Any suggestions appreciated. Robert WD5AAT

2369. Lan-link and old PK-232 clone

I'm trying to get Lan-Link v. 2.32 to run my 1987 vintage AEA PK-232 (actually the Heathkit HK-232, a clone). Has anyone tried this combination? Or is this software only compatible with the newer PK-232MBX? Thanks, Robert WD5AAT

>there must be 100X the number of cell phones compared to 2m HTs.
>what blows down the cell phone repeaters probably took down the ham
>repeater as well

An interesting semi-pertinent story:

Two summers ago back in my hometown, we had a freak thunderstorm downburst roll through--85 mile an hour winds, hail, literally hundreds of trees uprooted or blown down all over the place, 100,000+ people without power, etc. (Fortunately, there were few injuries and relatively little property damage.)

After the storm let up, the only radio repeater working in the area was a two-meter repeater just north of town, that got spared the worst of the wind. No police, no fire, no rescue, no nothing. Just one ham repeater was all the wide-area coverage still working for about an hour. We wound up using the repeater to carry some traffic between the city police dept. and an outlying county sheriff's department later in the evening, once all the public service repeaters got their juice back.

(If nothing else, it prompted our club to make sure we had an emergency 440 repeater at the local hospital.)

It just goes to show--you never know sometimes. :)

2371. Good folks at FCC and ARRL - The system WORKS!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-24 00:40:15 UTC
From: dmlee@cris.com
Message-ID: <3ij9tf$f13@deathstar.cris.com>
Source record: 251770

I called the FCC 16 days after my last test to check the status. The agent I spoke with was actually concerned that they didn't have a record of it in that time and suggested I call the ARRL VEC (she even gave me the phone number).

I called the ARRL, the VEC was one of the most pleasent and helpful people I've had the pleasure to speak with (I'm sorry I don't remember his name). He took the time to check his records and found that my application had arrived the day before I called. He assured me that the information would be sent to the FCC the next day and that I'd have a call sign issued within 48 hours. He was right.

The system works. The ARRL (from the 10 or 12 people I've come in contact with) works. I guess the flamers here REALLY ARE the anomaly. There are folks working for a better system who care about amateur radio.

I'm glad to be back!

: really upholds that concept. If you have details,
: I'd appreciate those details: circumstances, results, and consequences
: (from FCC or other authorities).

: Ok to respond directly to me via email: brucem@eskimo.com

Hi Bruce
You didn't say whether you were a licensed ham or not.
If not, the only radios that you may own with transmitting capabilities must
be FCC type acceptaed, no exceptions.
If you make any alterations or mods to a radio with transmitting capabilities
then the unit is no longer type accepted.

Even as a ham, I know a few who lost their liicense for transmitting on
official police bands, even when it was an emergency.
The reason given for suspension was that other means of communications were
at their disposal at the time of the emergency...

Message-ID: <9502232042.ZM15278@SALCIUS2>
Source record: 251775

I'm using a KamPlus with the "Terminal" program which is built into Microsoft Windows. I'm able to connect to my local Packet Cluster and everything works fine. But as soon as I click on any other window on my computer, I am disconnected from the Packet Cluster.

Is there a setting on the Terminal program that allows me to do other things with my computer without causing a packet disconnect? Or is this a compelling reason to get some Host Mode software?

Do the multi-function logging programs such as LogWindows and PDA Logic4 have this problem? (I'm considering getting a logging program soon)

: Well, Shawn, I guess I just don't understand the rules of this game.
: First you bring up efficiency by saying OOK is not as efficient as some
: FSK modes, then you toss it off with a joke about basements full of
: batteries. Did I take you too seriously the first time?

No, the thread was different. People were implying that CW is a
skill needed by all HAMs due to natural/unnatural disaster. The battery
reference was just to put it place with an added :-). My fault was not
talk about effeciency in terms of cutting through noise, not power overall.

: Re your other posting about the 6811-based system, the skills you applied
: in creating that system are clearly of greater value and application to
: current radio practice than CW knowledge, but, even though you find it
: like rolling off a log, what you did was *not* simple. Converting human
: input to machine data, and reconverting back to human output, is a
: considerable task (of which a Baycom modem is only one element). Many
: people talk of digital modes as simple when what they really mean is that
: it was easy to buy all of the pieces. That's a valid criterion for
: consumers of technology, but amateur radio is supposed to be more than
: that.

I implied the Baycom on the FSK side. The human interface difficulty
varies with interface. A VT100 on a serial port obviously is easier then
a brain wave analyzer. Keypads are easy to implement, in fact it's a test
question on the local microcontroller's exam. As for an entire system, a
complete modem/terminal for radio work is a routine undergraduate project.
The only parts they buy are a raw microcontroller, modulator(XR2206 like),
demodulator(any number of parts or collections), and random glue parts.

73,
Shawn

Yes, of course, if one (or both) of us is ignorant on a particular
subject, we'll have trouble conversing coherently about it, even if we
both know English.

However, if you know only English and I know only German, we'll have
serious difficulty conversing about subjects we *both* know about that
are not covered by Q signals and prosigns.

I took issue with the statement "there are no barriers between hams
having different spoken languages". That is false. In the above
example, I could not talk coherently with you about my job, even with
Q signals and prosigns. That is a language barrier not overcome by
the use of Morse. We could communicate, to the extremely limited
utility of our common understanding of Q-signals and prosigns.

This limited communication could be important in an emergency.
But is it important enough to justify requiring Morse code proficiency
for every amateur who wants to use the HF bands? Shoot, maybe I
should be required to decode RTTY by ear in case someone sends an SOS
by teletype. Morse will continue to have its place, just as RTTY
continues in the face of AMTOR. If it is truly a superior method of
communication, amateurs will flock to it regardless of requirements.

Those that don't cotton to it will stay in the voice bands, as out of the way of Morse ops as those on the VHF bands.

Accepted, but the ham exams *don't* assume or require undergraduate-level engineering skills, and lots of people get upset when this level of technical examination is discussed. My only point (point? Was there a point?) is that while this kind of hardware and software may seem simple to you, after years of schooling and independent hacking, it's not something the average ham can do.

I doubt they use 300 baud HF transmissions either, which mostly proves
that such comparisons aren't worth much since the bugdets, missions and
levels of technical competence are so totally different between the
amateur service and any other commercial, govermental or military
service.

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com
Subject: K1MAN "Hamgate"

I thought you guys would like to see this since KO4TA has posted some controversial messages about K1MAN lately. Here is Glenn's response.

Date: 02-19-95
From: K1MAN

DE K1MAN - FCC & ARRL CORRUPTION

HAMGATE

There is a breaking story in amateur radio known as "Hamgate", and it involves formal charges of serious criminal corruption at the FCC and ARRL. For details, listen to the IARN Amateur Radio Talk Program heard on 3.975 and 14.275 MHz. alternating daily with regular bulletins at 6 AM, 7 AM, 9 AM, 1 PM, 5 PM, 8 PM, 8:45 PM, 9:30 PM, and 10:15 PM beginning Sunday, February 19, 1995.

Formal charges of obstruction of justice and criminal violations of Section 501 of the 1934 Communications Act have been filed against the FCC and ARRL with Jay P. McCloskey, U.S. Attorney in Bangor, Maine. Also involved is Georgia and other southern radio amateurs who have been charged with criminal violations of Section 333. It has been reported that the ARRL Board of Directors met a few days ago with regard to this and directly following the meeting ARRL President, George Wilson, W4OYI, also an attorney, had a stroke and has been hospitalized. Details will be discussed on the upcoming talk program.

Meanwhile, southern amateurs have been spreading misinformation about K1MAN, and the record needs to be set straight on these reports, some quite amusing:

1. K1MAN has in excess of $100,000 in unpaid FCC "fines." This is false, although it is flattering to be considered to be this important.

2. K1MAN uses a commercial transmitter costing one or two hundred thousand dollars. False! I run 1.2 gigaWatts with a home brew rig using several flux capacitors and plutonium to give it some more "kick." Just kidding; I run a Collins 32S-3 and home brew PL-172 on 20 and a KWM-2/30L-1 on 80. The AM bulletins are from a Collins KW-1 with reduced high voltage. Not used is a Collins 30S-1 and BTI 3-1000.......my monthly electric bill for the bulletin service alone

is already high enough at $115 per month!!!!!!!!!!!!!!!!!!!!!!!!!!!!

3. K1MAN has no interest in emergency communications. False! This is like saying that the Pope is not Catholic.

4. K1MAN is an egotist. True, but KO4TA's talk show last Sunday with special guest Fred Maia, W5YI, spent the first hour talking about vanity call signs and the second hour talking about K1MAN. Vanity call signs? Give me a break....and I am supposed to be the one and only egotist in the history of amateur radio?

5. The IARN programming last Sunday was two weeks old. False! It was all produced that same day..."Hours ahead when minutes count."

6. The FCC is going to prosecute the five year old $3,400 in "fines" against K1MAN very soon (according to W5YI) and that the justice system in this country is "very slow." False! Details on the next talk program.

7. K1MAN gets paid a salary from the IARN Amateur Radio Peace Corps Foundation, Inc., and it is all tax free. False. (I get paid in taxable ten pound gold bars, and the tax is also paid in gold bars which the IRS cannot cash in; they just pile them up at Fort Knox..... just kidding, of course.) Seriously, I don't get paid a dime.

8. K1MAN bulletins intentionally "drift" to cause wilfull interference. False! I replaced the 6AU6 vfo tube in the 80 meter KWM-2 and it did make a world of difference. (Try that repair technique the next time your "rice box" acts up!).

9. We didn't pay our hotel bill in Moscow when we were there during the Armenian earthquake activation. False! Actually, the KGB got our guys into the Soviet Union without marking anybody's passport, paid all the bills, and the hotel rooms in Moscow were always the same ones (complete with a telephone tap and tape recorder, we speculated) with telltale "clicks" during our long distance calls as Ivan connected his Radio Shack alligator clips imported from the USA.

10. K1MAN is opposed to live space shuttle transmissions on amateur radio. False!

11. Georgia bought K1MAN a plane ticket to come to the Atlanta ham fest. False. I bought a non-refundable ticket from Delta and then the Georgians disinvited me, and I had to embarrass them into sending me a check to reimburse my loss that they wrongly caused.

12. K1MAN has used the name of John Gree Listen to this week's talk program.

13. K1MAN is wealthy. False. My retirement plan (annuities and mutual funds) are still quite underfunded. No mortgages or plastic, however. Just a car payment on one of the vehicles. You guys should all be maxing out your IRAs, Keoghs, 401Ks, etc. This is my professional advice to you.

On that note I will end this editorial. See you all on the bulletins and the talk program (which is retransmitted daily throughout the week. 73

Glenn, K1MAN

You are cordially invited to listen to our live "call in" amateur radio talk program every Sunday night at 8 through 8:45 PM Eastern. We take telephone calls live at 207 495 2215. You can also FAX questions or comments to 207 495 2069 or use Packet Radio: K1MAN@K1RQG.ME.USA.NA This information bulletin talk program is simulcast live on 3.975 and 14.275 MHz. and is re- transmitted during the week by alternating with our regular bulletins. During the evening program between 8 and 11 P.M. the bulletins and talk program are each transmitted twice for a continuous 3 hour program for your information and amateur radio enjoyment.

For more info send an SASE to IARN, Belgrade Lakes, Maine 04918. If you would like to be a special guest on the talk program, call (207) 495-2215, and we will make the appropriate arrangements.

I've come to the conclusion that W is the worst letter
to have in a callsign. It's the only one that has a longer
pronunciation (double U, three syllables) than its
phonetic (Whiskey, 2 syllables).

No other letter has that "distinction". In fact, it's the ONLY
letter that requires more than one syllable.

I wonder if there's a correlation between the number of W's
in a call and the interval to upgrade to get another call :-)

Hey fellows, how about taking this 75 meter SSB phone war, SSB good/, SSB bad crap over to r.r.a.p. where it belongs? Let's keep the thread on the subject here, Code good/Code bad, blah, blah.

2390. Digest of Articles - QST Jan 95 (Long - 49k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-24 13:44:20 UTC
From: wvanho@infinet.com
Message-ID: <3iknrk$4mf@horus.infinet.com>
Source record: 251689
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DIGEST OF ARTICLES - QST January, 1995

Following are digests of articles printed in the January, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:The WB2 "REMote" Link
Author>Millner, James - WB2REM
Source>QST Jan 95, pp. 29-34
Abstract>Construction of a remote operating system that will control a
Kenwood TS-440 at a distant site, using control signals on 222- or

440-MHz. and received audio on 2-meters. No computer is necessary.

Digest>WB2REM developed and built a remote operation control system some 15 years ago. With it, he operates his Kenwood TS-440 at a remote location by sending control signals and audio to and from his operating position via VHF/UHF radio. The system does NOT require a computer at either end of the link. It needs only a controller interface that can be built for a total cost of less than $150, using readily available parts.

The overall system does require an HF transceiver similar to the TS-440 that is equipped for remote control. In addition, the operating site requires a UHF transmitter (uplink) and a VHF receiver (downlink). FCC regulations require control signals to be transmitted above 222.25 MHz., so either 222- or 440-MHz. can be used for the uplink, and 144-MHz. is convenient for the downlink. The remote station requires a UHF/VHF duplex transceiver equipped with fast diode T/R switching. The author uses a dual-band HT for the control end of the link, and actually works DX while operating mobile on his bicycle! His UHF and VHF signals pass through a repeater as he pedals around the town.

The HF rig is tuned across the band using the UP/DOWN scan controls of the TS-440. There must be a means of verifying the frequency on which the transceiver is operating, and also the remote transmitter must identify itself every ten minutes. WB2REM uses a voice-board accessory available from Kenwood which, on demand, announces the operating frequency in words. Identification can be conveniently done with an automatic CW identifier, such as the one described by Bunn: "A CW `Stamp' Identifier" in QST Oct 94.

Included with the article is a complete wiring diagram and parts list. PC-boards for duplicating the system are available from the author for the price of $16.50, including domestic shipping.

Title>TA2:Putting Your Uniden HR-2510 on VHF and UHF
Author>Fagas, Chris - WB2VVV
Source>QST Jan 95, pp. 35-38
Abstract>Describes simple modifications to adapt the Uniden HR-2510 10-meter transceiver for use with a transverter to transmit and receive on VHF, UHF or Microwave bands.

Digest>As amateur activity spreads to more and more UHF and Microwave bands, many hams find that the most convenient and affordable means of joining the activity on a new band is to use a transverter. This converts the output of an HF transceiver to the higher band and the received signal down to the HF band.

For use at the home QTH, the transverters are usually used in conjunction with the station HF rig. But in many cases, it is more convenient to have a small and more portable transceiver dedicated to working with the transverters. The Uniden HR-2510 is a single-band

transceiver designed for use on 10-meters. It is effective and relatively inexpensive, so WB2VVV made some simple modifications to the rig to optimize its performance with transverters.

The first modification provides adjustable control of the output power so as not to over-drive the transverter. A fixed resistor in the driver stage ahead of the final amplifier is replaced with an adjustable pot.

Next, a separate connection for receiver input is provided, bypassing the built-in transmitter low-pass filter and T/R switch. To provide for remote transmit/receive switching, a transistor-activated relay is added inside the cabinet.

Finally, Mr. Fagas devised a way to reprogram the microprocessor so as to allow the transceiver to transmit and receive over a 4.0-MHz. band from 26- to 30-MHz. He does not provide the details for doing this in the article for fear that it might be misused by non-amateurs. Instead, he offers to provide the details to any amateur upon receipt of a SASE including a copy of the writer's amateur radio license.

In a side bar with the article, Zack Lau - KH6CP/1 of the ARRL Laboratory staff, reports that the HR-2510 tested in their laboratory showed spurious signal transmissions too high by at least 14-dB. to allow it to drive a transverter directly. He provides the schematic for a filter that will reduce these spurs by some 30-dB., thereby eliminating the problem.

With these simple modifications, the HR-2510 becomes an excellent transceiver for this use.

Title>TA3:A Look at NVIS Techniques
Author>Farmer, Ed - AA6ZM
Source>QST Jan 95, pp. 39-42
Abstract>Obtaining blanket coverage of a limited geographic area through the use of near vertical incidence skywave (NVIS) techniques.

Digest>Although much ham attention is directed toward working DX, some activities depend upon reliable communication over a relatively limited distance. Examples are emergency operations and traffic nets. Such solid regional coverage, without gaps, is provided by "near-vertical-incidence-skywave" (NVIS) techniques.

The essence of such operation is to operate on a frequency low enough that radio energy directed vertically upward will reflect from the ionosphere, then use an antenna that directs most of the energy upward.

The highest frequency at which a wave aimed straight up returns to earth is called the critical frequency. For blanket coverage by skywave propagation, it is necessary to transmit below that frequency, but not so low that excessive loss of signal occurs due to atmospheric absorption. The critical frequency can be calculated by computer programs like MINIPROP.

Depending upon the time of day, time of year, and the state of solar activity, this usually dictates a choice of 40-, 80-, or 160-meters. Optimum antenna installations include horizontal dipoles or inverted-vees at heights from 0.1- to 0.3-wavelengths.

For operating on 160-meters, even 0.1-wavelength height represents relatively high towers. An alternative useful in some instances is a miniature loop antenna mounted in a vertical plane close to the ground.

Title>TA4:Getting the Most Out of Your T-Network Antenna Tuner
Author>Griffith, Andrew S. - W4ULD
Source>QST Jan 95, pp. 44-47
Abstract>Describes T-network antenna tuners and shows how excessive power loss can result from certain combinations of antenna and frequency. Advises how to tune for optimum efficiency.

Digest>A conventional T-Network antenna tuner uses two variable capacitors connected in series and one variable inductor connected from the junction between the capacitors to ground. The center conductor of the coax is connected to the respective capacitors at the input and output; the shield is grounded. This article analyzes a typical example of such a tuner in which the two capacitors can be adjusted from 20- to 240-pF. and the inductor between 0.1- and 35-uH.

This network can successfully match resistive loads of 10- to 3,000-ohms to a 50-ohm transmitter output over the range of 160- through 15-meters. On the 10- and 12-meter bands, the impedance range narrows to about 10-to 1500-ohms because the two capacitors cannot be adjusted lower than 20-pF. When the antenna load also contains reactance, the stated matching range narrows, but very few cases will be encountered in which the antennas cannot be matched to a 50-ohm transmitter.

It should be noted that this typical T-network is a kind of high-pass filter and, as such, will not attenuate harmonics. Since modern commercial transmitters and amplifiers must meet rigid spurious-emission standards, harmonic suppression in the antenna tuner is no longer considered necessary.

A T-network can be adjusted in an infinite number of ways to make a particular impedance transformation; therefore, any one of the three components can be made fixed and the other two adjusted. If a tapped coil is used for the inductor, it must be treated as the fixed element and the capacitors adjusted to match. But if the inductor is the roller type, a different method of tuning can be used.

Although a wide variety of different settings can perform the impedance transformation, the power efficiency will vary accordingly. The amount of power lost can, in certain circumstances, become a severe limitation. The article contains graphs relating loss vs. load resistance. They show that the loss rises as the load resistance is reduced. They also show that losses tend to rise exponentially as the frequency becomes lower. On 160-meters, losses of as much as 20-percent of input power

can be expected using the components as indicated in this example.

In general, it can be said that the larger the output capacitor becomes, the lower the loss. Also, the higher the antenna resistance, the lower the loss in the tuner. For use on the lowest frequency bands, an output capacitor of 1000-pF., or greater, is advisable. Also, if a balun is used after the tuner, in order to feed the antenna via an open-wire line, use a 1:1 balun instead of 4:1.

In spite of all the measures that can be taken to maximize the efficiency of the tuner, on 160-meters it may not be possible to lower the loss below 0.2- or 0.3-dB. Even that small loss represents 5-percent, or more, power dissipation in the tuner itself. To avoid destructive heating of the components, it may be necessary to reduce the output power.

The author describes the proper methods of tuning roller-inductor- and tapped-inductors-tuners, as follows. For roller inductors that can be finely adjusted, first set the output capacitor to maximum and the input capacitor to half scale. Adjust the inductor for a dip in the indicated SWR, which may initially be barely detectable. Slightly increase or decrease the input capacitance and readjust the inductor for a dip.

If the new SWR reading is lower than it was initially, continue adjusting the capacitor in the same direction, readjusting the inductor to minimum SWR with each change, until reaching the point where further adjustments make no further improvement. If instead of initially going down, the SWR goes up with the incremental adjustment, reverse direction of the capacitor moves. If the minimum SWR that can be attained is greater than 1:1, make a slight reduction of the output capacitor, and repeat the previous steps. Optimum adjustment is reached when any change causes the SWR to rise.

For tapped-inductor tuners, start by setting both capacitors to mid-scale, select an inductance switch position and rotate the output capacitor through its range to seek a dip in the SWR indication. If no dip is apparent, set the inductance switch to another position, and repeat. When a dip appears, adjust the input capacitor for minimum SWR.

Make a slight adjustment in the output capacitor, one direction or the other, then re-dip by adjusting the input capacitor. If that drops the SWR, continue in the same direction; otherwise, reverse the direction of adjustment.

In some cases, an SWR dip can be obtained with different inductance settings. Choose the setting that allows the use of the largest value of output capacitance.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:QST Compares: 2-Meter FM Mobile Transceivers
Author>Ford, Steve - WB8IMY
Source>QST Jan 95, pp. 70-76
Abstract>Review of 8 2-meter transceivers designed for mobile use. Included are radios from Alinco, Azden, ICom, Kenwood, Standard, and Yaesu.

Digest>This review covers 8 currently-available transceivers especially designed for mobile use. They are:

Alinco DR-130T
Azden PCS-7000H
ICom IC-281H
Kenwood TM-241A
Kenwood TM-251A
Standard C-1208DA
Yaesu FT-2200
Yaesu FT-2500M

All of these are very small packages designed for mounting in, or under, the dashboard of a vehicle and many, if not all, of the controls are on the microphone. All units reviewed offer output power of 50-watts, switchable in 2 or 3 steps down to as low as 3- to 10-watts. All offer CTCSS encoders as standard equipment, and CTCSS decoders as optional equipment, except for the Standard C-1208DA which makes it standard. All offer memory channels and scanning.

Alinco DR-130T

The DR-130T is the simplest and easiest to operate of the units reviewed. It omits some of the "bells and whistles" that other units include, but concentrates on those features most often used. It also has the lowest selling price, $309, of all those reviewed.

The unit offers either 5- or 50-watt output operation. Some reviewers found that it became quite warm during 50-watt operation, but this should not be a problem if special attention is given to assuring sufficient air circulation across the rear-mounted heat sink.

The unit actually tunes over the frequency range of 136- to 174-MHz. This includes part of the aviation band, but since it is sensitive only to FM and aviation traffic is AM, this is of little use.

Reviewers comments were uniformly favorable except for complaints about the manual, which is considered inadequate.

Azden PCS-7000H

The PCS-7000H is the only radio in the group that offers a 2-year warranty. Its ample heat sink allows it to run cool, even during long conversations at the 50-watt level.

Receiver coverage extends all the way from 118- to 174-MHz., thus including the aviation band from 118- to 136-MHz. When the receiver is tuned to that band, it automatically switches to AM reception.

The "street price" is $335.

ICom IC-281H

The IC-281H is not only a 2-meter FM transceiver, it is also a 70-cm. receiver. This means that it can be used as one end of a full-duplex cross-band operation if the other station can simultaneously transmit on 70-cm. and receive on 2-meters.

Unfortunately, the low end of the 70-cm. reception is 440-MHz. That means that the satellite sub-band is out of reach. Otherwise, it could be used to operate packet at 9600-bits/s to work Oscars 22, 23, or 25 on packet as well as Oscar 27 on FM voice.

The reviewers discovered that the radio can be modified to extend the receiver coverage down to 430-MHz. and also to extend the 2-meter coverage to 118-MHz. However, it requires very extensive modification, including disassembly and unsoldering a surface-mount component, a function that most hams would hesitate to undertake.

Kenwood TM-241A

The TM-241A provides complete receiver coverage from 118- to 174-MHz. and both AM and FM operation, so can be used to monitor the entire aviation band when not operating on the ham band. Transmitter power can be switched to 5-, 10-, or 50-watts.

The reviewers unanimously praised overall performance and found the multifunction microphone especially well designed for mobile operation.

A late development is that the TM-241A has been accepted for military use (i.e. MIL-SPEC) rated. This means that it meets the severe endurance requirements set by the military.

Typical selling price is $335.

Kenwood TM-251A

This transceiver is loaded with "bells and whistles"; some reviewers feel too many. Most required several days to learn all of the various features, the selection of which requires figuring out the multiple functions on each control button.

One unusual feature is a built-in recorder that will digitize and record 16-seconds of incoming audio.

This unit is not only a 2-meter transceiver, it also is a full-band receiver on 70-cm. This allows full-duplex crossband links if the other station has a 70-cm. transceiver with 2-meter receive capacity, such as the Kenwood TM-451A.

The broad bandwidth for 70-cm. reception makes it easy to operate packet up to 9600-bits/s and work the Oscars 22, 23 and 25, which transmit between 435- and 437-MHz. while listening on 2-meters. The rig provides a 6-pin mini-DIN jack to connect to a packet TNC.

The average selling price of the TM-251A is $399.

Standard C-1208DA

The C-1208DA has all controls on the microphone so that the rig can be mounted under the seat of a vehicle, or otherwise hidden from view. When leaving the vehicle, users can take the microphones with them. The downside is that the buttons are necessarily tiny and reviewers found it somewhat awkward to operate. The digital display is difficult to read in sunlight; it is necessary to hold it at a particular angle.

Of all the radios tested, this has the widest receiver coverage. It tunes from 100- to 200-MHz., 250- to 520-MHz., and 800- to 1000-MHz.! It can be used, as is, to work Oscar 27 satellite on FM voice (2-meters uplink, 70-cm. downlink). It also has 9600-bit/s packet ability, so could be used with Oscars 22, 23, and 25.

Street purchase price is $430.

Yaesu FT-2200

The FT-2200 provides DTMF paging and also CTCSS encoding. It comes with a detailed, well-written manual and reviewers found it easy to use. The one criticism concerns a multi-function key which must be pressed and held for a varying amount of time, depending upon what function is desired. If the button is held too long, the operation that it activates is the wrong one!

Receiver coverage extends from 110- to 180-MHz. and automatically switches to AM when tuning the aviation band. Although the unit could be used as a packet transceiver, it does not have a separate TNC jack nor does it support 9600-bits/s packet.

Purchase price is $370.

Yaesu FT-2500M

The FT-2500M is exceptionally rugged. In fact, it was the first radio in this group to be accepted under MIL-SPEC rating for use by the military. The front panel is very well designed with only essential controls visible. Less-used controls are behind a drop-down panel. The accompanying manual received uniform praise from reviewers as uniquely straightforward and reader-friendly.

The FT-2500M works well on 1200-bit/s packet. With an internal modification, it can be made to operate at 9600-bits/s, but the modification should only be attempted by those experienced in working with surface-mount components.

Purchase price is $350.

Title>PR2:GAP Challenger DX-VIII Vertical Antenna
Author>Kennamer, Bill - K5FUV
Source>QST Jan 95, pp. 76-77

Abstract>Description and operating test results with the Gap Challenger. An attempt is made to analyze the principles of operation, without much success.

Digest>One of the more interesting antennas to be introduced in the last several years has been the GAP Challenger DX-VIII. It is a vertical designed for ground mounting, with an overall height of approximately 32-feet (9.75-m.). It is made of aluminum tubing. In the center, the tubing is cut in two pieces and an insulator is inserted, forming a gap between the two. It is this that forms the name of the company.

When it is erected, the manufacturer recommends that three 25-foot (7.6-meter) long radial wires be attached to the bottom of the antenna tubing.

GAP recommends that the coax feedline be at least 65-feet long (20-meters). Using its single feedline, it resonates on all bands in the LF, HF and VHF parts of the amateur radio spectrum except for the 30- and 17-meter bands.

On 80-meters, the manufacturer claims an operating bandwidth of 130-KHz. between 2:1 SWR points. The customer must specify in which portion of that band the resonant frequency should be. On all other bands, the SWR is rated better than 2:1 over the entire width.

A 3-foot (1-m.) long piece of plastic pipe is supplied with the antenna to be used as a base. The antenna, itself, is shipped disassembled. Included is a very thorough manual. The reviewer found that it is easy to assemble in 1-1/2 hours, or less, using the supplied nut-driver as the only tool.

The manufacturer has not published a theoretical analysis of the operation of the DX-VIII, but it is clearly "a vertical monopole with elevated feed", as described by Belrose in Technical Correspondence in this issue of QST. A side-bar with the Product Review contains a summary of an article from the December, 1991 issue of RADIO COMMUNICATION (published by the Radio Society of Great Britain), by Peter Hart, G3SJX which partially analyzes its operation, as follows.

The coax feedline leads through a hole in the outer wall at the lower end of the antenna, making no connection to the tubing at that point. It extends upward, through the gap, to the top of the antenna where it is terminated by a large value capacitor connected between the center conductor and the shield of the cable. The shield is also connected to the top of the antenna tubing. At the gap insulator, the outer shield of the cable is cut without damaging either the inner conductor or the dielectric. The shield on the lower part of the cable is attached to the lower piece of the tubing.

In addition, three stubs are shunted across the gap. They are made of pieces of small diameter tubing spaced away from the main antenna tubing with spacers of various lengths. One of the stubs extends upward from the gap, the other two downward.

The series stub formed by the coax inside the upper portion of the tubing is 1/4-wavelength long on 80-meters. It converts the large value of the end capacitor to inductive reactance which then acts as end-loading to resonate the upper portion as an 80-meter monopole. On other bands, it and the other stubs work in ways that are "not clear" to G3SJX, to resonate the antenna.

The reviewer had available, for comparitive tests, dipoles for 10-, 15- and 20-meters at heights between 20- and 30-feet (6- to 9-m.), an old Electrospace HV-3 vertical with 8 30-foot (9-m.) radials, and also a Cushcraft R-7 multiband vertical. The HV-3 is 31-feet (9.5-m.) high and operates as a top-loaded shortened monopole on 80-meters, a full-size quarter-wave on 40-meters, and a 5/8-wave on 20-meters.

On 80-meters, the operating bandwidth was found to be appreciably wider than specified: the antenna resonated at 3850-KHz. and showed SWR 1.6:1 at 3950, 1.4:1 at 3750. With comparative tests, the reviewer found the signal strength using the GAP to be about 2 S-units poorer than the old HV-3. On 40-meters, the GAP performed equally with the HV-3 and outperformed the R-7 by about 1 S-unit. On 20-meters, the HV-3 and the horizontal dipole both gave signals about 1 S-unit better than the GAP. On 20-meters, the GAP and the R-7 delivered about equal performance, 1 S-unit below that of the HV-3 and the dipole.

On 15-meters, the GAP and the R-7 were equal, more than 2 S-units poorer then the dipole at 30-foot (9-m.) height. On 12-meters, the horizontal dipole was 2 S-units better and the R-7 about 1 S-unit better than the GAP. On 10-meters, performance of the GAP was much poorer than any of the other antennas.

The reviewer did not try the GAP on 6-meters, but did on 2-meters. On that band, contacts were made but no comparison antenna was available. He was surprised to find that he could successfully operate the GAP on 30-meters by using an antenna tuner, although the manufacturer does not rate it for use on that band.

In summary, the reviewer feels that the GAP antenna does an effective job on all bands where it is active, with the possible exception of 10-meters.

Title>PR3:Free Software
Author>Anonymous
Source>QST Jan 95, p. 47
Abstract>Software, free for the asking, makes many calculations of interest to hams.

Digest>(This is a short "New Products" announcement, not a full Product Review, but it deserves inclusion in this Digest).

George "Murph" Murphy - VE3ERP, has released a new version of HAMCALC software, which is a collection of computer programs of value to anyone who experiments and designs in radio. Best of all, it is free for the asking; one can download it from the ARRL BBS at (203) 666-0578, or via

Internet.

The list of functions that can be performed by the various programs is enormous. It includes such items as design of air-core inductors, filters, antenna traps, attenuator pads, parabolic antennas, regulated power supplies, series and parallel components, telescoping aluminum tubing, great-circle paths, impedance-matching networks, transmission-line losses, sag in wire antennas, and on, and on, ...

The programs are all user-friendly and menu-driven. On-screen instructions are included for most functions.

The entire package can be downloaded from the ARRL telephone Bulletin Board at (203) 666-0578, or via Internet, by ftp from a number of sources including oak.oakland.edu. For those without modem access via telephone, the author will provide the programs by mail. Contact him at the following address:

George Murphy - VE3RP

Associate Tech. Editor

Title>TC1:A Vertical Monopole With Elevated Feed - A Full-Length Radiator
Author>Belrose, John S. (Jack) - VE2CV
Source>QST Jan 95, pp. 78-79
Abstract>When a vertical monopole is fed at a point 1/3 of the way up its height, it emits low-angle radiation over a much wider range of bands than one fed at the base. This article describes the details.

Digest>Mr. Belrose, an ARRL Technical Advisor, makes the point that a grounded vertical antenna with an elevated feed makes a better multi-band DX antenna than does one of the same height with base feed. A drawing accompanying the letter illustrates what is meant by an elevated feed. It shows a typical amateur tower of height "H" which is broken into two pieces, insulated from each other, at a point 1/3 of the way up from the bottom.

A 50-ohm coax feedline runs to the base of the tower where it passes through a 4:1 transmission-line unbalanced-to-unbalanced transformer. The ground side of the transformer output is attached to the base of the tower, as also are at least 3 radials cut to a quarter wavelength for each band to be utilized. The "hot" side goes to a 1/4-inch (6-mm.) diameter copper or aluminum tube that runs up the inside of the tower, insulated from it, through the gap between the lower 1/3 and the upper 2/3 of the tower, and is connected to the lower end of the latter. Thus

the lower section acts as a transmission line, with characteristic impedance near 200-ohms, feeding the upper 2/3 of the tower as a "thick" monopole.

The resulting antenna will give good performance over a much broader frequency range than will a ground-mounted vertical. The radiation pattern of a ground-mounted monopole shows a main lobe that concentrates most of the energy at low elevation angles when the height is less than 5/8-wavelength. When it is greater than that, however, the low-angle lobe breaks up and much of the radiation is emitted at high angles where it is largely wasted.

Elevating the feed point to approximately 1/3 of the total height prevents the breakup of the low angle lobe until the height is well over a full wavelength. Consequently, the monopole with elevated feed will deliver acceptable performance over a 5:1 frequency range (antenna electrical heights of 0.2- to 1-wavelength).

To illustrate the difference in radiation patterns between the two monopoles, vertical patterns for each were generated by computer using NEC-2 software. The antenna modeled was a tower 12-meters (40-feet) high with 4 insulated and resonant radials mounted 1-meter above average ground. The one with elevated feed was broken at the 4-meter level. Patterns were calculated for each band from 10- to 30-meters.

The 30-meter pattern (where the monopole is less than a half wavelength) shows practically no difference between the antennas. Both radiate in a main lobe at low angles. At 20-meters, the patterns show a decided difference; the ground-based antenna now shows substantial radiation above 60-degrees elevation.

For each band up to 15-meters, the elevated-fed antenna continues to show a single lobe at low angles as the ground-based one radiates more and more power in a high-angle lobe as its low-angle lobe shrinks. At 12-meters, the elevated-fed one also shows a high-angle lobe that is beginning to steal energy from the low-angle lobe. At 10-meters (where the antenna height is substantially greater than a full wavelength) the elevated-feed no longer gives much benefit. Both antennas show high-angle lobes that are at least 5-dB. stronger than the low-angle lobe.

HINTS AND KINKS (HK)

Title>HK1:Easier Adjustment For the 2-Band Coil-Loaded Antenna
Author>Michaels, Charles J. - W7XC
Source>QST Jan 95, p. 43
Abstract>A piece of wire, dangling from each end of a Lattin-type 2-band antenna, makes adjustments easier.

Digest>Many years ago, William J. Lattin - W4JRW, published in QST a description of how to make a dipole resonate on two adjacent bands using only loading coils near the ends of the wire. Recently, W7XC wanted to modify his 40-meter dipole to cover 80-meters, as well. He had previously learned that adjusting a Lattin-type dipole to resonance on both bands takes an annoying amount of cutting and splicing of the higher-frequency portion of the wire, since it requires adding wire to the original length, not trimming.

To make it easier to adjust, W7XC added 4-foot (1.2-m.) pieces of wire onto both ends of the 40-meter dipole and left them hanging down, not attached to the end insulator. Then he fastened a 5-foot (1.5-m.) extension wire from the original end insulator to a second insulator at each end of the antenna.

The Lattin design calls for loading coils of 100- to 120-uH. at the ends of the higher frequency dipole. The author finished by soldering each coil across the original insulator, electrically connecting the extension wire to the original dipole. Then he was able to tune the 40-meter section by simply trimming the length of the hanging wire, and tune to 80-meters by similarly pruning the extension wires.

Title>HK2:Storing Coaxial Cable
Author>Pagel, Paul - N1FB
Source>QST Jan 95, p. 43
Abstract>Store unused coaxial cable on reels obtained at the hardware store.

Digest>Long lengths of coax cable can be stored conveniently by using reels sold for holding garden hose. These are quite sturdy and often available at discounted prices of the order of $15 or $20.

Alternatively, plastic reels are sold for coiling electrical cord. These have outer diameters of about 14-inches (35-cm.) and can hold 50-, or more, feet of RG-8 cable. They sell for approximately $6.

Title>HK3:Use Red Etch-Resist Pens, Not Black
Author>Covington, Michael A. - N4TMI
Source>QST Jan 95, p. 43
Abstract>Red pens are better than black pens for etch-resist use.

Digest>Red permanent-ink markers make better resist pens than black ones. Further, the marking is nearly tranparent and it is easy to see the copper underneath to be sure it is not being etched away. Lumocolor Permanent Overhead-Projector pens are especially good for this use.

FEEDBACK (FB)

Title>FB1:"The Null Steerer Revisited", QST Jul 94
Author>Michaels, Charlie - W7XC

Source>QST Jan 95, p. 38
Abstract>Correct the schematic diagram in the original article, for greater clarity.

Digest>In Figure 1, the coaxial shield braid is shown grounded, but not with a lead directly from the cable to the No. 2 terminal on transformer T1. A short and direct connection is important, so the schematic should be modified to show a lead directly from the end of the shield nearest the transformer to the No. 2 transformer terminal.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular section of QST. It features articles of primary interest to newcomers to the hobby.

Title>NHC1:Gateways: Amateur Radio Meets the Internet
Author>Ford, Steve - WB8IMY
Source>QST Jan 95, pp. 58-59, 69
Abstract>Connect VHF/UHF packet networks in different cities through gateways to and from the Internet. TCP/IP protocol must be used.

Digest>Packet operations and bulletin boards are thriving and continuing to grow all over the country. Links between them, however, can be tenuous, so messages sent over considerable distances can be delayed, or even lost. HF packet and satellites help bridge the gaps, but both have limitations.

An alternative for long-distance links between packet systems is the Internet, which is fast, continuously available, and highly reliable. At least 30 packet/Internet gateways are now in operation in the USA, and many more will soon become available.

It behooves all packet operators to prepare to take advantage of such gateways as soon as possible. To do so, it is necessary to convert to TCP/IP operation. This is the protocol that is universally used on Internet, and so a TCP/IP message can pass directly from packet-to-Internet-to-packet.

To convert to TCP/IP, an operator needs only NOS software. The TNC must be capable of operating in KISS mode, but practically all modern ones are.

Using NOS introduces some complexities and a guide book will go a long way to ease the conversion. The author recommends "NOSIntro", by Ian Wade - G3NRW, published by the ARRL.

Title>NHC2:Quick and Easy CW With Your PC
Author>Taggart, Ralph E. - WB8DQT
Source>QST Jan 95, pp. 60-61
Abstract>Construction of a simple interface to connect a computer to a

radio for sending and receiving CW.

Digest>Many CW operators, especially those who have multi-mode communications processors (MCP) for operating digital modes, like to use their computer keyboards to replace keyers in forming code, and also for the computer to decode the received Morse code signal. WB8DQT, in this article, points out that one does not need an MCP; a simple interface can be used, instead.

The article presents construction details for a combined receive-interface circuit and transmitter-keying circuit. The total parts cost of the combination should be less than $50.

Complete schematic diagrams and parts list are included, as well as alignment instructions. The unit connects to the computer via the parallel printer port; only four of the contacts are used. Connections to and from the radio are only two: audio output from the radio's headphone jack, and keying input to its keying jack.

An etched and drilled PC-board is available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118, for $6.50 including domestic shipping. The software required is known as MORSE.EXE, which can be obtained at no cost from the ARRL telephone bulletin board system, (203) 666-0578, or from several other sources.

Title>NHC3:The Doctor is IN
Author>Various
Source>QST Jan 95, p. 63
Abstract>Questions and answers of primary interest to newcomers.

Digest>Questions discussed in this issue include: why repeaters operate with offset frequencies; the possibility of a geostationary amateur radio satellite; the reason why a multiband dipole might fail to operate on one band; and possible 40-meter compact beam antennas.

Title>NHC4:Packet on the High Iron
Author>Ford, Steve - WB8IMY
Source>QST Jan 95, pp. 64-66
Abstract>Relates a train trip on which he operated packet, as well as FM, through the window of his car.

Digest>WB8IMY took a trip on an AMTRACK train from New York City to Orlando, Florida, almost a 24-hour train ride. During the journey, he operated 2-meter packet, as well as some FM voice, from his roomette. He carried with him his 2-meter HT, a Kantronics KPC-3 TNC and a laptop computer. All along the route, he was able to contact repeaters and PBBSs through the window of his car.

Title>NHC5:A 5-Element Quad Antenna for 2-Meters
Author>Reynante, Jim - KD6GLF

Source>QST Jan 95, pp. 67-69
Abstract>Construction of a simple and cheap high-gain 2-meter antenna.

Digest>KD6GLF found himself a bit too far from the local repeater to provide reliable communications with an omnidirectional antenna. His solution was to design and build a 5-element quad antenna. His design is very simple and inexpensive. It is completely described in this article.

The mast and boom are both made of 2 x 2 inch (50 x 50 mm.) lumber. The spreaders for the quad elements are made of 5/8-inch (15.6-mm.) diameter dowel sticks, about 30-inches (76-cm.) long. The elements are made of No. 10 copper wire.

A plot of the SWR across the 2-meter band is included. It shows a minimum of about 1.4:1 at mid-band, 1.8:1 at the low end and 2.0:1 at the high end of the band. The antenna provides gain of about 11 dBi. The author reports that he has no difficulty accessing repeaters up to 50-miles (83-km.) away using only his HT with power output of 1.5-watt. He cannot even hear those repeaters when he uses his quarter-wave ground-plane antenna, although it is mounted 10-feet (3-m.) higher than the beam.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Call Sign License Plates
Author>Ludkiewicz, Mike - W1DGJ
Source>QST Jan 95, pp. 23-25
Abstract>Collecting auto license plates bearing ham radio calls.

Digest>W1DGJ enjoys the hobby of ham radio in two ways: by operating his amateur station, and by collecting ham radio license plates from the various states.

In this article, he gives a short history of states offering auto license plates bearing amateur radio call signs. Apparently, the first state to do so was Michigan, in 1939. By the 1950s, almost every state did, and they continue to this day.

Accompanying the article are illustrations of a few plates from various states, as well as one from a foreign country.

Title>GI2:The Hiram Percy Maxim 125th Birthday Memorial Celebration
Author>Cain, James D. - K1TN
Source>QST Jan 95, pp. 26-28
Abstract>A QSO Party to celebrate the 125th birthday of Hiram Percy Maxim.

Digest>In early September, 1994, an ARRL QSO Party was held in celebration of the 125th anniversary of the birth of Hiram Percy Maxim,

ARRL's founder. Participants could apply for a certificate; more than 5000 of which were issued.

The event will be repeated in September, 1995. Details will be published later.

Title>GI3:The Ham Radio Bill is Now Law
Author>Mansfield, Steve - N1MZA
Source>QST Jan 95, pp. 48-49
Abstract>The Ham Radio Bill passed Congress and was signed by the president. It is now Public Law 103-408.

Digest>After trying for several years, the ARRL succeeded in persuading the United States Congress to pass a joint resolution acknowledging that radio amateurs provide valuable help during all kinds of emergencies. It expresses the "sense of Congress" that all government agencies should encourage the use of new technologies in the amateur service. It also recommends that authorities throughout the nation should make "reasonable accommodations" for amateur radio operation from private homes, automobiles, and in public places.

The resolution was signed by President Clinton October 22, 1994. It thereupon became Public Law 103-408.

Although this law requires no specific action by any government agency or personnel, it can be of help in negotiations with any authority at any level of government that might be acting, or planning to act, in ways that might impede lawful amateur activities.

Title>GI4:A Call Sign Cap
Author>McCarthy, George - W6SUN
Source>QST Jan 95, pp. 50-51
Abstract>Caps and hats displaying call letters.

Digest>Many hams wear caps or hats of varying descriptions bearing their call letters emblazoned on them. In this article, Mr. McCarthy relates some of his experiences while wearing his.

Title>GI5:The Meaning of OMIK
Author>Cain, James D. - K1TN
Source>QST Jan 95, pp. 52-55
Abstract>Describes OMIK, an organization formed by African-American hams but open to all.

Digest>OMIK is a national ham radio organization made up primarily of African-Americans. The organization has more than 2500 members and has been active for more than 40-years. It prides itself on its informality, and carries on many worthwhile activities.

In the early days, the organization grew largely in response to the discrimination the members received from racial bigots in other organizations. OMIK is open to membership for anyone "interested in applied electronics", not necessarily licensed hams, and certainly without regard to race.

Title>GI6:The Considerate Operator's Frequency Guide
Author>Anonymous
Source>QST Jan 95, p. 86
Abstract>A recommended frequency plan for the HF bands.

Digest>Following is a frequency plan for each of the HF amateur bands. It is offered as a "gentlemen's agreement" for orderly division of the assigned amateur bands to minimize interference. It does not have the force of law; other than under the provisions of FCC rules, no frequency is assigned for the exclusive use of any station, or for specific modes of operation.

Frequency Usage

1.800-1.830 CW, RTTY and other narrowband modes
1.830-1.840 CW, RTTY and other narrowband modes, intercontinental QSOs only
1.840-1.850 CW, SSB, SSTV and other wideband modes, intercontinental QSOs only
1.850-2.000 CW, phone, SSTV and other wideband modes

3.590 RTTY DX
3.580-3.620 RTTY
3.620-3.635 Packet
3.790-3.800 DX Window
3.845 SSTV
3.885 AM calling frequency

7.040 RTTY DX
7.080-7.100 RTTY
7.171 SSTV
7.290 AM calling frequency

10.130-10.140 RTTY
10.140-10.150 Packet

14.070-14.095 RTTY
14.095-14.0995 RTTY
14.100 NCDXF beacons
14.1005-14.112 Packet
14.230 SSTV
14.286 AM calling frequency

18.100-18.105 RTTY
18.105-18.110 Packet

21.070-21.100 RTTY
21-090-21.110 Packet
21.340 SSTV

My under standing is that if you jumper the ear plug output to the mic inout plug it will act as a
across band repeater. I have a ft-470 but never have tryed this.

Vince send :-)

Could someone tell me what the restrictions are for operating on UHF/VHF in Spain and Mallorca? I will be going there for a month and would like to operate. Thanks! 73 de AA2TF

2398. wanted: fiberglass poles for antenna construction

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-24 16:32:56 UTC
From: miller@spk.hp.com
Message-ID: <D4IJAx.89u@hpcvsnz.cv.hp.com>
Source record: 251697

I am looking for a source of fiberglass poles for antenna construction (eg. Quads). I seem to recall that a recent QST antenna construction article mentioned an economical source of said poles, but I cannot remember what issue it was. At present, I am unaware of ANY source for fiberglass rods/poles. Does anyone out there know where I can get this stuff?

> I just picked up a old crydtal set. But the detector is broken, the wisker has detached itself from the crystal...

The whisker was never attached to the crystal. You adjusted the point of the wire by moving it around on the crystal surface until you find a sensitive spot. It was held against the crystal only by tension. Adjusting one is an art, not a science. Good luck.

> So what happened on your case in Court? Did the State attorney
>give up on you?
> Did you get your radio back?

The judge ordered the radio be held until my 'probation' is over.
At that point, I can ask for it to be returned, and theoretically,
I should get it back then. Rather than inform the judge that he
had no authority to make any kind of order concerning my radio,
(since it is an FCC matter), I accepted his decision.
My whole point of trying to get it back wasn't for the property
so much as it was to prove a point to the university cops.

> Do they usually sell out-of-band radios, or do you have to modify
>yourself?
>
Many radios come with the capability to receive out of band.
None that I am aware of are sold with the capability to
transmit out of the amateur frequencies.

Since I am a licensed ham, I have the right to build, repair, and
modify amateur equipment. My grandfather, who isn't a ham, cannot
legally do so. You can legally have another ham do the modification
for you, but since the radios were basically built in such a way
that modifications are simple, most hams with two good eyes, and a
steady hand would perform the operation themselves.

A lot of hams argue the legality of possessing a modified radio,
but if the FCC doesn't have a problem with it, why should they.

When I say it is legal to make the modification, that doesn't
necessarily mean it is legal to use the radio for which it was
modified. Obviously I can't transmit on police frequencies with
my modified radio (unless it was an emergency situation).

I believe hams can't even modify a 10 meter rig for transmitting
on 11 meters. CB radios have to be type accepted, and for the
most part, ham radios aren't.
If you could modify a CB radio to transmit on 10 meter ham frequencies,
more power to you, but once you do, you technically cannot legally
use it on CB channels because you voided the type acceptance.

Also, legally speaking, if a cop confiscated my radio, and used it
to transmit on cop frequencies, the cop would be violating
all kinds of regulations. (I think I counted 7 regulations)

This did happen, and even though I could show proof of the
violations, the FCC wasn't interested because they felt the cops,
which are ignorant of radios, were just doing what they felt was their job.

gotta run

I have operated in Spain under CEPT, 2m /P & /M.

As in France, I could never find anyone to talk to - I could hear QSO's on repeaters
but all in Spanish. There is a widespread packet network but this mainly seems
to use high sites which necessarily have a lot of traffic going through them
and are therefore hard to access.

I never heard anything on UHF.

Good Luck !

: In article <1995Feb23.151117.11459@clark.dgim.doc.ca>, Jim Cummings
(jcumming@dgim.doc.ca) wrote:

: > I believe that there has been no discussion on the different types of
: > interference which affects digital communications differently than CW
: > because there is none. They are subject to the same sources, i.e. fading,
: > multi-path, co-channel, adjacent channel, etc. However, I would be
: > pleased to know your insights on this matter and would welcome a
: > discussion on this topic.

: As I have said, not being an expert in this subject, I am willing to
: be convinced, but _not_ by any argument that dismisses the possibility
: of very real differences between the brain/ear combination receiving
: Morse in the presence of interference and the possible combinations of
: DSP and analog filtering receiving a digital signal of similar
: bandwidth.
: To simply repeat that there _are_ no differences or that they somehow
: cancel in an unspecified way, does not convince me.

I understand your dilema, but I believe that you are trying to compare two
different criteria. No doubt the ear is a very good matched filter, but
such skill is attained by very few people. On the other hand, there are
very sophisticated digital modes which are can detect data, using
sophisticated algorithms which when listened to by the ear are not heard!
In other words, there are digital techniques which are robust enough with
signal to noise (or s-n/n if you prefer) that when using that marvellous
human detector, the ear, that would otherwise be declared noise.

: Let me give an example of what I mean:
: I can detect pitch differences of the order of a semitone (and, no I
: ^^^^^^^^^^^^^^^^^^^^^^^^^
: haven't computed the equivalence into Hz), and do not need an
: extremely "tight" filter just to eliminate nearby QRM. I can do this
: with some reliability even when the desired signal has less volume
: ^^^^^^^^^^^^^^^^^^^^ ^^^
: than the QRMming signal. Now, before you can even discuss whether
: this is duplicable with a digital system, you had better have some
: hard data on the underlined claims that can be fairly compared to the
: performance of the digital system. These are the sort of human
: performance parameters that have been studied by psychologists or
: other scientists in related fields. To claim, as you do that, "the
: lack of psychological studies" _doesn't_ "preclude any judgement of
: the superiority of digital modes compared to CW" means, to me, two
: things:

: 1). You aren't even aware if such studies exist (and I'd be frankly
: surprised if they _didn't_), (or you have poorly worded a statement
: which intended to say "the lack of the citing of psychological
: studies...")

You are right, I am not aware of any studies, much of my opinions are based upon my own experience and other collegues that I have consulted on these issues. None the less, I too have those same skills whereby I can ignore adjacent channel signal interference when copying Morse code. However, if there is a system that can copy signals that I can't even hear with ear, and sends that information faster than I can with a hand key, why is it necessary to undertake a scientific study to tell me which protocal is more efficient?

: 2). You would be willing to judge the superiority of one mode over
: another without caring what a careful scientific study might show.

We human beings make judgements all the time without having to resort to scientific studies. Even then, they are not absolute guarantees. For instance, there are some people who are members of the Flat Earth Society; regardless of what the scientists say, they are still convinced the earth is flat. I don't. But I didn't need a scientific study to tell me that either.

: Now the first merely illustrates my earlier point: People want to make
: pronouncements about this topic without citing hard data that _is_
: relevant. At least relevant as far as I'm concerned. But I expect to
: see an argument that would try to convince me that this data _isn't_
: relevant, rather than the mere asserion that it isn't. Call me
: skeptic, but assertions don't wash. In very simple terms, you are
: essentially telling me that _you_don't_know_ what the performance of
: the human system is, you are just _sure_ that the digital system _has_
: to be better...Now, I will be the first to admit, _I_don't_know_ what
: the performance of the human system is either, but, gosh-darn-it-all,
: it _does_have_ a performance level, and someone who is claiming that
: that is _exceeded_ by some other system had better show some numbers
: that are supported by _relevant_ measurements.

I am sorry, I am unable to accomodate you with scientific studies. I admire your stance and I fully support your belief. Scepticism is only prudent. On the other hand, I have been exposed to digital communications since I wrote my first college level paper on digital transmission techniques in the telephone system over 20 years ago. As well, I am an ardent experimenter in digital communications in ham radio. Furthermore, I am the holder of a RGMC certificate that qualifies me to work as a radio operator on board a ship equipped for Morse code communication. Finally, I have just finished a course that qualifies me as an operator on board a GMDSS ship.

My experience tells me that Morse code is ineffecient. My collegues who work in digital transmission tell me that it is inefficient. Therefore, I don't need a scientific study to tell me otherwise.

Is this scientific? Not by a long shot. However, if I may restate the challenge, do you have any scientific evidence that Morse code is as effective? In using your own criteria, you have not presented any scientific evidence to convince me otherwise.

: The second is illustrated by the arguments which boil down to
: "everyone else is abondoning X, therefor there is something superior
: to X". Such an argument hinges on a couple of points: (1) "everyone" is
: acting in an intelligent fashion, (2) we share the deciderata that
: influenced "everyone"'s decision.

: Now, I have read contradictory things about the abandonment of Code. I
: have read that the military abandoned the code, only to return to it.
: I have _not_ read that they subsequently abandoned it again, although
: I would not be surprised either way. The military makes, IMHO a good
: illustration of the possibilities that this type of argument can be
: flawed, because we all know that they sometimes make decisions which,
: in hindsight, were pretty bad, or at least premature. Perhaps this is
: a case in point.

I have no knowledge of the fact about the re-introduction of Morse code in the military in the US, and I must admit that I doubt that it is a widespread introduction, but probably have very specifically targetted applications, i.e. long haul Special Forces tactical communications.

On the other hand, I understand that the US Coast Guard no longer has a listening watch on 500 kHz for distress traffic. In addition, our own Transport Canada trained its last group of Morse code qualified coast station operators this past September. There are other examples whereby Morse code is being abandoned as a means of communications.

: Anyhow, all such arguments boil down to how we
: balance the desired capabilities versus the costs.

This is changing the course of the discussion. Previous to this point, we were discussing the merits of ear decoding and machine decoding of radio communication protocals. Concurrently, you would not readily accept my experience that machine protocals are superior to human ear detection because of the lack of scientific data. So be it. Now the discussion has shifted gears to the economics.

: I would be the
: first to admit that, if I wanted to send 64k of text to a friend, any
: other means than digital would be silly, _but_ isn't it a waste of
: bandwidth to take about 200Hz to send him my hand-typed (at certainly
: less than 20wpm, I'm no speed typist) real-time just-now-thought-up-comment,
: (order of magnitude of bandwidth of typical HF digital text mode)
: when, at 20wpm Morse I would use up only 80Hz or so?

No.

: (How many other
: people can simultaneously use this band segment while I am typing this
: digital message, if they are also typing messages at roughly the same rate?

Using Time Division Multiplexing, quite a few.

: How close can others come within my 80Hz code bandwidth without
: causing my friend to make mistakes in deciphering my code?
: Don't these different questions also effect the judgement?)

I don't know. What documented evidence do you have? Share it with us
please.

: However that may be, I hope you see why I remain unconvinced by what
: I've seen around here so far...and I _don't_ have any prejudice
: against using a computer.

So as far as I can determine, you remain unconvinced of the superiority
of digital communications over CW because you feel that there haven't
been enough scientic studies to prove it.

I don't know of any, but it doesn't mean that they don't exist.
Therefore I am relying on my own experience. But since you need to have
that convincing scientific evidence, I can only invite you to undertake
the research necessary to confirm your opinion. You are quite right -
don't take my opinion for granted - go find out for yourself.

: > the lack of redundancy, but with the redundant formats available to the
: > amateur today, the bandwidth-throughput product leaves CW far
: > behind.

: Here you have an opportunity to supply some numbers to help those who
: are not enamored of other digital modes to change their minds:
: 1) _What_ is the numeric value of this bandwidth-throughput product
: for the two modes?

Bandwidth-width throughput product means the amount of data (usually in
terms of bits) per second per unit bandwidth. For example, three 20 word
per minute channels of Morse code with an 80 Hz channel spacing is
roughly equivalent to a 170 Hz 45.5 baud Baudot channel.

: 2) What is the degredation of this value in the presence of QRM and
: QRN? (And is this a reasonable question, and if not, why not?) Or does
: this quantity already take into account the effects of QRM/N and does
: it actually reflect the reality of ear/brain performance in this case?

This product is a constant, regardless of any interference. I suspect
you mean what is the error rate under these conditions. Under these
conditions, as I have stated previously, there are digital systems which
perk along just nicely under conditions that are impossible with Morse
code systems.

: 3) Since all of the above should be expressable in numeric terms, just
: _how_far_behind_ are we talking here?

How far behind what?

: 4) Does the use we expect to make, or traditionally make of the ham
: bands _need_ this improvement?

If we do not, we will not be able to continue to claim that amateur radio operators a technically proficient. If amateur radio operators do not continue to experiment with these modes, stagnation stares at us in the face. If we stagnate, and do not develop new techniques, we will lose another support to continue to use the radio frequency spectrum. Otherwise, we are nothing more than examined CB operators who can send Morse code.

: And, of course this all leaves open the question of emergency
: communications: for every example you give me of ships and governments
: abandoning code, I can reply with examples where knowledge of the code
: proved a life-saver because of the failure of the higher-tech systems.

The use of Morse code alerting is becoming less and less as time goes on. On the other hand, the recent rescue of the Achille Lauro off the coast of Somalia with no loss of life was an instance where that ship was installed with GMDSS equipment. Under those same conditions, the rescue would have been more difficult if instead of using GMDSS, it used the rapidly less used Morse code based system.

: I will admit that some of these stories seem a bit strange. For
: example, I can't imagine being so cold that I couldn't speak, yet
: could still send recognizable code by hand. I have never been in
: danger of freezing to death, so I have no way of judging if this is a
: reasonable thing, but it seems strange to others I have related it to,
: also, so I'm not alone in this feeling. Here is an example where I
: would expect the pro-coder to provide some hard data: I'm sure the Air
: Force, among others, _has_ done studies concerning human capabilities
: in extreme environmental conditions, so let's see the data that
: supports this claimed divergence in motor skills with regards to
: temperature.

I think that the picture that you paint is unreasonable. Considering that the body shuts down blood supply to the extremities, fingers would be one of the first parts of the body to lose its capabilities when the body is subjected to adversely cold conditions. Furthermore, speach capabilities are one of the last to be shut down. Therefore, your scenario is not reasonable.

With respect to Air Force studies - please don't insult my intelligence. I find it unacceptable that you will not accept my evidence which has been acquired through experience while you go and claim that there must be Air Force studies on a subject that is tangental to the discussion.

: Anyhow, for me anecdotal evidence is always potentially suspect.

Go read the ITU Radio Regulations, the Safety of Life at Sea Convention, International Maritime Organization Regulations, Ocean Voice, etc. I could go on and on. This is hardly anedotal information, you just haven't looked for it.

: On
: both sides of this debate. And so are unsupported assertions of fact.

: > officer. If this system of communications is not superior, I would find
: > it hard to believe that your government and mine, as well as all the other
: > members of IMO (International Maritime Organization - another UN body like
: > the ITU) would agree to convert from the Morse code based to GMDSS.

: I never find the behavior of politicians to be hard to believe.
: The political power accruing (sp?) to the nations which _control_
: these satellites is _enormous_, and only enhanced if they can become
: the "official" worldwide unique means of maritime routine and
: emergency communication. Making the powerful and rich corporations
: which build these babies and get them launched happy has to have some
: political repercussions, too. However, anytime _anyone_ tells me that I
: am actually _safer_ with all my eggs in one basket, I reserve the
: right to be very skeptical of their motive. For someone who is
: enamored of digital redundancy, the concept of redundant emergency
: _systems_ ought to be comfortable, and I submit that providing
: auxilliary code capability has got to be one of the cheapest ways of
: providing redundancy in this context that I can think of. Do you
: disagree?

Yes, most assuredly so, I disagree.

GMDSS was not developed and thought up by the politicians. It is a standard that was developed by radiocommunications experts and mariners to provide improved marine radiocommunications. This was developed in internaitonal fora such as IMO, Inmarsat, ITU, ITU-R. As a result, GMDSS is a dictintly better system for the rescue of ships in distress when compared to the old Morse code based systems. For one thing, GMDSS is world wide, regardless of the location of any other stations, both coast and mobile, while the old Morse code system was predicated that another station was within 150 miles of the ship in distress. Another characteristic is its redundancy. With VHF with DSC, MF/HF with DSC, Inmarsat terminals, EPIRBs, and SARTS, the distress alerting capabilities have been augmented when compared to the old system.

Morse code installations can hardly be called cheap because you have to have a trained operator on board. Radio officer salaries are $50k plus. Therefore, at today's prices, two years salary of a radio officer pays for the GMDSS installation. Besides, it would be foolish to install a Morse code installation on board a ship where there would be no one to operate that equipment.

Therefore, if you are looking at the economics and reliablity, GMDSS wins on both counts, hands down. And if you need any assuance on that, I suggest that you contact your nearest Coast Guard office and they will help you with your investigations.

: > Furthermore, if Morse code is so superior because of its low technology
: > characteristic, why are all other services and users getting out of
: > it?

: If Ham Radio is so superior because of its higher level of conduct and
: the challenging nature of its discipline, why did so many more flock

: to CB in the sixties, and seventies?

This is a totally different subject and it is not germaine to the
foregoing. If you wish to start another thread on this, by all means.

: It would'nt be because it was
: _easier_, and big corporations who stand to gain moocho bucks selling
: bells and whistles to people who don't want to exert themselves don't
: see a profit in the marketing of those bells and whistles, would it?
: Heck, you can't even find more than one or two simple, no frills,
: decent HF rig adds in between all the latest multi-vfo,
: zillion-memory, automatic-everything-tuner, 100-if-filters plus DSP,
: latest-model whiz-rigs out there. I submit to you that, willy-nilly,
: Ham _is_ getting out of it too, but I think that the process ought to
: be an _informed_ one, and not just motivated by a me-too mentality.

Gene, how does this relate to the foregoing?

: > To be blunt, although amateur radio operators claim that they are in the
: > fore front of developing communications (I have no doubts about that
: > claim), there is a vocal sector that states low tech is superior. In my
: > view, this is a conundrum.

: In my view, the assumption that low tech is always inferior is a poor
: one to make. That is why I want to see the hard data, at least cited,
: from peer-reviewed literature before I will accept the application of
: that assumtion in this particular case.

And I demand the same consideration. Show me that I am wrong. I refuse
to accept your experience too. Quote the scientific studies that refute
my assertions.

: Low tech, after all, _can_ be
: better, in certain circumstances, particularly when the cost of high
: tech can't be supported. I'll take battery power for my HT over
: lugging a SNAP-reactor around. :-) (Actually, modern batteries are
: probably higher-tech than SNAP anyway.)

No doubt, but we weren't talking of special circumstances, were we? We
were talking in generalities. Just because you aren't aware of what is
going on in the domain or digital communications does not mean that it
doesn't exist.

: I will be the first to plead ignorance in this case, but my ignorance
: is not so much from not wanting to know the facts as it is in
: never having seen a convincing demonstration of the facts. I am
: willing to be convinced in either direction. Techno buzz words such as
: "bandwidth-throughout product" (and _I_ don't mean this to be
: perjorative, either) may or may not be meaningful, but not until I see
: the numbers/model and all the hidden assumptions/presumptions
wrt its
: relevance explained. The Devil is in the details, as always, and He is
: certainly pleased to see the flames generated over this issue.

On the other hand, these systems exists, and they continue to exist
whether you believe in them or not! Existential this is not.

ARLP010 Propagation de KT7H

ZCZC AP78
QST de W1AW
Propagation Forecast Bulletin 10 ARLP010
From Tad Cook, KT7H
Seattle, WA February 24, 1995
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de KT7H

Solar flux was up last week, while geomagnetic activity was down. This is a nice combination because conditions are stable while the Maximum Usable Frequency is up. The A index for most of the week has been in the single digits, and there were many periods with the K index at zero or one.

Solar flux should stay in the mid-80s for the next month, with a possible disturbance around February 26 and 27, as well as March 7, 12 and 13. Conditions should be quiet again after March 16.

Scott Craig, WA4TTK has a new Windows version of the solar graphing program mentioned in past bulletins. This is a great way to view trends in the current solar cycle, as well as play around with different averaging and display options. The program is free, and available if you send a formatted high density disk with postage paid return mailer to the author at 409 Jessie Drive, Nashville, TN 37211-3534.

Sunspot Numbers for February 16 through 22 were 48, 56, 57, 69, 75, 77 and 77, with a mean of 65.6. 10.7 cm flux was 85.6, 89, 88.8, 94.6, 90.8, 89 and 85.2, with a mean of 89.

The path projection for this week is from Denver, Colorado to Laos. 80 meters looks good from 1130z to 1345z, and 40 meters from 1100z to 1430z. Check 30 meters from 1430z to 1600z, and 20 meters from 1600z to 1900z. The frequencies above 20 meters do not look good over this path at this time.

Comments or questions to the author of the propagation bulletin may be sent via packet to KT7H @ N7DUO.WA.USA.NOAM or via internet to tad @ ssc.com.

2409. Amateur Radio in Chile?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-25 00:21:54 UTC
From: mk@ra.UCSC.EDU
Message-ID: <3ilt72$e5u@darkstar.UCSC.EDU>
Source record: 251708

I've accepted a post that will have me operating from Chile for the next 3 years. With my application for reciprocal operating permit ready, I need to start deciding what portions of the radio collection to bring along (in addition to the HF rigs). Does anyone know about the level of VHF/UHF activity either FM, packet or cw/ssb, in Region IV, the vicinity of La Serena?

[Buncha Deserved Stuff Deleted]

Again Patrick-My apologies-Publically. No doubt you have read my private e-mail to you by now and in that I apologized and explained that I mainly used a "Follow-up" command for that post and although I was speaking to you about certain things I hopped onto my soapbox and was speaking to the general ham population on other things. So, again here too-it wasn't a personal attack on you. And, it had nothing whatsoever to do with the code - no-code thing or the no-code technician license.

I was merely complaining about the present state of amateur radio where we have individuals from all classes of license (I didn't state this in my original post so am doing it now) that have a difficult time changing a light bulb - I was not saying YOU could not change a lightbulb Pat but I can see how my post could be misconstrued as a personal attack.

Since I don't know you personally I cannot attack you. Since you don't know me or my personality you could interpret my post as a personal attack and that is what happened. It wasn't but I don't blame you for your response.

When there is no room for immediate feedback via this mode of communication-communication breaks down. Not having the talent for words also adds to the dilema.

Sorry Pat. Will be glad to assist you in finding the information you seek.

>"Seventy-Three"

Ouch! I felt the sarcasm in this. I don't blame you. But from me to you- a sincere

Seventy-three

SB QST ARL ARLB019
ARLB019 Update on ARRL President's Condition

ARRL President George Wilson, W4OYI, suffered a stroke on
February 11. His vital signs have stabilized and he is being
moved from intensive care to an intermediate care facility at the
hospital in suburban Virginia where he is undergoing treatment.
His wife Marian and their two children deeply appreciate the
expressions of support that have come from radio amateurs
throughout the world. Doctors are optimistic about George's
prospects for recovery. Cards may be sent to him c/o ARRL HQ.

> Rich Ki6ZH
>
RICH: YES, US and Japan have reciprocal operating privileges. And,obtaining a
Japanese license is simple, albeit somewhat costly. I spent three years in
Japan (July 1990 - July 1993) and held Japanese call sign 7J1AJJ.
Foreigners are assigned calls beginning with 7J. Anyway, to obtain
recip licensing application, you can telephone the Japan Amateur
RAdio League International division in Tokyo. I will get back
and post a message to you with phone numbers, etc. There is a Japanese
guy there who holds US Extra class ticket and he will send you application
and process it for you. You do have to send them 11,000 yen -- approx
$110 for a license. License term is one year and renewal is 4,000 yen.
I am digging round through my files right now and can't come up with
my old license application but as soon as I find it, I'll get info to
you. By the way, when you go to Japan, you will wnat to go to
Akihabara section of Tokyo. Just get on the train or subway and find th
find the Akihabara stop. That is the electronics mecca of Japan. But,
beware. There ain't no bargains anymore in amateur radio equipment.
Evertything there is as costly as it is in the US. And, the Japanese
80 and 40 meter bands, 2 meter bands, and 70 cm bands are different from
US so you cannot use eqpt for those bands in the US. Now, a lot of jailhouse
lawyers will tell you that you can buy equipment in Aki and modify it when you
return. You can have VHF gear modified to US specs if you are willing to pay
the US distributor to replace the CPU. It seems the Japanese were having

problems with locals buying handhelds and modifying them to operate out f band.
So, they just slapped some regulations on the manufacturers that required
spearate CPUs for domestic and export VHF radios.
You can clip a few diodes out of HF gear and make it operate on US
HF freqs but that can get ot be tricky.
Anyway, I'll get back to you with license info as soon as I find it in my mess
somewhere.
Joe, K4FPT, 703-257-9719 (voice).

2416. Part 2: Spark vs. C.W. - Historical notes

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-25 03:49:05 UTC
From: jeffrey@math.hawaii.edu
Message-ID: <D4JELt.BHJ@news.hawaii.edu>
Source record: 251715

phb@syseng1.melpar.esys.com (Paul H. Bock) writes:

> In response to my recently-posted comment that "spark was outlawed
>because it was inefficient and wasteful of bandwidth," someone posted
>a note that spark wasn't actually "outlawed" until 1966 or something
>like that.

Hi Paul,
That someone was of course me. I was wondering when someone would
finally say `huh?' to the 1966 date.

Many of the anti-code test advocates back up their convictions by
telling us what's happening outside the ham bands. Thus, that 1966 date
applies to a particular non-amateur frequency, 500 kHz.

Here are some excerpts from my source, _Contact_At_Sea_ by
Peter Schroeder (1967).

The Washington Radio Conference of 1927 specified that ``...spark
was to be eliminated below 375 kc, no new spark installations were
to be made after Jan. 1, 1930 except for transmitters of less than
300 watts...spark was to be forbidden by 1940 except for ship stations
of less than 300 watts...spark was to be forbidden to all land
stations after Jan. 1, 1935...''

``Between the Washington (1927) and Madrid (1932) radio conferences
there were many complaints about spark interference from European
broadcasters... (and) International Air Traffic Association... The
French government pressed for the complete suppression of spark
stations...not later than 1940.''

``At the Madrid Conference the delegation of the U.S. argued for the
elimination, by 1940, of all spark stations except those of an
emergency character... (while the) International Shipping Conference
argued for the status quo...'' (i.e. to allow spark to continue). Madrid
ended stating `` `The Administrations will endeavour to abandon
as soon as possible type B waves, other than on 500 kc (600 meters).'
...spark stations could use six frequencies: 375, 410, 425, 454,
500, and 1364 kc...''

At the 1938 Cairo Conference ``...8000 of 15,000 ships still using
spark...and they were declared to be essental in view of their
sturdy simplicity and reliablilty...'' (Cairo ended with only
allowing spark on 375, 425, and 500 kc).

Following WWII, the 1947 Atlantic City Conference ended with
the statement `` `The use of class B emission is forbidden in

all stations,' with several exceptions: Australian ships close to her coast..., `However, spark is permitted for emergency... distress calls and distress traffic on 490-510 kc...' The withdrawal of these frequencies from spark use was reaffirmed in the Geneva Regulations of 1959, where spark was limited, on a distress basis only, to 500kc.'' The 1947 conference reaffirmed `` `...500 kc as the distress frequency (and that distress emissions should be) A2 or class B (spark)...' encourged a condemned transmission mode (because) a mobile station might use any means available `to attract attention, make know its position...' ''

(Note that as late as Geneva 1959 spark still wasn't completely forbidden.)

(To be continued)

Gary: If you have never erected a tower or participated in
putting up a tower, BE CAREFUL. Towers are the most dangerous,
most deadly, and least forgiving of any aspect of amateur radio.
First thing you need to do is to call Rohn at 309-697-4400. Tell
them to send you the Rohn Amateur Radio Tower Catalog. It will
cost you $8.00 and it wil save your life. In there are the
drawings and specs for any size and type tower you might encounter.
I have jsut consulted my copy and to put up a 40' free standing
tower you will need a round hole 4 feet deep and 3 inches bigger in

diameter than the base cylinder. You bury the base cylinder,
tamping the earth every 6-8 inches, keeping the whole hting plumb.
Then, you and several friends with safety belts and hard hats build the
tower fromthe ground up. Best thing: get the Rohn book and study it then get
some friends who have done this before.
Remember, the size limits for antennas you can put on a free standing tower
are considerably smaller than limits on antennas for guyed or bracketed towers.
If you do not want to dig holes and pour yards of concrete for a guyed tower,
have you considerd using a house bracket? With a two-story house, you put up
two brackets, lag bolting th bracket through the siding into studs. You can go
up to 40' or more that way. I have one house bracket at the peak, a drive-in
base plate and my Rohn 25G is 40' with 15' of Schedule 80 mast sticking above
it, holding a tri-bander, 5 elms on 50 mhz, 19 elms on 144mhz, and 24 elms on
432mhz.
Get the Rohn catalog and study it.
73 es cul, Joe, K4FPT.

What is a gin pole and how to use it. A gin pole is properly called an
"erection fixture." Don't laugh. That's the proper name.
It is a long piece of pipe with one end slightly bent with a pulley

welded to that end. The other end has saddle clamps spaced to fit the
cross braces on the tower you are using it with.
How to use it.
Put the tower base in concrete and let it cure a coupel of weeks.
Standing on the ground, set the first ten foot secion of tower onto
the base and tighten the bolts.
Run a piece of new, big nylon rope through the pulley, put on your safety belt
and hard hat and two people go up the ten foot section.
Clamp the gin pole to the top braces of the ten foot section, with the
curved section of the gin pole facing out. The rope now hangs down to the
ground. Helpers on the ground tie the rope to the top of secon ten foot
section and guide it up as the two people on the tower hauld it up by pulling
the rope through the pulley.
when the tower piece gets to the top of the gin pole, one guy handles the rope
while the second guides the tower section into place. Tighte bolts.
Climb the newly installed piece of tower, untie rope. Unclamp gin pole, move
it up to the top of the newly installed section adn repeat the process to
install the next section.
Install temporary guys at the 20 foot level before you go any further.
etc, etc., etc.
Get the book from Rohn, Rohn Amateur Radio Tower Catalog, $8.00. Get some
experienced friends.
Towers kill.
Joe, K4FPT.

Hi Kim, guess I have to disagree, at least where HF is concerned. Almost any microcontroller can encode/decode CW. I don't know of any digital voice methods that work at 300 baud, no matter what the MIPS of the computer. Course, if the 300 baud legal requirement were removed, who knows what we might invent? Would digital voice be legal in the digital portion of the bands? Would digital voice be legal in the voice portions of the bands? Presently it takes about 2400 baud to adequately reproduce a human voice. SSB is really hard to beat for bandwidth _and_ speaker recognition especially when filtered and compressed.

: : amateur radio station?

: The very question locks you into an answer! Anyone operating a club
: *station* must use the club *station callsign*. Period. But that's
: not really your question ...

Okay. So what about those club stations that do not have callsigns?
We'll have one once they start issuing them again but our club has been
without a callsign since about 1979-80 when the club had very low numbers
and the callsign was not renewed?

: You can also require logging of club station activity; there's no way
: to force someone to keep a log when it's not your station, meaning
: there's no way to investigate complaints. But it's up to the club.

We require logging of our HF contacts on our club station. We log who is
operating.

We've done DX, contesting etc using numerous callsigns of members. The
last two 10 meter contests have operated under my callsign.

I am looking forward to having a new club callsign (actually we plan to
attempt to get our old call back... when the gate two of the vanity
program opens since the person who will be our trustee (faculty advisor,
as we are a university amateur radio club) who is an extra class operator.

I'm all for toughening up the writtens -- I've been saying so since I wandered into r.r.a.whatever. I further don't believe the Tech written had to be weakened to bring in more new hams; the elimination of the code test would have created the Tech explosion even if they had kept 3B in the written.

Subject: Online Service Killing Ham Radio

I wrote to John just the day before explaining a contention of mine that Ham Radio is an antiquated hobby that has been outdone, to a large extent, by the advent of online services such as Delphi, CompuServe and America Online. It is a difficult position to hold in such as Delphi, CompuServe and America Online. It is a difficult position to hold in defense of amateur radio against the speed, cost and versatility of Online services. As a point of defense for the difference between ham and online the issue of real time communication was brought up. This clearly no longer the case considering the use of IRC (internet relay chat) and other chat modes offered by all of the online services. Only the speed of your typing dictates the speed of your communication.

Here again I disagree with the idea of the amount of information that can be passed comparatively speaking between voice and email and chat-mode. And here we begin to peer into another realm of this debate that most people ignore. Amateur radio is an exceptionally elitist and exclusive group. It is a group that has made few concessions for accessibility issues with those who are either deaf or those with speech impediments. It is in the exploration of this argument that you unearth another prevailing attitude in amateur radio. Among most hams that I have encountered there is an underlying antagonism against anyone who is other than the white anglo saxon protestant. On numerous times I have heard hams discuss the degeneration of their hobby being measured by the number of minorities being licensed. The scenario goes like this.. With tobacco dribbling off the hams cheek I am told that the hobby is going to pot because "of all these dribbling off the hams cheek I am told that the hobby is going to pot because "of all these nigers". That's the attitude I have found in abundance in this hobby so far. The fact that the deaf and those with severe speech impediments are usually excluded from Ham radio is a traditional practice. It falls into that (us and them) dark ages mentality that fills the sewer of racism and hatred whose smell is obnoxiously apparent in the hobby. I am aware that there are ways to attain higher licences with what amounts to a doctors approval.. but I still observe a clique of mostly blue collar white male bigots bragging in self indulgent diatribes about their federal licensing and thousands of dollars sunken into HF rigs. Few hams are willing to help anyone. Few hams have ever learned the idea of humility.

Again we see how online services offer a similar level of accessibility to different people. The difference here is that you don't have to take a multiple guess test to gain access to this information exchange outlet. In amateur radio you have the typical white suburban slob who does nothing more than memorize every question in the question pool. Our diligent scholar then drives to some remote community college or ham fest question pool. Our diligent scholar then drives to some remote community college or ham fest and parrots out the answers. Our newly licensed ham is on his new rig within a matter of weeks having learned nothing other than...gee... our new amateur gives us a blank and empty stare.

There is one area of amateur radio that I do admit has no rival. That is the area of emergency communications. I am sure there are numerous examples of positive and life- saving examples of the use of the amateur bands for this purpose. Beyond the use of the amateurs bands for emergency communications, I do not see any constructive or positive influence it has in the areas of the advancement of the radio art, improvement s in communication and technical skills. I also read numerous articles concernings in communication and technical skills. I also read numerous articles concerning the latest California quakes where online services were crammed with emergency traffic going to and from the devastated areas. So even in emergency comms. online communication is rivalling the older ham bands.

It is my opinion that amateur radio is nothing more than the remnants of a once useful and technologically advanced hobby. It's days are now numbered. With amateur radio wasting so much bandwidth with mindless chatter about walleye fishing and the traditional -send me your qsl card <spit that tobacco>.. it is only a matter of time before the FCC gives the bandwidth over to the more productive use of cellular and commercial privilege. Not that I want to see all Ham radio come to an end.

Ask yourself.. what can you do in amateur radio that you can't do with an online service such as America Online or Delphi ? It is my belief that the online service industry will deliver amateur radio a death blow in the coming decade. With dwindling numbers having interest in ham radio, the already low standards for licensing will go even lower to attract more participation. Soon there will be no distinguishable separation between the 11 meter CB band and the other dwindling and obsolete amateur bands. And then.. bye bye ham radio.. and good riddens.

My point here is that the online service industry is going to overtake and slay the obsolesence of amatuer radio. The technology of the online service industry has advanced so far and so fast that most amateurs aren't even aware of their impending doom.

Sock it to me. Tell me what your feelings are concerning my position of what ham radio is and will be in the future.

Respectfully,

Mike Simpkins

Paul Knupke (CS) (knupke@babbage.csee.usf.edu) wrote:
: : : Q. What callsign shall or may be used by operators of a Club-licensed
: : : amateur radio station?

: : The very question locks you into an answer! Anyone operating a club
: : *station* must use the club *station callsign*. Period. But that's
: : not really your question ...

: Okay. So what about those club stations that do not have callsigns?

Well, the callsign for a club station that doesn't have its own club
station license is the trustee's callsign, so every club station has a
station callsign. (We hope - else how do you ID?)

If the trustee refused to let you "borrow the equipment" and required
you to "use his/the club's station" instead, nothing would be
different. It doesn't matter whether the license is a club license or
the trustee's primary license - ops can't use *their own* callsigns.

: : You can also require logging of club station activity; there's no way
: : to force someone to keep a log when it's not your station, meaning
: : there's no way to investigate complaints. But it's up to the club.

: We require logging of our HF contacts on our club station. We log who is
: operating.

But if the op is using *his* callsign, not yours/the club's, how can
you *require* him to do anything? It's not your station anymore. The
QSO doesn't go in your log, it goes in his - if he keeps one. He gets
the QSL, too. You don't even have any legal reponsibility for what he
does on the air, which is a good thing, since you'll never see the
pink slip.

We weren't talking about using a trustee's primary station license for
a club (which is legal, and for some necessary), we were talking about
letting people use their own callsigns with the equipment whenever
they needed a "new one," or whatever (which is legal, but different,
and is never necessary).

I'm not sure what kinda computer you have but I've heard that the new
local bus 486's use the same address space as COM4 for the video
card ROM...I spent a couple weeks trying to get a modem working on COM4
before discovering this...This might be the reason your TNC works on COM4
but not your modem...

-=> Quoting Mark Ellis to All <=-

ME> I've come to the conclusion that W is the worst letter
ME> to have in a callsign. It's the only one that has a longer
ME> pronunciation (double U, three syllables) than its
ME> phonetic (Whiskey, 2 syllables).

ME> No other letter has that "distinction". In fact, it's the ONLY
ME> letter that requires more than one syllable.

ME> I wonder if there's a correlation between the number of W's
ME> in a call and the interval to upgrade to get another call :-)

ME> 73, N2WZB (sigh)

Mark:

Well, I have another opinion. I think the letter "W" has a lot of
impact, due to it's uniqueness in having more than one syllable. A
lot of folks think "K" has punch, but I always wonder if they said
"K" or "A" or "J." It's also very distinctive on CW.

73 de Larry, WR2F (wouldn't you know it!)

Easy Jeff, this one is an ex-MP with a bad attitude. He has threatened
my extremely fat ass directly in 'rec.radio.cb' and my lawyer has drawn up

the necessary forms with the local DA for a charge of criminal harrassment
if the
abuse continues. I would guess that by now he is hiding somewhere in the
woods
and shaking in his boots. He will learn that just because I have a
tremendously
wide ass, it does not pay to mess with THIS citicorp executive. I would
guess his
attitude is exacerbated by excessive exposure to 11m radiation!

Your second question is easy; Generation X is the title the newsmedia
maddogs
have hung on the Post-BabyBoomer group. They are special in
many respects, only the least significant of which is the fact that their
chances to be gainfully employed are totally overshadowed by the lack of

any
interest by Industry in hiring most of them. Apparently the educational
has
failed to properly meet their needs. They can barely string a coherent
sentence
together, and their spelling is atrocious!

Easy Jeff, this one is an ex-MP with a bad attitude. He has threatened
my extremely fat ass directly in 'rec.radio.cb' and my lawyer has drawn up

the necessary forms with the local DA for a charge of criminal harrassment
if the
abuse continues. I would guess that by now he is hiding somewhere in the
woods
and shaking in his boots. He will learn that just because I have a
tremendously
wide ass, it does not pay to mess with THIS citicorp executive. I would
guess his
attitude is exacerbated by excessive exposure to 11m radiation!

Your second question is easy; Generation X is the title the newsmedia
maddogs
have hung on the Post-BabyBoomer group. They are special in
many respects, only the least significant of which is the fact that their
chances to be gainfully employed are totally overshadowed by the lack of

any
interest by Industry in hiring most of them. Apparently the educational
has
failed to properly meet their needs. They can barely string a coherent
sentence
together, and their spelling is atrocious!

> In the early days of wireless....

Paul - thank you for your information- that will teach me to be a
smart ass. I appreciate your explanation.

I still have my doubts about the universality of a "CW language" (and
yes I _do_ operate CW; that is, I transmit information using
continuous wave and 'code'- I hope to put the QRP rig on the air next
weekend...)

I do _not_ accept a string of ASCII characters parading across my
screen in this message group as 'CW'.

Thanks again, Paul - I hope to hear you on the air...

Since CW is still one of the top two HF modes in use, and CW is
the only mode allowed the freedom to be used on any frequency within
a band (U.S.) I see the Morse requirement as being justified.

If it will ease your mind, think of there being skill tests for
the top two HF modes: Speech for SSB, and code for CW, with the
speech test waived.

<>

I would REALLY like to see that letter. Amateur Radio Supply in
Seattle was fined six or eight thousand dollars for merely OFFERING
to TELL a customer how to modify an amateur radio for out of band
operation.

Could we have some difference here between how different FCC offices
interpret the law?

My other post covers my REAL objection to hams modifying their radios.
I spent five years trying to get cops to use their radios correctly.
I can't imaging a bunch of hams out there tying up police radios
with their own definition of "emergencies." Even if the hams follow
HAM procedures wonderfully...they're different than cop procedures.

code test

It was just something somebody said in response to a question about what privleges a Tech now has (all above 30MHz). I thought in its own odd phrasing it emphasized how much we give for passing a 55 question test.

>|>in 1991). The privileges relative to the effort/knowledge/skill
required
>|>are now out of all proportion to the other classes of amateur
license. This
>
>Again, I believe this has very little to do with the technician class

I don't dispute that, but no other class has gone backwards in testing requirements as much as the Tech has.

> Plus if you think making the technician class license include part
>3B is going to solve the problem, then I think you are incredibly
>naive.

Who said anything about "solving the problem"? I just think it was wrong to make the written easier, and I don't think *that* solved any problem (unlike removing the code test, which *did* get more warm bodies into the hobby, thus solving what some thought was "the problem").

>What part of their Yaecomwood would
>you like them to understand? The microprocessor control circuitry, the
built

chips,
>the soldering technique used for surface mount devices, the power
amplifier
>circuitry? I hold an advanced class license and I'd be hard pressed to
>give you a lot of details about the insides of my modern HF/VHF
transceiver.

Answer your own question. Are you satisfied if they understand
nothing of their Yaecomwood? Who's asking for details; fundamentals
would be good enough. How about notching up every license class one or
two clicks (3B for Tech, 4A for General, 4B for Advanced, 4B+ for
Extra).
>
>Think about how much has changed in electronics over the last 40-50
years.

and
>phone), we now have many many more options and things to learn. Which
>of those areas would you have the perspective technician learn?

Some of everything would do. We hear people on the air every day who
don't have a clue about the radio part of amateur radio. Most of them
would study more and learn more if they had to pass a harder test. It's
a start.
>
>Please note, I agree that the current tests are somewhat lacking, but
>it's not just not part 2 and 3a that need work.

No dispute there. Like I said, it's just that the Tech has given up
more ground than the others.

> Without studying I came
>within one answer of passing 4b and I studied all of an hour for 4a.
I'm
>no god's gift to radio theory, but I know how to take tests. And in
general,
>the current tests test your ability to take tests and not a whole lot
more.
>Fix that problem first. Although even then if amateurs don't use the
>information they'll lose it. Harder tests won't make people use the
>information they learned. Only interest or need can do that.

True, but I believe you have to reach a "critical mass" of knowledge to
even pique your interest, and I also believe that people who won't or
can't pass a somewhat tougher written are unlikely to be an asset to
what is and has always been a technical hobby.
>
>Finally, what do you hope to accomplish by making the written tests
harder?
>How will that change the amateur radio service? Can you measure that
>change so you'll have some way of knowing that the harder tests indeed
have
>the desired effect? Is there some defect in the amateur radio
population
>that you believe will be cured with a harder written test?
>
There was a time in the hobby when the majority of hams knew enough to

be able to put a piece of gear together and make it work, however below state-of-the-art it might have been. I believe that time passed sometime in my licensed years (Novice in '71). Who has benefited from this lowering of standards? The nation? The amateur service? What purpose is to be served by amateur radio as we move into the 21st century?

Technology is the great wealth-creator of the modern world. A country who's citizens lose the ability at all levels to understand and work with technology will see its standard of living slip lower and lower. Amateur radio is, I think, losing it's focus on individual technical improvement and developing more and more a go-to-the-store-buy-a-box mentality. I don't ask newcomers to be engineers, but let's not reinforce the notion, through such simple testing, that this technical stuff is just a formality to get a ticket. Yes, it's a different world. Being able to alter packet software source code is at least as valuable as being able to build a stable oscillator, but we don't give the impression via our standards that either of these things is important. If we just want to get lots of warm bodies into the hobby in the hopes that some will develop an interest in technical matters than why not make the current tests even easier? What makes the current level of testing "just right"? When the HF code requirement goes, will we then also ease up on the other written elements, instead of toughening them up?

Mike, KK6GM

>does what it was intended by bringing them back into ham radio as another
>way to experiment with their computers. Locally, I have stopped attending
>my club meetings because of this same shameful complaint from the "Old
>Timers", who have nothing good to say about anyone except themselves.

I have a question for the group. Every time someone mentions a "new"
technology (microcontrollers, DSP, you name it), they're shouted down:
"The average ham can't do that!" Why?

Consider that I--and many others--learned electronics and computers, including
assembly language, in their teens. Consider that many semi companies have
good databooks on their products, free or at least cheap for the asking.

These "undergraduates" people speak of are mostly wet behind the ears
themselves, and their experience and knowledge of electronics is not *that*
much more than that of most hams.

The older generation has no one to blame but themselves; they cry "No Elmers",
but where are *they*? Passing on what they know? "Goddamned kids of today
don't know *nothing*!" Learning new things? "I NEVER HAD TO DO THAT WHEN
I WAS YOUNGER, WHY THE HELL SHOULD I NOW?!" To those people fixated against
IC's: Get rid of your terminal or PC and post from a Model 33, and tell me
if it's the same. Then I'll grant your point. Hams have ALWAYS used what
technology was available to them; why should I be any different?

>This club is controlled by them and their attitudes have turned off many a
>new ham, or prospective ham.
If more people went up to them and said "You're being a jerk--stop it *now*",
maybe that might stop short a few of these types. Or perhaps suggest that
Jack Kevorkian should handle license renewals.

>hams would take the time to show them the rest of the world i.e. HF,
>instead of complaining about them being allowed to get a license in the
>first place, maybe there would be even more.

Yes. I never had an Elmer, but I *did* elmer someone myself. I
don't know everything, but I give him moral support, technical advice, and
leftover textbooks. If someone did that for me, he'd be my friend for life!

>
Robert - I'm doing something similar to you, with a mouse, a modem, a TNC,
and a digital voice processor board all in the same machine. Here is the
layout of COM ports and IRQ's that worked for me:

COM 1 /IRQ 4 = mouse (mouse CANNOT SHARE AN IRQ WITH ANYTHING ELSE!)
COM 2 /IRQ 3 = TNC (actually it's outboard rather than internal but this
shouldn't matter)
COM 3 is disabled
COM 4 /IRQ 3 = modem - for a 14.4 or 28.8 modem you should have a 16550
UART on whatever port you're using for the modem
IRQ 2 = DVP board
IRQ 5 = sound blaster

This setup works fine under both DOS and Windows. I have some problems
with it under OS/2 however, since I'd like to be able to run the TNC and
modem at the same time and that isn't possible without using a different
IRQ, and OS/2 (unlike DOS/Windows) requires the use of IRQ 7 for printing.

If you've done this setup, or something like it already, and it didn't
work, you need to check 2 other possiblilities:
1. Each COM port has a memory address assigned to it. Make sure you
aren't inadvertently having 2 COM ports sharing an address
2. Many hardware devices use what is called a DMA channel. You need to
make sure these aren't conflicting either. The documentation for the
hardware/software devices in question usually makes reference to these and
tells how to change them if necessary.

Hope this helps. 73 - Alan NS0B

> yet still choose to lambast the guy with hypercritical and
> irrelevant nit picking, then I'm a fool.

Having reread my original post, I hardly see where I 'lambasted'
anyone. Sensitive people on here... Some of the points I was trying
to make, albeit poorly, it seems-

Code often trancends CW- again, most of the repeaters around here
identify with code on FM. Also, strings of ASCII on a computer screen
are not CW.

On the topic of communication and what I understood what was going on,
someone raised the point of code (whoops, CW) and effective
communications with persons speaking other languages. The question
was to the effect of "how do you speak Chinese in "CW"", to which the
helpful reply was:

-.-. .... .. -. . ... .

I don't believe I was the first to be 'flip' about the topic, and I
don't find this, as you contend above, to be an explanation of how
people 'communicate' in 'CW'. A person asked a serious question, and
this was Jeff's response.

I am fully aware that when a friend meets me on phone and invites me to
do some "CW" later, that we are probably going to use the code. Which
is something I look forward to more and more of late- a lot more fun
than talking to hams in ASCII, it would seem.

2453. Kenwood TM-733 Experience

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-26 15:11:43 UTC
From: dhinch@cello.gina.calstate.edu
Message-ID: <3iq5nf$r2o@cello.gina.calstate.edu>
Source record: 251653

I am looking for a new dual band mobile rig which will also do 9600 baud packet. In analyzing the available models, I find that the 733 is the only one that is set up for 9600 baud. The 733 also appears to have a good range of other features and claims to have addressed the issue of intermod with AIP. Does anyone have any comments on this rig or have recommendations concerning another? I need to act pretty soon as there is a Kenwood coupon deal that expires in a couple of weeks.

Thanks in advance.

2454. International Callsign Database?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-26 15:18:14 UTC
From: Ken Haagenson <haagenso@haagenson.ultranet.com>
Message-ID: <3iq63m$gb1@caesar.ultra.net>
Source record: 251654

Can anyone tell me of a WEB site that has international callsign listings? The ones I've tried are fine for US calls, but don't seem to contain any international (Carribbean, Central America, South America) info.....

Please post replies to this newsgroup.

Tks,

2455. Postscript 610 form????

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-26 15:49:58 UTC
From: gsmlrn@gsm001.mendelson.com
Message-ID: <1995Feb26.154958.3920@gsm001.mendelson.com>
Source record: 251655

When the new 610 form came out, someone was kind enough to convert it to postscript and then post it here. Is it still available? I have looked in all the archive sites I could find, but I could not find it.

If you have it could you please tell me how to get it?

Thanks,

Geoff.

2456. QSL route to F9DE

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-26 15:58:06 UTC
From: davev@atkc.COM
Message-ID: <9502261558.AA08912@venus.atkc.com>
Source record: 251656

I wouldn't post this, except that this is my *FIRST* DX contact, ever,
in nine months of having a license, and I really want to QSL back
to F9DE. His name is Pierre, and he was somewhere near Paris, France
and I got him yesterday on 15 meter CW. If anyone could answer the
following, I would really appreciate it:

a) How (short of buying a call book) can I get the QSL route?
Is there a callsign server for Europe?

b) By proper manners, what should I send? I've heard of
International Reply Coupons. Do I get them at the post office?
How many should I send?

c) I don't speak French. (German and Russian, but no French.)
Is it acceptable to write out the QSL card info in English?

d) The new US stamps say "Good for sending USA mail only."
What gives? Where do I get stamps I can use to send mail out of
the USA?

e) I am an ARRL member. What would be the procedure for
trying to send back a QSL card via the ARRL? I heard that they
run a DX QSL card bureau.

Thank you very much for your replies.

join up with some radio clubs (use the club station...)

find out what others are using (know what to buy).

find out what new stuff is going for (a good base radio for $400 should
last you for at least 10 years unless someone figures out a new modulation type)

start saving the pennies...and while you're out scrounging around, don't
forget to scrounge the antenna parts...

Was this on NBC nightly news with brokejaw or on local WNBC?

This is also the result of the TV biz being dominated by the technically illiterate. Used to be that these facts couldn't be jumbled too easily. Back when reporters were journalists. Now they're usually 23 year old bimbos that have no concept of how anything really works in this world.

: : : amateur radio station?

: : The very question locks you into an answer! Anyone operating a club
: : *station* must use the club *station callsign*. Period. But that's
: : not really your question ...

I think that is totally false. As long as I am a licensed ham, I can
operate any "station" using my own ham callsign...including a club
station. I can operate at a friend's home or anywhere in the USA
as K2UNK using the friend's home station, an HT or whatever.

Indeed, today's current FCC licenses no longer specify any station
license at all.

The Following is a QST

The FCC says it wants to end its testing of computers for RFI
radiation, ham radio's super hacker is jailed and an update on the
medical condition of ARRL President George Wilson, W4OYI. All of
this and more on Newsline report number 915 coming your way right
now!

(*****
RFI CERTIFICATION

Interference to ham radio and consumer entertainment equipment may soon get a lot worse. This is because the FCC is considering permitting the manufacturers of computers and computer peripherals to market their equipment without having to apply for equipment certification and await commission approval.
Under current regulations, these devices must be FCC certified to ensure that they do not cause interference to radio services, including amateur radio. Certification requires that all measurement data and a detailed description of the product be submitted to the Commission's laboratory for review and approval. This is a process that can take 35 days or more.
But the FCC calls the current regulations particularly burdensome for small manufacturers. They say that eliminating the wait could save the computer industry some 250 million dollars a year. Also, that the proposed new authorization procedure would further align FCC requirements for personal computers with those used successfully in other parts of the world.
It all sounds good until you read the fine print. This is because the proposed new procedure as outlined in ET Docket 95-19 means that FCC authorization would be replaced by paper. By a process based on a manufacturer's or supplier's Declaration Of Conformity. In simpler terms, a letter from the manufacturer or supplier to the FCC that says a given piece of computer equipment meets or exceeds minimum standards.
But that's not all. The Commission also has proposed the option of permitting personal computer compliance to be based on tests and Declarations Of Conformity of individual components of parts without further testing of completed assemblies.
Right now, we hams are the ones who usually get the complaints. If this all comes to pass, you may soon be protesting to your neighbor about his PC wiping out 20 meters during a major DX opening!

(*****
W4OYI RECOVERY UPDATE

American Radio Relay League President George S. Wilson, W4OYI, is still hospitalized following a serious stroke that he suffered the evening of February 11th while in Washington, DC. We have this update on his condition.
We have some relatively good news on President Wilson's condition. We get it from ARRL Executive Vice President Dave Sumner, K1ZZ.

"As of Monday Afternoon, that would be February 20th, George's condition appeared to be improving. The doctors were quite optimistic that, having gotten through the most critical period, that he would continue to improve. They are gradually bringing him out of the sort of induced state of suspension they've had him in, in order to avoid further damage to the brain. It appears as if their is very little permanent damage that has been done, at least on the best assessments that they can make at this time.

So we are all quite encouraged. It sounds as if he may be able to be transferred to a hospital at his home in Kentucky in about 3 weeks." Dave Sumner, K1ZZ.

Dave adds that it is a little premature to make any final assessment, but the doctors are not ruling out that George Wilson, W4OYI may be permitted to eventually go back to work.
Get well wishes can be sent to President Wilson in care of ARRL Headquarters, 225 Main Street, Newington, Connecticut 06111 or directly to George at his Callbook address.

SUPER HACKER N6NHG ARRESTED

Convicted computer hacker Kevin David Mitnick, N6NHG is once again behind prison bars. The ham dubbed by the New York Times as the worlds most wanted fugitive hacker was arrested at an apartment in Raleigh, North Carolina after being traced there electronically by one of his alleged victims.
Mitnick, 31, was taken into custody shortly after midnight on Wednesday, February 15th by federal agents assisted by state and local law enforcement authorities. This, after an intensive two week electronic manhunt based on information supplied by a San Diego computer security professional. An expert who says that Mitnick may have been the Christmas Day hacker who robbed his computer of several security programs he had written.
The Times says it was computer security specialist Tsutomu Shimomura of San Diego's Supercomputer Labs who actually nailed N6NHG. Using his own computer expertise, Shimomura was able to determine on Saturday February, 12th that Mitnick was operating on-line using a computer and modem connected to a cellular telephone somewhere near Raleigh. Shimomura and investigators were then able to close in on the fugitive ham.
Mitnick, of Van Nuys, California was convicted in 1988 in a Los Angeles federal court on charges of stealing computer programs and breaking into corporate computer networks. He received a one year prison sentence, spent part of it in a half-way house but vanished from the area in 1992. A federal arrest warrant was issued on charges that he violated the terms of his probation.
While a fugitive Mitnick is alleged to have broken into numerous corporate and communications networks in California, Colorado and North Carolina. Investigators believe Mitnick may have caused damage to numerous files and may have stolen secret information including as many as 20,000 credit card numbers. He is also a suspect in a recent series of high profile security breaches to corporations on the Internet.
Mitnick also faces investigation by various state agencies nationwide. He is being held without bail and with very limited telephone access in a North Carolina federal detention facility until the government completes it inquiry in the case.

(*****
HACKER TRACKER TO SPEAK IN DAYTON

On a lighter note, word that computer hacker tracker Cliff Stoll, K7TA is making a return appearance at the Dayton Hamvention. Stoll, author of the best selling book The Cuckoo's Egg and the soon to be released Silicon Snake Oil will return as the featured speaker for the 1995 Dayton Hamvention Grand Banquet. Stoll wowed the Hamvention banquet audience two years ago with his dynamic and often irreverent discourse on tracking down spies on the Internet. This time around, K7TA will talk about the hype, superhype and megahype surrounding the Internet which many are trying to sell as Americas electronic superhighway.
Cliff's theme this time around is simple. He says that the Internet may be the great digital frontier, but it's a land without a soul and will never replace ham radio.
The Hamvention Banquet will be held Saturday evening April 29th at the Downtown Dayton Convention Center. For ticket information call Dayton Hamvention (513) 276-6930 and press the number 6 once you get an answer.

(*****
WINTER STORMS

Amateur radio operators in Alabama got first hand evidence of how important their emergency communications capabilities can be. That evidence came with incredible timing less than a week after hams met and pledged to work together to expand their Skywarn communications network.
The National Weather Service plans to close two of its offices in that southern state. That's expected to leave storm spotter groups in the largest cities relying on each other to relay severe weather reports to forecasters.
This was an eye opener. Here you have nearly a hundred hams from all across the state meeting to discuss working together. The hams picked a Saturday, February 11th to hold their statewide Skywarn meeting in Birmingham. Then, just five days later, deadly tornadoes strike the state right between Birmingham and Huntsville. Huntsville happens to be one of the areas that stands to be affected by the Weather Service consolidation. Lightning hits the Weather Service office in Huntsville, knocking out the radar and communications. Forecasters in Birmingham asked for help from amateur radio operators to allow the two offices to communicate. Amateur radio operators manned the Weather Service offices in each city, and used remote base technology to link repeaters in Huntsville and Birmingham together. The hams' services were needed for about two hours. But it drove home a point everyone had been discussing just the weekend before. And that point is simply that hams providing emergency communications in the state need to pull their resources and manpower together.
The middle of February was a busy time for Skywarn groups in Alabama. In less than a one week period, amateur Skywarn nets

were activated four times for everything from flash flooding to severe thunderstorms to tornadoes.

(*****
UK NEWS

From Great Britain, word that the new RSGB Liaison Officer has been appointed for Lancashire. He is Steve Ireland, G1VRH of Blackpool in Lancashire. RLO's hold a wide range of information and they are available to help any RSGB member seeking advice. Also from the UK, the Severnside Television Group 3 centimeter Amateur Television repeater GB3XG has become operational. Requests for details should go to the licensee G8VPG, whose address is correct in the RSGB Call Book.

(*****
ZL CW

Meanwhile, from New Zealand word that the NZART Council is conducting what it calls a realistic review of the amateur radio license grades in that country. Also being look at are the written examination syllabus and its structure, and the Morse code testing procedures. The NZART Council has established an Examinations Working Group to prepare the appropriate review documents.

(*****
UNCONSTITUTIONAL CABLE LAW

Closer to home, a federal law that prohibits telephone companies from providing cable television programming through in their telephone service areas has been ruled unconstitutional by a San Francisco federal appeals court.
The 1984 law was intended to prevent phone companies from dominating the cable industry. But 9th U.S. Circuit Court of Appeals says that it violates the freedom of expression. The court also says that the law appears to have outlived its purpose as well.

(*****
PHASE IIID TV

AMSAT's new Phase 3 D ham satellite is now a television star. At least some of the people putting it together are.
On February 13th, AMSAT's Phase 3D integration facility in Orlando, Florida was visited by the television show "INSIDE SPACE". Among those interviewed were AMSAT's Keith Baker, KB1SF and Dick Jansson, WD4FAB.
The discussion surrounded the AMSAT organization as a whole, its past accomplishments, and future endeavors. This, in addition to a detailed tour of the Phase 3D satellite under assembly. The program should air in two to three months on the SCI-FI channel.

(*****
BALLOON PAYLOAD FAILS

"We will be back" says the leader of the Iowa Balloon Scientists ham radio group. This, following an unsuccessful attempt to launch a balloon carrying Amateur Radio on January 21st.
Barry Buelow, WA0RJT, a spokesman for the Iowa based group says that they had hoped to loft payloads including a transmitter sending global positioning information on 446 MHz, a 2 meter packet digipeater and a 144 to 440 MHz crossband voice repeater. Buelow says that unexpected interactions between the repeater and the GPS receiver forced the team to remove the repeater from the payload.
Although the balloon ultimately was launched, the payload failed.

(*****
DX

In DX, G3MRC is active as 9Q5MRC from the Republic of Zaire. Joe has been heard operating mainly on 20 and 30 meter CW. Activity seems to be between 19:00 and 22:00z. His length of stay is unknown at this time. QSL via G3MRC.
Meanwhile LA9IY, is also active from Zaire as 9Q5IY. Bjorn will be there for three months and has been heard operating on 18.071 MHz around 16:30z. QSL via LA1K because Bjorn is not a member of the Norwegian bureau.

(*****
FUND ADMINISTRATORS REPORT

And now for a new feature. As you all know, a good part of our operating expenses are borne by a separate Newsline Support Fund. The current Administrator of this fund is our own anchorman Andy Jarema, N6TCQ. Among Andy's many talents is that he holds a CPA degree and is volunteering even more of his free time to watch over Newsline's finances. Andy feels that its time to let everyone know a bit about who is assisting in this area.

"From the state of California we heard from David Swann, KD6FJB of Santa Maria, Sam Pennosian KO6HE of San Mario, Cal Clemins, KE6HLL of Hemit, and Richard Grambsch, WA6TEM of Sunnyvale. And since we are a media source we couldn't help but notice hearing from Daniel Amoroso, NM3S from Media, PA. Clubs we heard from include the Amateur Radio Club of Anderson, CA, the Amateur Radio Emergency Council Repeater Group of West Palm Beach, FL, the Indianapolis Amateur Radio Association and everyone that supported us at the 1994 Indianapolis Hamfest.
Remember the clubs who support us get the club name, repeater callsign and service area get a mention during the newscast id break.
From our studios in Hollywood, I'm Andy Jarema, N6TCQ."

Look for Andy's report at least once a month here on Newsline.

(*****
Bill Grenfell, W4GF, SK

Some sad news to report. William S. Grenfell, W4GF, a former chief of the FCC's Amateur Branch and former chief of the Amateur Service Section has died. Bill passed away on January 27, 1995, in Vienna, Virginia. He was 82 years old.
Bill Grenfell worked for the FCC from 1940 until retiring in 1971, except for several years in the US Navy during World War II. He was an ARRL life member, a Quarter Century Wireless Association life member, a fellow of the Radio Club of America, and a member and former president of the Potomac Valley Radio Club. He was a licensed pilot and regularly flew his plane to the Dayton HamVention.
Bill Grenfell died after an illness of several years. His wife, Bernece, died earlier, and he leaves no close survivors.

(*****
W9YZE, MORSE CHAMP S.K.

Also, world famous Morse Code champ Harry A. Turner, W9YZE, died December 21, 1994, in Alton, Illinois. While in the military in 1942, Turner was clocked at 35 wpm using a hand telegraph key. In 1964 he applied to the Signal Corps for certification of his code speed record. His request was granted making him the record holder. W9YZE was 88 years old when he passed away.

(*****
BEST OF 75 NET

No you are not listening to another case of malicious interference on some Los Angeles area 2 meter repeater. Rather this is a weekly on air competition. It's found every Sunday night on the Best of 75 Meters Net. A place where representatives of all other frequencies can compete against one another to see which one has the strongest signal on the band. Literally a ham radio horse race!
But there is also a serious side to The Best of 75 Meters Net. Each week, net control station Don Simpson, KO4TA bring on a well known guest speaker over his autopatch. One of the first was W5YI VEC Administrator Fred Maia who fielded questions on a wide variety of topics including the vanity call sign program.
The Best of 75 Meters Net meets every Sunday for at least three hours starting at 7 PM eastern time. Look for it on 3.975 MHz, sit back and enjoy a grand old ham radio fun time!

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at Post Office Box 660937 in Arcadia, California 91066.

2474. Harvard H.A.M. folklore (new info)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-27 12:31:20 UTC
From: morawski@starbase.azrael.mitre.org
Message-ID: <MORAWSKI.95Feb27073120@starbase.azrael.mitre.org>
Source record: 251673

Distribution: world
Followup-To: rec.radio.amateur.misc

All --

I engaged the expertise of a friend to research the Harvard Radio Club folktale. He works for CRS, the Congressional Research Service, which has nearly everything ever produced by Congress in electronic form, fully indexed.

He found no records which substantiate the story. In particular, he found no record of anyone having those three names ever being sworn in to testify during the specified period. His reaction was that the story was likely to be apocryphal, but he invites others to confirm his result.

Please, no flames.

73,

Paul Morawski, AA3DD

"CBA"--Callbook Address
"CBK"--Callbook, though this abbreviation is less common.

I'd say you can be confident that that is what he meant. If the manager is in the US, be sure to include a SASE (self addressed stamped envelope). If outside the US, include an SAE (self addressed envelope) and something for postage. Some hams send a dollar bill (or two), others send IRCs (International Reply Coupons...available at the Post Office). Personally, I get mint stamps for the country and send an SASE even for foreign addresses...it seems to work very well...and saves the manager from licking stamps or finding ways to exchange dollars or IRCs...a problem in many countries.

The FCC has ruled that it is legal to make a "pizza delivery" type of call
on an autopatch, or just over the air if pizza hut starts monitoring the
local repeater ;-)
but the repeater trustee make the decision as to what use of HIS/HER
gear is permissable. So the local club can say no to "cq pizza"despite
its legality.

I do what Greg does, i.e., buy the stamps and send SASEs to
overseas QSL managers as well as stateside ones. Here is some advice
however: *DON'T* send "green stamps" (i.e., dollar bills) to foreign
hams unless you are *certain* that it is *not illegal* for him/her to
exchange foreign currency. In some countries *possession* of foreign
currency is illegal, so you may not be doing the foreign ham a favor
by sending him money.

Here's a useful checklist which confirms what Greg said and adds
a couple of items:

1) Try and find out if the station has a QSL manager *before*
QSLing direct, even if his address is in the Callbook.

2) For stateside QSL managers, send a SASE and $1.00 with yoiur
QSL. Sometimes they will return the buck, but why not givce
them a monetary pat on the back for providing a useful service?

3) For overseas QSL managers and direct QSLing to the other station,
send a SASE with correct postage in the destination country's
(manager or station, as appropriate) stamps.

4) If stamps cannot be obtained, send the correct number of IRCs as
indicated in the Callbook for the country in question (manager
or station, as appropriate). Remember, however, that while IRCs

are probably not a problem for a foreign QSL manager, a station
may be locted a *long* way from a post office where the ham can
exchange them for stamps, so IRCs can be a pain in the butt.
Always use stamps if you can, and *always* send an envelope
whichever you use.

5) *DO NOT* put ham callsigns on addresses sent overseas! In some
countries, post office worker know what callsigns are and will
open the mail and steal the stamps, IRCs, money, etc., and trash
the QSL card. Use *ONLY* the name and address of the recipient,
and *ONLY* your name and address *EVEN ON THE RETURN ENVELOPE*.
NO CALLSIGNS!

6) As a last resort, or if you want to save money and aren't particularly
anxious for a speedy return (read: You don't mind waiting up to
several *years* for the QSL), or if you can't find the station's
address or a QSL manager, use the QSL Bureau(s). *CAUTION*: This
will *NOT* work if the station was a DXpedition or temporary operation
uring a contest. Usually, they have fairly unique calligns which
differ from those normally issued in the country in question, so
try *really hard* to find a routing.

7) For routings, there is lots of stuff available on BBSs, or buy
the GO LIST, and CQ Magazine does a credible job of listing them,
and you'll find some in the ARRL DX bulletins. But be warned,
sometimes it takes some digging through several sources to find
a particular route (but then, *that's* part of the fun of DXing!)

HF is notoriously unreliable. Even big shortwave broadcasters,
run by governments with lots of land and money, cannot consistently
produce readable signals over that distance. You might buy/borrow
a shortwave radio and see for yourself how reliable signals are.

2484. What good is code ??

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-27 16:57:39 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9502271056.ZM28369@SALCIUS2>
Source record: 251583

Hey no-code techs! (No value judgement implied here...)

Connect to your local DX Packet Cluster and see what proportion of the DX is in the CW bands, usually in the Extra portion of the CW bands. I'd say that about 2/3 of the DX is on CW.

I work DX using a low-cost vertical that my neighbors don't complain about. To have the same success rate on SSB I would need a 60 foot tower, a triband beam, and a big inverted vee, plus a building permit and a larger lot.

CW is not glamorous, and it may not be the most efficient mode, but it does have some redeeming qualities:

1. The antennas don't have to be very big to get satisfactory results on CW.
2. You don't need to re-wire your house to power a 2 kW linear amplifier.
3. There are LOTS of DX stations out there on CW.
4. Many of the DX CW operators can send NAME, QTH, RST even though they can't SPEAK English at all.
5. There's not as much intentional QRM on CW.
6. The CW bands don't seem nearly as crowded as the SSB bands once you get decent IF filters.
7. You get a higher QSL return rate from CW operators than from SSB operators.

The easiest way for U.S. hams to get DXCC is to get an Extra license and use CW. You can also ragchew with the DX without getting clobbered by DX-chasers.

I think the no-code tech license has been a tremendous boost to ham radio. Maybe the average age of U.S. hams is finally below 60 !!! There's lots of cool things you can do with a tech license besides sending packet messages and carrying an HT around. For instance you can work lots of DX on Oscar-13, which is more polite and uncrowded than the HF bands. Or you can do ATV, EME, tropo, meteor scatter, 10 GHz mountaintopping, etc.

I'm an Extra class ham, and I think techs should have more HF privileges. But there would still be lots of stations working exotic DX on CW even if there was a no-code Extra license.

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.policy,rec.radio.amateur.misc

I live about 25 miles from my job, out in the country. At work, we have a 128Kbps ISDN line coming in to our TCP/IP network. I spoke with my boss and he had no problem letting me connect to the net from home on a 24 hour a day basis. The problem is, where I live the phone company doesn't supply ISDN. I don't want a slow 14.4kbps link (I'm too used to the nice, fast connection at work :-)), so a regular phone line is out (plus, the phone company charges me extra just for a regular phone line!). Well...

Can I set up a WA4DSY 56kbps modem on both ends, and set up a 24 hour a day, 7 day a week internet connection for myself? This is mainly for personal reasons, although that doesn't mean I won't check on things at work from home (I'm a network coordinator at work), or download some files for work at home on the weekends, but probably 95% of everything done on that link would be for my personal enjoyment. I was thinking of using the 10gHz band for this link.

Does the FCC allow this type of transmission? Can I do it, but with restrictions? If so, what are they? If there are no restrictions, please tell me. If this is a FAQ, please excuse me. Email me if this is of no interest to others in this newsgroup. *** Followup to rec.radio.amateur.misc. ***

Thanks in advance.

I believe it began during the mid sixties with a club in southern
California. The intent was to promote use of the 10 meter band
during a time when there was fear that it would be lost in the
same way 11 meters was lost (CB used to be amateur 11 meters).
You have to make contact with 10 members on 10 meters and you can
join the club. It goes on from there as a perpetual contest to
collect member numbers and get "awards". There are chapters
all around the US and I presume in other countries. I was active
and participated in 10-10 nets for a short while.

I still feel it's wrong to do, even if the FCC relaxed the ruling.
I really feel what I see here is an eventual deregulation by the FCC
of the Amateur Radio Service. Perhaps they won't deregulate it because
of the global effect it would have, but it's just looking like it will.

The only advantage I can see, in ordering a pizza (where the old ruling
was only for fire camps or disaster relief) via autopatch, is if all the
phone lines went down, and the only lines up ARE autopatch.

Anyway, just a thought, but I got my license back in 1989 and I just
like the old way better.

Tom

2493. Novice questions

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-27 19:09:55 UTC
From: jbadger@poplar110.cray.com
Message-ID: <1995Feb27.130955.972@driftwood.cray.com>
Source record: 251592

Originator: jbadger@poplar110

For some time now I've enjoyed listening on an old sony sw receiver I have and on my scanner (mostly 2m/70cm). I've finally decided to go for my novice and tech licenses (yes, I plan to learn code AND use it). I've got some first radio questions for the experienced hams out there.

Bill Welsh W6DDB said in CQ (Mar. 95), "Tranceivers are primarily designed to provide mobile voice communications; they are not primarily designed to provide code (A1A radiotelegraphy) communication capability." I can understand why he says this after reading his explanation of VOX controls when using CW but He goes on to say that most transceivers are never mounted in a vehicle.

Well, I'm confused! What is a beginner to do if he's interested in DX on both CW and voice?

1. It looks like the most affordable (new) pre-fab equipment is 2m and dual-band HT's but 2m seems rather limited to me. Isn't 2m mostly local, short-range comm thru local repeaters? (I have heard locals trying DX when conditions permit, mostly late at night)

2. Would it be wise to start out with a full coverage rig (160-10 meter, new or used) or something simpler. I'm willing and capable of trying my hand at building some of my equipment but don't know what the investment in test equipment would be(?).

3. What about VHF/UHV operation with transverters? Are these still used?

4. What about 6 meter operation? I've noticed that several manufacturers are offering 160-10+6m equipment lately.

5. What about o/p power? Does lower freqs neccessarily mean higher power requirements?

Thanks in advance! (My next stop is the local radio shop and ham club.)

Jon

: interpret the law?

No, Bob, I think what we have here is something else. There is a big
difference between an *individual* having a non-type accepted radio in
his possession, and a *commercial operation* providing customers with
non-type-accepted radios (even indirectly).

As a ham, my equipment doesn't have to be type accepted and the FCC isn't
going to come checking (unless I use it out-of-band). But as soon as I
start selling radios to other people, I become subject to an entirely
different set of rules.

From: jon@uci.uci.com
Message-ID: <3it9eo$5hs@uci.uci.com>
Source record: 251595

An experimental mail reflector which identifies callsigns within a message can be accessed by sending mail to callsign@uci.com. Your message will be returned with the country of each callsign append right after the callsign.

For example, if the message:

A32AAA DE PY3AAA K

is sent to callsign@uci.com, this message will be returned:

A32AAA[Tonga] DE PY3AAA[Rio Gran de do Sul Brazil] K

Grid locator squares are also identified and translated to latitude and longitude.

I would appreciate input in these areas:

1) The analyzer may not be up to date wrt the changes in Eastern Europe, and recent changes in general.

2) Whether the oblast information for the former USSR is still accurate. I would like to hear from someone who is knowledgable in this area.

3) Location or other information that is reflected in a country's callsigns. So far I have this information for Argentina, Brazil, Mexico and Sweden. Canada is an obvious candidate; I just haven't done it. Any others?

The source code is available via gopher at gopher.uci.com under the "Software Sources" directory with the name "call_analyzer.tar <Bin>"

Hi Waldemar, make 10 contacts on 10 meters with 10-10 club members and
you can become a member with your own 10-10 number. Mine is 65752 so
you can see there are tens of thousands of members.

I have had my FT530 for almost 6 mos. "Graduated" from an ICOM W21AT. I love my ICOM, but the keypad is way too tiny. Yaesu-ese is understandable - you don't have to be a rocket scientist to understand it! Quite popular here in 9-land.

2499. Cease Fire into Peact Treaty

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-27 20:56:41 UTC
From: davev@atkc.COM
Message-ID: <9502272056.AA28439@venus.atkc.com>
Source record: 251598

In the last week, we have had a cease fire in rec.radio.amateur.misc. While there has been sporadic flamings, by and large the cease fire has held, and I think the vast majority of us have immensely enjoyed it.

We have the opportunity to turn this lull in the firing into a permanent peace if we resolve now to do so.

The process is very simple. We change rec.radio.amateur.misc to have only four acceptable types of postings:

1) Requests by individuals for information on amateur radio related topics.

2) Answers to requests for information.

3) General announcements of information for the amateur radio public. (Example: the Royal Society of Great Britain's postings)

4) Followups which give corrections to informational posted.

The key word in all of these types of postings is information. Not flame baits. Not personal attacks.

Unacceptable posts would include

* Attacks on .signature quotes

* Attacks on politics unrelated to govermental action directly affecting amateur radio.

* Attacks on any license class

* Attacks on any method of examination

* Attacks on any emission type.

* Anything that declares that a section of the amateur radio community which is obeying the laws of their governing bureau (for example the U.S.'s F.C.C.) is wrong or not a full member of that community or old fashioned or out of step with the times, etc.

All violations, even if they espouse opinions that you believe, should not be considered as acceptable. All enforcement should be by confidential e-mail message to the offending party, or by ignoring them if they do not profit from gentle corrections. Postings which highlight offenses will only lead to further offenses.

How about it? All of you that like signals instead of noise, please say "Aye."

2501. Re: Online Service Killing Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-27 21:00:48 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <3itei0$kn1@orion.aoc.nrao.edu>
Source record: 251600

Mike Simpkins <HyperMike@aol.com> made a number of comments about ham radio, contending that online services are killing the amateur radio service. I could not disagree more.

From the lack of a callsign in his signature and from the fact that I cannot find him in the online callserver, I presume it is a safe assumption that he is not a licensed amateur. For that reason, I would suggest that much of what he says may stem from ignorance of what the amateur radio service is all about, rather than from malice. Therefore, a reasoned response, rather than reactive flaming, is called for. In addition, others similarly unfamiliar with amateur radio also may hold such views, so it is useful to answer his points.

First, Mr. Simpkins strayed from his theme to make some generalized accusations about elitism, exclusivity and bigotry among amateurs. The worst of his accusations is that of racism. I find this completely without justification. In nearly four years on the air, in hundreds and possibly thousands of QSOs on all bands from 160 meters to 70 cm, I never have heard another ham make a racist remark. Now, certainly, there are areas of 75 meters and possibly of 20 meters where one could find some bigoted rantings, but those people are a very small percentage of amateurs and not representative of the amateur community. Most of us avoid those frequencies and let that small minority talk to themselves. The service as a whole should not be judged on the basis of a small, unrepresentative minority. One could look at nearly any hobby or activity and find a few bad apples.

Though I'm sure some do, I don't personally know any hams who chew tobacco.

Mr. Simpkins contends that amateur radio "has made few concessions for accessibility issues with those who are either deaf or those with speech impediments." This is completely false. Even a completely deaf person can pass a Morse Code test. Higher-speed code tests can be waived by doctor's certificate. Accommodations include blinking lights or tactile stimulators to allow the deaf person to pass the test. On the air, the deaf and speech impaired can use a wide variety of modes, including packet, AMTOR, PACTOR, RTTY, and amateur television. These modes can be used on HF, VHF, UHF and amateur microwave bands, and offer a rewarding, lifetime hobby for their practitioners.

Now, to the basic theme of Mr. Simpkins' post -- that online services render amateur radio obsolete. This contention overlooks

the principal difference between such services and amateur radio. When using an online service or the Internet, you are a consumer; when using amateur radio, you are a participant.

A week or so ago, I worked stations in Europe, South America, Africa and China. I was using a 5-watt transmitter and a wire antenna. That was enjoyable, rewarding and satisfying. Now, I could have sent e-mail to most of those countries, looked at Web pages from many of them, or picked up the telephone and talked to someone in each of them. As any ham knows, that just wouldn't be the same thing. As long as people find it exciting to do such things with equipment in their own homes, without the benefit of untold thousands of technicians maintaining their network links, amateur radio will have a place as a rewarding pastime.

If Mr. Simpkins or anyone else cannot understand the difference between amateur radio and use of commercial communication services, they should find a local ham and ask to sit in while the ham makes some contacts, perhaps on HF, VHF weak-signal, or via amateur satellites. I'm sure that few people will go away from such an experience without knowing the difference.

Though many hams did indeed memorize their way to a license, they at least learned something. Even amateur "appliance operators" probably know more about their radio and how it works than the vast majority of home computer users know about their machine.

Another role amateur radio has to play is in education. It provides the crucial element of hands-on experience for young and old alike who want to explore the world of science and technology. I work in an environment filled with scientists and engineers -- and many of them will happily tell you they were first inspired toward their careers by amateur radio. Most people who pursue careers in science and engineering will agree that what gets young people excited about these fields is not reading or listening to lectures, but actually getting your hands on some equipment and making it work. Amateur radio is an excellent way to encourage budding technical professionals.

Amateur radio not only helps young people enter technical careers, but it also serves as a vital interface between people in technical careers and those in non-technical careers. Since the world is an increasingly-technical place, anything we can do to improve the technical literacy of the workforce is good for the nation. In our local licensing classes, we've consistently drawn people with no technical background at all who develop a curiosity about not only radio but other technical subjects. In this way, ham radio has expanded their intellectual horizons and possibly made them better workers, managers and voters.

I'm glad that Mr. Simpkins at least acknowledges that ham radio still has a role to play in emergencies. Though online services

can sometimes contribute to communications in an emergency, amateur radio will be a valuable resource in emergencies for many years to come. Its value comes from the fact that hams who prepare themselves for emergency service are a completely self-sufficient communications resource. Commercial services still largely rely on a surviving infrastructure; hams plan to work without infrastructure.

The evidence contradicts the assertion that amateur radio's numbers are dwindling. With the no-code license, the service is growing at a healthy rate, and those who enter by this route are participating in public-service events, serving in their local clubs, and upgrading their licenses in large numbers. As the use of new digital modes and the numbers of amateur satellites increase, the scope of amateur participation and experimentation increase. New manufacturers offering ham gear, new ham publications, new ham stores and swelling local radio clubs are hardly the sign of a dying hobby.

Finally, try to say that amateur radio is obsolete to a classroom full of schoolkids who just talked to an astronaut aboard the Space Shuttle on 2 meters.

Dave Finley, N1IRZ

2502. Sending test instead of recieve

Newsgroup: rec.radio.amateur.misc

From: delaney@j51.com
Message-ID: <3itgk4$4am@tzlink.j51.com>
Source record: 251601

I'm a Tech. (been for 3 years) And during that time I've tried to "learn" morse code. I have a learning disability that make hearing the code strings very hard. I can actully learn the code and if I see it is not a problem, but I can't distingush the strings of code. I know that a sending test can be substuted for the standerd recieving test. I think that would not be a problem for me. What do I need to do to get the change to a sending test at a VE session. Do I just need to take a letter from doctor to them, or do I send it to the FCC, or what? I would love to be able to decode the code as I hear it, but I can't. Is there also a testing mod that it can be reduced to more spacing between each letter? The problem I have is that I can hear the code, but by the time I become aware of what I heard, I've already missed the next character or two. (Like if someone says something to me, I say "what?" and then a sec or two later realise what they said to me) I think it might be Attention Deficit Disorder. I have no trouble with the written exams (I passed the tech 54/55), and I could eaSlly goto the extra class, it's just the code that stops me, and it is really fustrating to not be able to do it.
ANY help would be extreamlly appricated.

> jumper 13 needs to be desoldered. Anybody know which one of these is true?
> Email me or post here, Thanks
>

Yes that's the Green wire. If you took apart the radio as per the mod instructions, you will see the green wire connects to the jumpers the original mod tells you to unsolder. All you need to do is to cut the geen wire (I cut 1/4" from the center and put heat shrink over the ends) and put heat shrink or as someone suggested to me a drop of glue over the ends.

You may also be able to access the wire by only removing the bottom plate (where the battery contacts are) and getting to the wire from there. I took apart the whole radio as per the old mod. You also need to reset the radio as per the mod after completion.

If your not sure of what mod I am refering to, It's the one from the oakland ftp site. I just substitiuted the green wire cutting part instead of unsoldering the jumper. I guess Yeasu go tired of repairing botched circuit boards and put in the wire.

Remember to cut the correct green wire, my radio had a couple, but only one in the area of the mode and the wire is streatched out and unsoldered from one end would be about 3" long.

Regards

Ken

Text deleted.

I am far away from the controversy, but am curious about it. The reply by K1MAN ignored the most pressing question that I have:

How can anyone "claim" a frequency?

If I were to be on the frequency used by K1MAN ten minutes before he began his talk show, wouldhe alow me to continue my contact or would he expect me to get off the air. It is my understanding he would expect me to get off, and if that is true, I would side with those who disagree with him. Perhaps you could clarify for me.

You should thank us for providing a non-coded license for you!

Seriously, 1 to 2 weeks of 15-minute daily study will get you easily up
to 5wpm so you can get HF privileges. Then you can conduct your own
propagation experiments.

>The question I face is whether or not it is worth the time and
>effort to learn a
>cumbersome, antiquated, inefficient, time-wasting, Stone Age mode of
>expression in a world that has entered the Information Age.

Depends upon how badly you want to get on HF. Watch 15 minutes less
TV each evening for two weeks to get your code speed to 5wpm and
a whole new world of radio will await you.

Antiquated mode? I'm beginning to think that these folks who keep chanting
this do not have access to an HF receiver. They just keep mimicing what
others on here (also apparently without an HF rcvr) also chant.

> It is, of course, a question
>of personal
>preferences, but I'm beginning to think that the privilege awarded by
>passing the code test,
>which would be to talk to other hams who can operate on HF, may not be
>worth it--

15 minutes less TV daily for 2 weeks to gain worldwide communications
may not be worth it? You must value your TV-watching more than wanting
to get on HF! Okay, then just practice the code during commercials.
Certainly you don't think more highly of commercials than learning the
code, right? Right??

>But on the other hand, you must be a master of logic, and I, a dim-witted
>buffoon,

No, I would go that far; but maybe your priorities need adjustment.

>Arrogance, ignorance and intolerance are behind almost every evil known to
>man.

The most evil in our society are the criminals killing innocents in the
streets - which catagory above do they fit into?

: : : : amateur radio station?

: : : The very question locks you into an answer! Anyone operating a club
: : : *station* must use the club *station callsign*. Period. But that's
: : : not really your question ...

: I think that is totally false. As long as I am a licensed ham, I can
: operate any "station" using my own ham callsign...including a club
: station. I can operate at a friend's home or anywhere in the USA
: as K2UNK using the friend's home station, an HT or whatever.

: Indeed, today's current FCC licenses no longer specify any station
: license at all.

The FCC no longer specifies any station *location* at all. The
station license is specified in spades - by the callsign entered on
it.

What you say is quite true, as far as it goes, but you may be missing
my point. I think we've long since entered semantics. Let me
clarify. Every amateur station (as well as every amateur control
operator) must be licensed. If you are using someone's station, you
are the control operator, but the other person is the station licensee
- that being the case, you have to use the callsign on his station
license, not yours. If, rather than using his station, you simply
borrow his equipment, you are both the control operator and the
station licensee, so you use your callsign. Which it is alters such
things as who gets the QSL, who gets the FCC citation, and so on.
Whether you borrow his equipment or use his station depends *entirely
upon him*. It's his call (so to speak!), not yours. Borrowing
equipment is very common, and quite legal, but if he says he doesn't
want you to use your callsign, for whatever reason, you have to use
his and not yours - after all, it's his radio. He can do that.

Technically, if you're using someone else's station, you by definition
cannot be using your callsign, because every station must identify
with its own assigned call. If you use your call, it's really your
station, even if it's someone else's radio.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 FEBRUARY AND FORECAST FOR 28 FEBRUARY - 02 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 88/32

GOES satellite data for 26 Feb
Daily Proton Fluence >1 MeV: 3.5E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.9E+06 (normal)
X-ray background: A4.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Feb 01 Mar 02 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Feb: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled with active levels
12-15 UT and 18-24 UT.

Estimated Indices : A K Observed A Index 26 Feb
Learmonth 19 3333 4344
Fredericksburg 20 11
Planetary 23 12

Observed Kp for 26 Feb: 1343 3323
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Feb 20 Mostly unsettled to active with isolated minor
storm levels possible.
01 Mar 15 Unsettled
02 Mar 10 Quiet to unsettled

COMMENT: IPS Geomagnetic Warning No 5 will be issued shortly.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Feb fair-normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Feb fair-normal fair-normal poor-fair
01 Mar fair-normal fair-normal fair-normal
02 Mar normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
27 Feb 10 Near predicted monthly values with sporadic E
observed 07-08 UT, 13 UT and 21 UT.

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
28 Feb -15 Near predicted monthly values to 30%
depressed. Sporadic E and spread F
may affect night circuits in particular.
01 Mar 15 Near predicted monthly values
02 Mar 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning No 8 will be issued
shortly. MUFs at Townsville were depressed 20-30% 00-09 UT,
then near predicted monthly values. Sporadic E observed
01-03 UT and 18-19 UT. Hobart MUFs were near predicted monthly
values with spread F observed 09-18 UT.

2513. PC Boards Needed For Homebrew Project

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-28 00:16:27 UTC
From: magliaco@pilot.njin.net
Message-ID: <3itq0r$sbd@pilot.njin.net>
Source record: 251612

I developed a neat ham radio related project last year using perforated circuit board construction techniques. Although the project works fine for me, there are others who would like to duplicate the project. I may want to make kits available due to the interest in this project.

Are there any (low-cost) ways of having PC boards made up these days? I used an old version of OrCAD to prepare schematics for the project. In fact, it's drawn as four separate drawings. My version of OrCAD doesn't generate PC boards. :-(

By the way, we're looking at a circuit with 12 chips, most are 14 pin DIPs, one 16, and one 8, about 90 1/4-watt resistors, and about 20 small caps. The circuit works in the AF range, so the board material and parts placement isn't very critical.

Any hints?

Thanks in advance.

73, de John, KD2BD

>

First off, there is no such thing as an "illegally modified rig" when the

service in Amateur Radio. We can do ANYTHING we LIKE when it comes to the frequency coverage, totally legal. That pretty much burns your ass dosent it Dave?

Go re-read part 97...there's a reason Amateurs are given this latitude in the service of their country. There's also a little matter of having signed
for a license that keeps most hams away from illegal activities, the FCC knows just exactly where we are, and who we are - unlike the 11m crowd.

Then go re-read part 95, and the rest of the Communications Act of 1938 Amnd.
you'll discover that transmitter modifications in MOST radio services are deemed the province of licensed service personnel - only the Amateur Service
is allowed to fiddle and experiment; it's a part of our charter. Face it, CB
is a radio-user's community...kinda like making toast or running the washer!

Get a life, SoreAss, the reason to modify (for instance) an HF transmitter for full
coverage transmit, is to permit the transmitter to be used as a RF signal generator! Something *you* wouldn't understand the real usefulness of unless
you regularly service radio gear!

As for transmitting on frequencies not autorized by Part 97, hams are also
forbidden to do so, but they are not forbidden to modify their equipment to
do so; the crime dosent exist until they actually key up on-the-air! For CBers
ANY MODIFICATIONS made to the transmitter render the equipment unfit for service because it is now NON TYPE-ACCEPTED! Get this thru your heads people!

The mere possession of non type-accepted equipment by a CBer is a crime, the
FCC views the ownership of such things as an RCi-2950 or a linear amp as being
evidence of use. Call the FCC in Gettysburg and ask them! A Field Engineer can
confiscate your non type-accepted equipment under the laws contained in

Part
95 and you have no recourse whatsoever! Face it, on 11m you're a user, an
appliance operator, just like the users of Marine Band radios, just like
the
average cellular telephone user.

-- -- --

Excuse me, but some of us here are lawabiding citizens and the very notion
of tolerating the perpetration of a FELONY smacks of irresponsibility! If
you want to go on record here as being in favor of allowing someone to do
a felony, right out in the open - then I would suggest that you are *not*
a lawabiding citizen...perhaps you are a criminal, or perhaps you are a
criminal-behaviour tolerant individual.

In any case, I seriously doubt that aol would like to discover that one
of their customers was abusing his or her access to the Internet by being
in essence, a criminal co-conspirator, and that is exactly what the laws
regarding such behaviour describe.

Additionally I'd like to point out that the name of this group is

'rec.radio.cb'

And the charter includes many things, but not one of them has anything to

do with illegal activities. For those sorts of things, you should be
reading
'rec.radio.pirate'. Also..do yourself -and the group- a favor, read the
FAQ.
Linear amps are a discussed no-no. Plain and simple, Honey - You're out of
line here! You ignorant gas-pumping scum!!!!!!!!!!!

>them for sale for "export only".
>
No. Linear Amps capable of operating in the 25-28 MHZ region, even if
they
are designed for export sales, must carry a type-acceptance cert or they
are
declared to be contraban.

Henry Radio Inc makes amps that will do 1, 2, 3, 4, 5 or 8 KWatts out on
these
frequencies...but they ARE type-accepted and cannot be sold in the US.
There
is
a special audit that takes place on these sorts of manufacturing outlets
on a
yearly basis.

The junk that Mr. David Paul was offering was the typical
transistor-trash
that passes for a linear amp on the CB band...and BTW, I dont think you
guys
can make a real case for asking someone to leave this newsgroup, just

because
they happen to have an Amateur Radio License in addition to being and
having-
been a CBer...matter of fact is that some of us have been doing CB since
some
of you younger-folk were having 'Mom" for 3 meals a day! I went through
the
Impression; you didn't!!!!!

So respect yer Elders...ya hear, snotnose!

Uhm Andy, hams are allowed to modify their gear, build and modify transmitters
in any combination of frequencies BECAUSE learning the science of radio and
experimenting is a part of the Amateur Service's charter! We're actually
encouraged to do so. CB is a utility/user service, and such tinkerings
are not a part of it. As for me unsubscribing, nope, I'm calling to task
everyone of the freebanders, bootleggers, linear sellers, linear and non-
type approved users and I'm saying, POINT BLANK: Get out of here! This is a
newsgroup chartered to discuss legal CB ops, rigs and etcetra. NOT the illegal
stuff! And if those aforementioned disagree, hey, not my problem!

Either change the charter, create an alt group for the illegal stuff or
just quit bitching when a law-abiding CBer, such as myself, pounces on the
people that are going beyond the charter. Plain and simple. The FAQ is here
once a month and that's part of our charter too!

The lame ass wannabee's can go charter their own radio group! Call it:

'alt.radio.wannabees' or: 'alt.radio.criminals' or just
alt.dumb.ass.cb'ers' or maybe 'stupid.gas-pumping.CBer's

|>basis. The problem is, where I live the phone company doesn't supply ISDN.
|>I don't want a slow 14.4kbps link (I'm too used to the nice, fast connection
|>at work :-)), so a regular phone line is out (plus, the phone company charges
|>me extra just for a regular phone line!). Well...
|>
|> Can I set up a WA4DSY 56kbps modem on both ends, and set up a 24 hour a day,
|>7 day a week internet connection for myself? This is mainly for personal
|>reasons, although that doesn't mean I won't check on things at work from home
|>(I'm a network coordinator at work), or download some files for work at home
|>on the weekends, but probably 95% of everything done on that link would be
|>for my personal enjoyment. I was thinking of using the 10gHz band for this link.

I would say that if the things you are doing for work are part of your
ordinary job and not directly related to an emergency threatening the
life or safety of person or property that you'd have a pecuniary interest
in the communications. In other words, the communication link is allowing
you to perform work over the amateur bands. That would be illegal. So
in your above scenario, you'd be legal 95% of the time. ;-)

It would be similar to a pizza place setting up an order line on 2 meters.
The FCC has already said specifically that such transmissions are
illegal.

|> Does the FCC allow this type of transmission? Can I do it, but with
|>restrictions? If so, what are they? If there are no restrictions, please tell
|>me. If this is a FAQ, please excuse me. Email me if this is of no interest to
|>others in this newsgroup. *** Followup to rec.radio.amateur.misc. ***

The restrictions are on content, not method. You can easily set up the kind
of link you described in the band you desired. But you can't conduct work
over that link.

N9MWB paid for it.

2518. AA1ME

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-28 01:37:53 UTC
From: Charles.R.Hohenstein.1@nd.edu
Message-ID: <Charles.R.Hohenstein.1-2702952037530001@mac18.debartolo.lab.nd.edu>
Source record: 251617

Does anyone have an address for AA1ME? I have already tried the QRZ database via WWW, not to mention the 1995 Callbook, but apparently the call is too new to be listed.

I am also looking for:

kg4an (no address found)
w4ma (no address found)
kt7aaa (no address found)
ki7c (no address found)
ke4gy (mail returned from: 15518 BALDSWELLE DR, TOMBALL, TX 77375)
kd4pvm (mail returned from: RT 1 BOX 299, HOPE MILLS, NC 28348)
n4wnl (mail returned from: 713 PATRICIA LN., OXFORD, AL 36203)
n7uvh (mail returned from: POB 786, POST FALLS, ID 83854)

Does the League ever release address information from the QST mailing list? It would be a valuable service, especially in the case of hams who have neglected to update their addresses with the FCC--perhaps the League could even send a reminder to the ham in question, along with a form 610.

No on both counts, actually. I shant be dragging it out, and my life is rather busy and full. And by the way, you seem to have just as much time available at the keys as I answering. Why aren't you on the radio, or outdoors? It's very cold (up to 13F) and snowy here, so I might have some sort of excuse for sitting inside and rapping the keys, but Hawaii must be nicer than here...

> You should use your time more wisely by studying for your upgrade.

I won't be upgrading anymore. On the same note, when are you taking your next test?

> How does one ``do some continuous wave''?

One needs a surfboard- I thought you Hawaiians knew that.

But seriously (is that the message form? funny answer, followed by serious reply)- you will note that I was quoting other people, not myself... That seems to be the form of the question- "Will you be around later to do some CW?" Honest- I didn't make it up. I figure out they mean code, and we end up beeping at one another. I most often do code in CW, although a couple of us are trying to get some code practice going for the techs on FM, and are playing with a couple designs for a little club construction project for the beeper(s). Several birds dead with one projectile.

Would this be so bad? Does quantity insure quality? Back in 1979
we were *given* 3 new HF bands at the World Administrative Radio Conference.
No one was taking any frequencies away even though our growth rate
was not what it is today. Someone over on .policy feared that without
the present rate of growth ``...we wouldn't have Icom, Yaesu, and
Kenwood making such nice radios for us.'' So what? What does he think
we used prior to those three companies coming into being? Many of
us were building our own radios. (Oh my gosh! I said the B-word!)

I'm too tired to think of a conclusion to this post...

Hi Bob,
When replying check to see if the previous poster put something in the
``Follow-To:'' line. I've been trying to remember to append
rec.radio.amateur.policy to the code debate articles to get
them off of .misc. Sometimes someone on .policy sends them
back over here after some editing (possibly some of your remarks
get edited off).

>from doctor to them, or do I send it to the FCC, or what? I would love to

Hi Richard, a friend of mine upgraded from Novice to either General or
Advanced (I forget which) by getting a doctor's letter and finding a
VE who would give him the CW waiver. Your problem sounds similar to
his. He has a genius level IQ, a commercial radio license, and has
forgotten more than I will ever know about radio. It's a shame that
he was barred from the HF bands for 20 years because of a disability.
It's people like you and he who made me change my mind about CW testing.

Note that you must pass the 5wpm receiving test before getting a waiver.
Go figure that one. A deaf person must pass 5wpm before getting a waiver.
I, and some other VE's, allow visual copy for the 5wpm test. I even
rigged a vibrator to one deaf guy's ear so he could meet the letter of
the treaty, "copying CW by ear". :-)

Please direct any followup to rec.radio.amateur.policy

Maybe :)

I think the way it works is that your reply or followup gets appended onto the thread of the original message, thereby not being "from" you fully but partially. This message should serve as an example as it will have you as the author but an article appended from me.

At least that's my view :) I could be wrong.

Body handling: HTML body converted to readable text

It astounds me at how the FCC could be so willing to jump in the middle of this ham dealer for such a thing, and completely close it's eyes to the thousands of cb shops who sell "cb" radios that have been modified to operate outside the legal 40 cb channels and at illegal power levels. You can hear this idots all the way from 26.0 mhz up into the 10 meter band. If this ham dealer can be fined for merely offering the information, how do these cb dealers continually get away with it?

Dave van De Kerk (davev@atkc.COM) recently wrote
in <9502272056.AA28439@venus.atkc.com>:

: In the last week, we have had a cease fire in rec.radio.amateur.misc.
: While there has been sporadic flamings, by and large the cease fire
: has held, and I think the vast majority of us have immensely enjoyed
: it.

: We have the opportunity to turn this lull in the firing into a permanent
: peace if we resolve now to do so.

: The process is very simple. We change rec.radio.amateur.misc to have
: only four acceptable types of postings:

For those who are offended by some of the more colorful postings here in
rec.radio.amateur.misc I reccomend that you unsubscribe and get your
information from a moderated group such as rec.radio.amateur.info

The rest of us do not need a net censor to tell us what and how to phrase
our posts. If one really wants to be a net cop maybe you should learn the
ropes on alt.config or even clean up the local '435' 2meter repeater.

Lets leave these groups open to all discussion....where is the Charter?
It was around here sometime ago...

Just as there are good battles on our amateur radio nets and repeaters,
there should be the same types of discussions here in our news groups.
While I may disagree with some of our net personalities, I still enjoy
their discussions and amusing anecdotes.

2543. RFI on 28Mhz from RS phone answerer

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-28 14:09:12 UTC
From: aswNS@hamp.hampshire.edu
Message-ID: <3ivaq8$u3v@gort.oit.umass.edu>
Source record: 251542

I recently acquired a Radio Shack model 43-741 telephone answering machine, and found it causes a strong set of signals centered on about 28.160 Mhz that make it hard to hear anything in the upper half of the 10 meter Novice c.w. band. The signal seems to be radiated by both the d.c. power line (it is powered by a wall transformer) and the phone line. Putting ferrite cores on these lines helps a bit, but the signal is still pretty strong.

I wonder if anyone out there has experienced this and figured out a fix, or gotten any satisfaction from Radio Shack on getting it repaired. This is very much a consumer device (no circuit in the users manual); I have tried to look at the circuit board to figure out where a few bypass capacitors might help, but I couldn't make any improvement.

I used to subscribe to the QRP mailing list. I want to
rescribe and I cannot find the correct address to send the
subscribe request to. I thought it was Majordomo@think.com
but I tried and the lists command does not show the
QRP list. Does anyone know. Thanks Steve WV6U

2545. Re: Spark vs. C.W. - Historical notes

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-28 14:54:42 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.793983282@melpar>
Source record: 251544

To David Tiller:

"Damped" waves are, indeed, spark. I dug through my old books
last night and, sadly, my 1922 "Radio Amateur's Handbook" by
A. Frederick Collins (not the ARRL Handbook, BTW) has a *terrible*
description of the theory of spark transmission. However, my 1922
"Stndard Handbook for Electrical Engineers" has quite a good section
on Radiotelegraphy and the "Wireless Telephone," as it is referred to.

Here is an excerpt from paragrph 287, page 1756:

"287. Advantages of undamped oscillations. Oscillations produced from the
electric spark form damped wave trains with intervals between in which
no energy is given off. If, instead of supplying energy merely at the
beginning of the wave train, a constant source of supply can be obtained,
the ocillationswill continue indefinitely and with equal amplitude. The
use of such undamped oscillations in radio communication has a number of
advantages; first, if energy is divided among a great number of waves of
equal amplitude, instead of being concentrated ina few wave trains, the
maximum voltages required for a given amount of power are very much less
than in the case of damped waves, and consequently the insultaion of the
apparatusis much less difficult, and much larger amounts of energy can be
sent out from moderate sized antennas. Second, undamped oscillations
allow a greater sharpness of tuning and enable a looseness of coupling to
be used at the receiving station between the antenna and secondary which
greatly reduces the danger of interference and disturbance from
atmospheric discharges."

The text then goes on to discuss the generation of undamped waves
by use of arc transmission (such as the Poulsen arc). Vacuum-tube
generation of undamped waves is mentioned but not described as to
circuit theory, whereas arc transmission is described in some detail;
(remember that this was probably written in 1920 or 1921 in order to
appear in the 1922 edition).

I have purchased several radios and accessories from Oklahoma
Comm Center in the last few months. I have been very happy with
the prices and service. They do what they say they are going to do.
Also, their prices usually include shipping. Check out their prices
on Astron power supplies. They were about $20 cheaper than AES.

You can do it 95% of the time.

No you may not use it to contact your work files.
there are limits on what you can ftp also.

Basically this is not allowed.I am currently running a net gate.
also sat gate
It just doesn't work for this type of situation.

you just think your running 56 k
actually with bad packets and retries it is less than 14.4 more like 4800

try it you will see.

>financial stake in it, it's OK.

MV>However, a couple of weeks ago, I was at a ham meeting where everyone
>insisted that calling for a pizza was *NOT* OK.

MV>Who's "clue challenged"? Them, or me?

As far as the FCC's concerned, you CAN now use an autopatch to call in
for your own pizza, but you can't do it if you work for the pizza shop
and are calling orders in.

However, it's up to the trustee of the repeater as to what types of
operation he/she permits on the machine. Therefore, if the trustee
decides that ordeing your pizza via the autopatch is off limits, then
you're pretty much bound to that decision. The trustee IS responsible
for the operation of the repeater, and he/she takes the 'hit' if there
is a problem.

2561. GB2RS News 26th February 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-28 19:10:35 UTC
From: dave@llondel.demon.co.uk
Message-ID: <794023835snx@llondel.demon.co.uk>
Source record: 251480
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

{ Better late than never I suppose :-(}
Good morning. It's Sunday the 26th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First, the headlines:

Amateur radio links up with a major educational and scientific project this week.

And there will be no early release of 'G' vehicle registration marks to radio amateurs.

The British Geological Survey in Nottingham and the Merseyside Maritime Museum, Liverpool, will be hosts to special event stations GB0JAS, GB2JAS and GB6JAS starting this week. The event is part of the 'JASON Project - (Expedition Island Earth)', an annual scientific expedition involving Dr Bob Ballard, who discovered the Titanic wreck, and a team of scientists and students. The team is now exploring the volcanic islands of Hawaii, and NASA technology will be used to look back at Earth from outer space. Daily satellite broadcasts will bring the project live to centres in the USA, Canada, Bermuda and the UK, where schools, colleges and the public will be able to see science in action.

The special event stations are setting up skeds with research vessels, remote research stations and other JASON Project stations. GB2JAS in Liverpool will start operations tomorrow, Monday the 27th of February and will be active weekday evenings and all day on Saturdays until the 11th of March. At Nottingham, GB0JAS will operate from the 5th to the 11th of March on HF, while GB6JAS will use the 6-metre, 2-metre and 70-centimetre bands. A special aim of the JASON special event stations is to encourage a greater interest in the UK Novice Licence scheme and there will be Novices operating the stations from time to time.

Anyone wanting skeds, or who is able to help, should contact Jim Anderson, G0TDK, 104 Mab Lane, West Derby, Liverpool L12 6RL, or Alan Clayton, G7HZZ, in Nottingham on 0115 921 2857 (evenings).

The Kuwait National and Liberation Days are being celebrated this weekend, and Kuwaiti stations may add the suffix stroke NLD after their callsigns until the end of the month. The Kuwait Amateur Radio Society is offering an award to amateurs who contact three Kuwaiti stations during this period. The K.A.R.S. club station, 9K2RA/NLD, will be active and counts as two contacts. The award is also available on a heard basis for SWLs.

Over the last eighteen months, the RSGB has had four meetings with officials of the Sale of Marks division of the Driver and Vehicle Licensing Agency in Swansea and London, in an attempt to set up the much-discussed scheme to offer radio amateurs an opportunity to purchase a vehicle registration mark corresponding to their callsign.

The Society has recently received a letter from DVLA in which they inform us that they have now concluded their study into the feasibility of a specific and exclusive early release of the 'G' prefix marks to radio amateurs. Unfortunately, for the moment they have decided that such a scheme is not justified. Their reasons for deciding not to proceed now are firstly that to issue the 'G' prefix marks early and exclusively to radio amateurs would require an Act of Parliament, and they have been advised that the Secretary of State for Transport would not, at present, consider presenting such an Act. Secondly, they make the point that their scheme was originally set up by the Department of Transport with the express objective of generating the maximum possible revenue from the sale of such marks. The potential represented by the release next, for example, of the 'B' prefix marks is of the order of 24 million qualifying vehicles, whereas the 'G' prefixes would offer them a potential maximum market of well under half that number. On commercial, as well as legal grounds, therefore, they feel unable at this time to countenance any release of the 'G' prefix marks - even a general release.

They confirm that they remain fully aware of radio amateurs' desire to acquire such marks, as well as of the need to protect amateurs from exploitation by unscrupulous dealers in such marks. They conclude their letter by confirming that, as and when they are ready to consider the release of the 'G' prefix marks, they will be in touch with the Society again to discuss how best the legitimate interests of radio amateurs may be served.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From St Maarten (PJ), K7CI and W7MAP will be active from Wednesday the 1st of March until the 8th of March. Activity will be on all bands, taking in the ARRL SSB contest. Outside the contest activity will be mainly CW.

From Ascension Island, Jim Neiger, N6TJ, is active as ZD8Z from now until Friday the 10th of March, also taking in the ARRL SSB contest. Jim will also operate on 160-metres and his QSL information is via VE3HO.

And from Barbados, W0SA will be active as 8P9NX until Thursday the 2nd of March on CW and RTTY. QSL to his home call.

Next the Rally News:

The Barry Mobile Rally is taking place today, Sunday the 26th February, at the Barry Leisure Centre, off Holton Road, Barry. Doors open at 10.30 am.

Also today, the Taw and Torridge Rally is taking place at Bideford Hall, The Pill, adjacent to Victoria Park, Bideford, North Devon. Doors open at 10.30 am.

Next Saturday, the 4th of March, the Aberystwyth and District Amateur Radio Society will be holding their rally at Aberaeron School, Aberaeron, in Dyfed. Details may be obtained from Katy, GW0SFO on 01545 580675.

On Saturday the 11th and Sunday the 12th of March the RSGB London Amateur Radio and Computer Show will take place at Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, in north London. The event features trade stands, an RSGB bookstall, lectures, special interest groups and a bring and buy. RSGB Morse tests will be available on demand, but don't forget to take two passport-size photographs along if you wish to take your test at the Show. There will be talk-in stations on 2-metres and 70-centimetres, and doors open at 10.00 am with priority admission for the disabled. Further information may be obtained from Steve White, G3ZVW, on 0181 882 5125 and a full Show guide will be published in the March edition of Radio Communication, which is due to be posted to members this week.

Finally, a reminder that the Mid Cheshire Amateur Radio Society has had to cancel its rally, which was planned for Bank Holiday Monday, the 8th of May.

Now for the HF contest news:

Contests taking place this weekend include the REF French SSB contest, which finishes at 1800 UTC this evening, and the Belgian UBA CW contest which finishes at 1300 UTC.

Next weekend, the 4th and 5th of March, the ARRL DX SSB Contest takes place on all HF bands, excluding the WARC bands. The times are 0001 on the Saturday to 2359 on the Sunday. Contact only USA and Canadian stations and send RST followed by your power. Brief rules for all these contests were published in the February RadCom.

Next some VHF contest news:

Today, Sunday the 26th, is another event in the 70MHz Cumulative Contest between 1000 and 1200 UTC. The rules can be found in the January RadCom.

Also today is another event in the Winter Microwaves Cumulative contest, between 0900 and 2100 UTC on all bands from 2.3 GHz up. The rules are in the November 1994 RadCom.

Next weekend, the 4th and 5th of March, the 144 and 432 MHz contest takes place. This is a 24-hour event starting at 1400 UTC on Saturday. The rules can be found in the February RadCom.

Now some HF beacon news:

The experimental South African beacon, ZS6PW, has now finished transmissions on 21.150 MHz. Operation continues on 28.186 MHz.

The Finnish 10-metre beacon, OH2TEN, which was out of service at the end of last year, is again operational on 28.252 MHz and has been heard strongly during sporadic-E openings.

And now the solar factual data:

The period from the 13th to the 19th of February saw solar activity at very low levels; sunspot indices increased and the geomagnetic field declined from active levels to quiet levels. The sunspot indices increased every day from 26 on the 13th to 69 by the 19th, with the mean for the period at 48. Solar flux levels also showed an increase from 82 units on the 14th to 95 units on the 19th. The average for the period was 87 units. On the 14th the only solar flare of the period to be reported was an insignificant B1.6/SF. The electron fluence remained at moderate levels throughout. The x-ray flux varied little day to day and remained about A6 units but increased sharply up to B1.2 units on the 19th. The average for the period was A6.9 units. The 90-day solar flux average on the 19th was 3 units.

Geomagnetic activity started the period at active levels and was up to Ap 29 units on the 13th, activity returned to quiet levels by the 15th and was down to only Ap 4 units on the 19th. The average for the period was Ap 13 units. The state had been 'mag quiet' from the 15th. The aa indices as supplied by the British Geological Survey for the period from the 7th to the 13th of February were at mostly 'sub storm' levels, except for the 9th and the 10th, when levels were quiet and were down to only 5 nanoTeslas on the 10th. The most disturbed day was the 13th at 54.8 nanoTeslas, the average for the period was 30.2 nanoTeslas, about K3.

I'll repeat the figures: Spots - 48, Flux - 87, Ap index - 13, x-ray flux - A6.9.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers as reported by Meudon for the period from the 10th to the 16th of February averaged 7.0MHz. Due to a pre-auroral enhancement on the 13th at 13.00 hours 8.8MHz was recorded, but by 14.00 hours levels had declined to 6.4MHz as geomagnetic levels increased, 102 nanoTeslas, about K5, was recorded at Hartland at 15.00 hours. The darkness hour lows declined from 3.0MHz on the 10th to 1.8MHz by the 13th. Spread F was also reported several nights and lasted for 11 hours on the 14th; the average was 2.4MHz. The daytime highs took place between 10.00 and 16.00 hours, with the darkness hour lows around 06.00 hours.

And lastly the solar forecast.

This week the more active side of the sun is expected to be looking our way, solar activity may increase to low levels with flare activity expected. Geomagnetic levels are expected to be mostly active to sub storm for most of the week due to a recurring coronal hole, and hopefully returning to quiet levels for next weekend. Ionospheric MUFs in the south are expected to be about 18MHz and 15MHz in the north, but

should increase later in the week. The darkness hour lows are expected to be about 7MHz and spread F is expected some early mornings.

And that's the end of the solar information.

And now a note for your diary:

The World Association of Christian Radio Amateurs and Listeners will be holding its 1995 conference at the Highbury Hotel at Weston-Super-Mare over the weekend of Friday the 29th of September to Sunday the 1st of October. A full programme of events has been organised including the WACRAL AGM and operation of the club station, G3NJB. Details of packages including full-board accommodation may be obtained from Dr Geoff Petersen, G4EZU, whose address is correct in the latest Call Book.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Tango and G7 Victor Oscar series, and Novice calls in the 2 0 Alfa Juliet and 2 1 Delta Uniform series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Robert D. Calkins (wa7nuu@halcyon.com) wrote:

: Unfortunately, some hams think that gives them carte blanche to modify
: their radios for out-of-band operation. That's both illegal and bad
: practice.

Illegal? How? According to what section of part 97? Actually
operating out-of-band, except in an emergency, is illegal, but I haven't
seen any part of the rules that governs modifying amateur equipment in
this way.

Generally, under American law, anything that isn't specifically
prohibited is legal. Where is this practice prohibited?

I am taking skeds for the March 10, 1995 meteor shower. Can run on 6 or 2 during this one. I am in Ms. in em51jq. Please e-mail me, please include a landline # with the best time to contact you. If you need a grid, contact me, I have a good list of stations that you might wish to run with in other grids. Questions about ms welcome. 73, WB5KYK, Larry

PP>>the written, and if you passed, you would get a Tech license. I

That's correct. Prior to 1981 (that date may be slightly off) the
Technician written exam was exactly the same as the General written
exam. In effect, the Tech was a 5-WPM General. If you later passed
your 13-WPM you were upgraded to General.

My choice would be Hyperlog or EQF with a slight edge to Hyperlog.
It runs even on an old "XT" class machine, and has a monochrome
display option. Does all the usual, plus interfaces to all popular
radios (Yaesu, Ten-Tec, Icom, Yaesu). Also on line DXCluster
filtering, call lookup to SAM, BuckMaster, QRZ. Imports from
DB, CT, NA, DXLog, etc., etc., etc. Available on most BBS, CI$, etc,
as shareware, with 800-number registration if you like it. Author
has L/L BBS to download upgrades, etc.

2567. IPS Daily Report - 28 February 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-28 23:39:56 UTC
From: rwc@ips.oz.au
Message-ID: <3j0c8c$scc@flare.syd.ips.oz.au>

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 FEBRUARY AND FORECAST FOR 01 MARCH - 03 MARCH

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 91/36

GOES satellite data for 27 Feb
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 2.4E+04
Daily Electron Fluence >2 MeV: 6.1E+06 (normal)
X-ray background: A9.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Mar 02 Mar 03 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Mar: 90/34
COMMENT: Region 7846 (S16 E33) has mixed magnetic polarities in the
small trailer portion of the group.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled with active levels 09-12 UT
and minor storm levels 18-21 UT.

Estimated Indices : A K Observed A Index 27 Feb
Learmonth 20 3334 3353
Fredericksburg 20 20
Planetary 20 21

Observed Kp for 27 Feb: 2335 4343
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Mar 18 Mostly unsettled with isolated active periods
possible
02 Mar 12 Quiet to unsettled
03 Mar 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 5 was issued on 27 February and is

current for interval 28 February to 2 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Feb normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Mar fair-normal fair poor-fair
02 Mar fair-normal fair-normal fair
03 Mar normal fair-normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
28 Feb 38 Near predicted monthly values with 30-40%
enhancements 10-13 UT. Sporadic E observed
05-09 UT and 16-19 UT, and obscured the F
region 16-18 UT.

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Mar 5 Near predicted monthly values to 20% depressed.
sporadic E and spread F may affect circuits at
times.
02 Mar 25 Near predicted monthly values
03 Mar 30 Near predicted monthly values to 20% enhanced.
COMMENT: IPS HF Communications Warning 8 was issued on 27 February
and is current for interval 28 February to 2 March. MUFs at
Townsville were 20-30% enhanced 00-06 UT and 10-14 UT and near
predicted monthly values at other times. Hobart MUFs were 15-30%
depressed 00-07 UT and 13-16 UT and near predicted monthly values at
other times. Spread F was observed 12-15 UT and sporadic E obscured
the F region 18-20 UT.

Has the Town of Hempstead on Long Island seen the Light?
As many of you are aware, Mark Nadel, NK2T has been fighting a long drawn out battle for the past two years with The Town of Hempstead on Long Island NY. After spending almost $25,000 in legal expenses and going through two zoning board hearings and the State Supreme Court of NY, there may be some good coming from this experience.

As of this moment, there has not been a decision on the January 28, 1995 re-hearing, however some new developments are on the horizon.

On Tuesday, February 28, 1995, The Town Board has shown some interest in possibly changing their 30 ft height limitation for amateur radio antenna towers. The Town's legal department has requested model antenna ordinances from Chris Imlay, General Council for the American Radio Relay League (ARRL). Nadel's attorney, Peter Mineo has also agreed to meet with the Town to help put together an acceptable ordinance, HOWEVER, in order for us to do this, additional money is required to help finance this case. As we said earlier, $25,000 has been spent and with an
outstanding bill of $6,000 Things are not looking too good financially.

We need you to helkp dig into your pockets, whether it's one dollar or 100 dollars. Every Dollar is important. With almost 650,000 ham out their a dollar from half of them would contribute to the winning of this case.

If you remember the original objection to Nadel's radio tower was due to an radio frequency interference complaint. Don't let local towns take on the jurisdiction of the FCC.

Again PLEASE be generous,

Send your contributions to:

R.A.D.I.O.
c/o PO Box 343
Williston Park, NY 11596

For updated information on this precident setting case call the R.A.D.I.O. information line at 516-735-2500 24 hrs/day

Thank you.

Bob Calkins is an so ignorant of FCC regulations, it makes me wonder how he got the title "communications Officer".

I think everyone has heard about the California ham who was cited for using his modified ham radio to report an emergency. SO WHAT! He was obviously cited by state or local authorities. He wasn't cited by the Feds. State and local laws may very well prohibit possession of a radio which can transmit on police frequencies. I'm not aware of any such laws, but I know that the state of Illinois doesn't have one, nore does the county I live in. I'm not sure if the city I live in has such a law, but it could, and then I would be capable of being cited for possession.

I haven't seen the particulars on the California ham, but I bet he was cited for possession. Local authorities may have charged him with 'illegal' use, but they don't have the jurisdiction. Mr. Calkins will disagree, but the state of California could not legally take action against anyone for illegally transmitting on police frequencies. For that matter, NOBODY but a designated FCC official (federal marshal?) has the authority to confiscate ANY radio equipment, unless said equipment violates possession laws in the area in which you live. The best part is, if the radio equipment is an AMATEUR SERVICE TRANSCEIVER, local authorities can't confiscate it regardless of their little laws.
(as per [47 U.S.C. 310 paragraph (d)])
This doesn't mean they are aware of FCC regulations. They may confiscate it anyway, but who ever said police never make mistakes.

The FCC will tell you "Enforcement of FCC regulations is the sole province of the FCC". I'm sure many people have been cited, and probably jailed by the state they live in for improper use of radio equipment. This doesn't mean it would have held up in federal court. When in this situation, most people would have first soiled their pants, and then accepted the judges decision without question. Most public defenders and attorneys have zero knowledge of FCC regulations. (notice I said 'most')

As far as the legality of the modification,
[47 U.S.C. 302 paragraph (b)] states
"No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section."

(I think by definition, Manufacture applies to how many are created for sale per year.)

Notice it doesn't say anything about modification, or possession.

47 C.F.R. $15.21 reads
"The users manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could viod the user's authority to operate the equipment"

This was written because most intentional radiators are type accepted. A microwave, for instance, is type accepted. If I try to do a 'Tim the Toolman Taylor' and make it more powerful, I will instantly void the type acceptance, and therefor make it illegal for me to cook dinner.

Amateur equipment is not type accepted, so modify to your hearts content.

As I stated before, I wrote a letter to the Wireless Telecommunications Bureau of the FCC. (Washington DC) Here is an exact quote of their response. Two people out there by now have received a photocopy and can verify its contents.

"This is in response to your recent letter requesting information about amateur radio service equipment. You ask if the Commission's Rules permit an amateur service licensee to possess an amateur service two meter transceiver that has been modified to receive and transmit on channels in the frequency segment 140.0-160.0 MHz. As a specific example, you refer to your Yaesu model FT23R transceiver which has been modified as described above.

The receiver in the Yaesu FT23R has been type accepted by the Commission. The transmitter, however, does not come under the Commission's type certification program. Therefore, modifying the transmitter does not violate the Commission's Rules. Transmitting on a frequency, however, requires the station operator to have an authorization for the radio service assigned that frequency. Generally, transmitting equipment also must be type accepted by the commission for that radio service. Use of a transceiver that has not been type accepted for the Police Radio Service to transmit on a Police Radio Service frequency, for example, would violate Section 90.203 of the Commission's Rules, 47 C.F.R. $ 90.203, and may constitute unlicensed operation of a Police Radio Service station. "

Signed by Robert H. McNamara
Acting Chief, Private Radio Division
Wireless Telecommunications Bureau

I don't know what else needs to be said on this issue.
Modification of amateur equipment is LEGAL. Plain pure and simple.

Possession of modified amateur equipment is legal as far as the FCC is concerned, but local/state opinions may differ.

Bob wrote of the Amateur Supply Store which was fined for offering information on how to modify equipment. Again, SO WHAT! There may be laws concerning a business offering such information. I doubt it, rather, I bet the business was either offering modified radios for sale, or allowing non-amateurs do modifications, or something like that. I suppose it could be that OFFERING information like that could be construed as a violation of [47 U.S.C 302].
What was the exact charge?

Dave Schweinitz made a VERY good point about possession = intent. The individual officer has to do the best he can at the time. I don't feel bad that I personally had radio equipment confiscated. I do, however, feel much anger for the police department involved now that it has been PROVEN that my possession of that radio is legal, and it has been PROVEN that no illegal activity took place involving my radio. The police department involved still refuses to voluntarily return the radio, which makes me think Bob Calkins used to work for them. They aren't concerned with the law as much as they are with saving face.

The only problem I see with Mr. Schweinitz comments is that although intent may be the issue, it is not for the little people to decide. Again, as I stated before, Radio equipment falls under FEDERAL JURISDICTION.

Dave is also correct about it being legal to possess ANY radio. According to the best 'off the top of the head' response I could get over the phone with the FCC, the ONLY radio which is illegal for a person to possess is one which can scan cellular telephone frequencies, which was manufactured after January 1, 1995.

The biggest problem with this whole thing is that people want to look for something in the regulations which permit it.
WRONG ANSWER. You have to look for something which prohibits it. Once you realize there are no regulations prohibiting it, we can infer it must be legal.

People like Bob really bug the crap out of me. Just because you are a cop, you don't get to play GOD. Something isn't illegal just because you are a cop and you say so. I had tons of people tell me my radio was illegal, and it should be destroyed. These people may be hams, but they must not be practicing. The scary thing is Bob does have some authority because of his badge, and look at how he is using it. I'll bet he owns a ham radio and uses it on Police Service frequencies, which is illegal, even for a cop.

The question "is it legal to TX on police band in an emergency?" is a bit more vague. Technically speaking, the wording in the CFR indicates it not legal, even in an emergency.

[47 C.F.R. $97.403] reads "No provisions of these rules prevents the use by an amateur station of any means of radiocommunications at its disposal to provide essential communication needs in connection with immediate safety of human life and immediate protection of property when normal communication systems are not available."

Okay, but [47 C.F.R. $97.3] defines an amateur station as "A station in an amateur radio service consisting of the apparatus necessary for carrying on radiocommunications."

Therefor, you can use any means of radiocommunications, as long as it is in the amateur radio service.

But, who out there thinks anyone would ever get into trouble for saving a life by transmitting on police channels. The intent of the FCC wasn't to prohibit amateurs from using police frequencies in an emergency. Actually, I doubt too many people realize exactly how this is worded. Regardless of the technicalitys, the FCC is't going to get too worked up about use of police channels in an emergency.

Don't get me wrong, I sympathize with departments which get interference from citizens with radios like ours. But for the most part, I truely believe the ham community is doing more good for the world than harm. Who is always there in an emergency? Who is always striving to improve foreign communications/relations. Not COPS.

Cops should be more concerned with the fact that ANYONE can legally buy ham radios. Anyone can get an amateur to modify a radio for them. Therefore, anyone can legally possess (in most cases) an amateur radio which can TX on police frequencies.

I doubt anyone can find errors in any of this, but if I goof, please let me know. I strive to support any claim I make with proof, and if I make a mistake, I would like my correction be made with proof as well.

Thanks all,
Dave

CONNECTICUT VOLUNTEERS NEEDED FOR SPECIAL OLYMPICS
NAMES NEEDED BY 15 MAR 95

From June 28 through July 9 this year, the Special Olympics are coming to Connecticut. Amateur radio operators have undertaken to sponsor, install and man a group of booths to accept messages from the atheletes and public, to their familes and friends at home. These messages will be handled via amateur radio as third-party traffic. All work will be done on a voluntary basis.

There will be much work to do weeks and months beforehand, in coordination and setup; staff required to man the booths at the various venues; and disassembly and return of materials afterwards. All of this will be performed by volunteers.

If you are available to volunteer for duties before, during or following the Special Olympics, please contact either Michelle, N1PNT or me giving your name, address, callsign, day and evening phone numbers, and any special skills you might have to help in this endeavor.

You may packet, Internet, Fidonet or telephone.
AX.25 - KD1YV@K1UOL.CT.USA.NOAM or N1PNT@K1UOL.CT.USA.NOAM
Internet (America On-Line) - KD1YVJim @ aol.com or N1PNT@aol.com
Fidonet (receive only) - jim.ritterbusch@f1015.n141.z1.fidonet.org
Phone evenings (203) 790 7041 -
leave amessage with one of the Hamily

Thanks for your support and 73
Jim Ritterbusch

> to summon aid. However, it also said that POLICE CHANNELS are taboo.

Well that's just dandy! Clearly, if you get into trouble with this advice,
Gordon will come by and bail you out :-)

There seems to be a confusion between what Part 97 permits and what it
does not forbid. It would be a serious mistake to act with the assumption
that what Part 97 does not forbid is thereby permitted without limit.

Apart from FCC communications emergencies, RACES and the President's War
Powers, this is how the FCC guides us:

97.403 Safety of life and protection of property. - No provision
of these rules prevents the use by an amateur station of any means of
radiocommunication at its disposal to provide essential communication
needs in connection with the immediate safety of human life and immediate
protection of property when normal communication systems are not
available.

Remember that part 97 does not prevent anyone from saving lives or property.
That is not the same thing as saying that part 97 PERMITS anyone from
exceeding the permission of their license grant. If you get into trouble,
you will receive a complaint under some other federal or local code and it
will not be as a breach of Part 97.

No one ever said life was meant to be too easy!

Good luck with your General test.

73.

2580. 1750 METER BAND

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-01 14:12:04 UTC
From: S965544@UMSLVMA.UMSL.EDU
Message-ID: <173547354.S965544@UMSLVMA.UMSL.EDU>
Source record: 251556

I'm thinking of building an FM tranciever for the 160-190 KH experimental band. I'm looking for anyone who has any experience with voice modulation (AM or FM) on these frequencies. I an aware of all of the problems and limitations that are associated with this type of project, but would like to hear from anyone who has actually tried it. Please respond directly to:

Bill Johnson <s965544@umslvma.umsl.edu>

2581. Amateur Radio: Elmers List Info and Administrivia

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.11 02/25/95 08:18:42
Changes: Minor changes
Posting-Frequency: posted on the 1st of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to Greater Omaha Public Access Unix, which was motivated by a desire to seek a stable site for the Elmers List for some time to come. See my signature below for the new addresses. My old E-mail addresses, at the University of Nebraska at Omaha, will probably work for the foreseeable future, but are not guaranteed.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at the Ohio State World-Wide Web Server (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have

adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month

on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one.

Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html

The advantage of reading the Elmers list at this site via WWW client
software is that all URL's are converted to hypertext links.

see also:

news:comp.infosystems.announce
news:comp.infosystems.www.misc
news:comp.infosystems.www.providers
news:comp.infosystems.www.users

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

Amateur Radio Elmers Resource Directory (as of 03/01/95)
++++++++++++++++++++++++++++++++++++++++++++++++++++++
- A -
++++++++++++++++++++++++++++++++++++++++++++++++++++++

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Howie Goldstein and Bob Nielsen for more information about TAPR)

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:
```

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document

"""

VHF packet (AX.25 and TCP/IP)
HF SSB and RTTY
FM/repeaters
Clubs/activities
Public relations
Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other
things) writing and editing general-interest feature articles for QST,
and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns
conducted by other contributors, including Packet Perspective by Stan
Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and
Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV;
Happenings by Jim Cain, K1TN; Contest Corral and Special Events by
Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by
Gail Iannone; most of the contest rules announcements and results

articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New Products listings scattered throughout the magazine, and often contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

My latest volunteer public service project is that I'm the official Amateur Radio Liaison the the 1995 Special Olympics World Games, to be held in Connecticut. I report to Dr Chuck Bruder, N3AGA, the Special Olympics' Deputy Commissioner of Telecommunications. (This is supposed to be literally the biggest event in the US in 1995, and possibly the world! They expect 10,000-15,000 athletes, 45,000 international delegates from almost all nations, more than 500,000 spectators, about 20 hours of prime-time network TV coverage, and probably a visit from President Clinton and the First Lady...whew!)

++

Rob Bellville N1NTE

rbellville@aol.com

PO Box 515
Millbury, MA 01527-0515

Experience:
* Computer Networking Hardware Technical Engineer (Yuck!)
* Computer Education and Technology Consultant (PC/Mac HW & SW)
* K-12 Computer Educator/Instructor/Technician in a public school
+ Two-way Radio Consultant

+ NetRead(tm) author (Articles via Internet)

---
* present occupation(s)
+ on demand/when necessary

Interests:
VHF/UHF simplex
Duplex and simplex repeaters
Remote Bases
6M - AM/SSB/FM
2M - AM/SSB/FM/Packet
440 Mhz FM
Would try 1.2GHz if there was any local activity!
VHF/UHF QRP
Fixing radios old and new
Setting up a packet radio file server (ROSErver)
Internet - Usenet newsgroups, FTP, etc...
Scanners, SWL, and making CB radio useful again
PC and Mac computers - hardware and software
Communications for neighborhood crime watches
Caching radio equipment for that *special* occasion

Please feel free to contact me either by email or
US Mail. Will be happy to share the knowledge!

Rich Bono NM1D Internet: rbono@nectech.com
+1 508 635-6300 nm1d@aol.com

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

ftp://oak.oakland.edu/SimTel/msdos/hamradio/
ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or
5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Tom Bruhns K7ITM

tomb@lsid.hp.com

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

William (Bill) Coyle N3OGH

wcoyle@delphi.com

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Scott Ehrlich Amateur Radio Callsign: wy1z E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list,
I have incorporated both of these listings into the Boston Amateur Radio
Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put
together a World-Wide Web page for the American Radio Relay League
(ARRL).

Since the ARRL does not yet have web capabilities of their own, this page
is being offered on the same site as the Boston Amateur Radio Club's web
page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff,
official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a
copy of the page via E-mail; send a message to listserv@info.cern.ch
with the word "help" in the body for more information). Ask me for
more details about this.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have

published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If anyone is having a problem with CATVI, send a 9X12" SASE with 4 units of postage to the ARRL Technical Department Secretary. Ask for the "EMI/RFI Package" and "EMI/RFI - CATV." The CATV package includes a reprint of the article I wrote for Communications Technology -- the journal of the Society of Cable Television Engineers. Your local cable company will recognize this publication and will give credence to the words therein.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

ARRL info server files may also be accessed via anonymous FTP at:

ftp://oak.oakland.edu/pub/hamradio/arrl/

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would

commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

Maintainer of rec.radio.amateur.misc and rec.radio.cb FAQ lists

Available from:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be someone
who has enthusiasm for hobbyist radio, experience with UseNet, and the
ability to work with the other editors. No single person can know all
the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ's are currently posted with the AUTO-FAQ software, which is
written in Perl. So it would be a plus for volunteers to post the FAQ
to have Perl installed on their system and be able to use "cron" or "at"
so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting maintainers, as well as anyone with a sincere interest in helping keep the rec.radio.amateur.* newsgroups the friendly and useful forums they are today, is also available. To subscribe, send E-mail to rra-wg-request@amdahl.com.

PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to most Internet services such as Email, FTP, TELNET,
Gopher, WWW, Callsign Lookup, Etc... Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410 661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

+1 410 661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - wb3ffv1.sed.csc.com

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2
and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!! (5 phone lines)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's

AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic directory.

If you want to access the BBS via Telnet, all you have to do is TELNET to wb3ffv1.sed.csc.com, and login is 'bbs' with no password required. To use anonymous FTP, just ftp to wb3ffv1.sed.csc.com and login as 'anonymous'. This system is currently attached to the Internet via a dialup SLIP link, and should generally be available 24hrs, but at times the modem will drop the line. Also, since this isn't the fastest link, I will be limiting the maximum number of anonymous sessions for the moment.

ampr.org IP Coordinator for Maryland Subnet (44.060.xxx.xxx)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

If you have any questions or problems, feel free to contact me at one of the numbers/addresses above. Good Luck...

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa

AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

I'm certainly willing to be an Elmer if there's a need. I hope I've
learned a few things since 1966 when I first went on the air. :-)
Here's a list of subjects I might be able to help with:

Combining amateur radio and flying
Antennas
Civil Air Patrol
General Operating Practices
Older (Tube) Equipment
Test Equipment and Measurements

++

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

- vacuum tube amps, receivers, exciters
- CW operating tips
- wire antenna tips, hints & kinks

++

David Stockton, GM4ZNX

dstock@hpsqf.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked

summing loop circuit to replace the common mixer-filter LO frequency adder. A technical article describing the project was recently published in RADCOM.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/HamRadio/scripts/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

I think Dave's right on - with the following "intent" added. To me the argument has been one sided in support of using 47 C.F.R. $97.403 to justify out-of-band emergency communication in other services. BUT my reading is we are mandated to use HAM freq's for emergency communication when the other communication systems fail. So, if the CAP repeater fails and communications are needed in an emergency - could a "Bluechip 432" call be acceptable on Amateur Freq's? How about "Coast Guard Rescue 1454" on your favorite HF Freq? Maybe "Oak Ridge Pumper 11" on a HAM UHF Machine?

Clearly government agencies can aquire commercially sold HAM equipment and "go for it" on HAM freq's - and does 47 CFR 97.403 allow it? What's good for the goose is good for the gander . . . eye for an eye . . . do unto others as you would have them do unto you. . .

Granted, the above two paragraphs are pushing it a bit. However, I've spent a long cold night as a rider with the Knoxville Police for communications because Knox County lost total communication when their 800 system emergency back-up power system when down during a prolonged winter storm. I did it because 97.403 told me to. It's part of HAM Radio.

Now read 47 CFR 97.403 again . . .

"No provisions of these rules prevents the use by an amateur station of any means of radiocommunications at its disposal to provide essential communication needs in connection with immediate safety of human life and immediate protection of property when normal communication systems are not available."

To me, this means we (Amateur Operators) support them. Personnally, I don't consider the Police, Air, Maritime, or other "Non-Amateur" Bands to be at my disposal no more with than without an Amateur License. I consider the Amateur Bands to be at my disposal (da, that's what I'm licensed for). So, I can use any mode on any HAM freq. to relay communication needs in connection with immediate safety of human life and immediate protection of property. i.e., if necessary a Novice can "come up on" (kinda military for TX on) 14.200 Mhz USB in an emergency. Boy!

would they receive grief (although permitted), or what!

Intent . . . ually,
Walt/KF0OS

Morning Dave,
Wow - you're going to get CTS from typing such a long article!

Now, don't pick on Bob. An FCC official was present when that
San Diego ham was asked by the sheriff to `donate' the HT or
face charges. Now that you know this you need to say you're
sorry to Bob.

>I haven't seen the particulars on the California ham,

Yes, that's obvious.

>People like Bob really bug the crap out of me. Just because you
>are a cop, you don't get to play GOD.

Too much coffee this morning, Dave?

Why are you trying so hard to justify owning a police-capable
radio? Part 97 instructs us to first make sure no other communications
means are available prior to putting out an emergency call outside
the ham bands. That means if you've got a cell phone or if there's
a pay phone across the street you had better use them instead of
your HT; otherwise don't complain if your HT gets taken away from
you.

People like Bob are the ones risking their lives daily for us.
Whatever you do doesn't come anywhere near the importance of
Bob's work.

Not true. I enjoy target shooting and hunting, and have guns in the house
for those purposes. If the need ever arose I wouldn't hesitate to defend
myself or my family when some criminal decides to threaten our lives. I
happen to believe that it is ultimately the responsibility of the individual
to defend themselves against harm - the police sure aren't going to do it.
I also believe that if a criminal decides his right to rob me is more
important than my right to live peaceably in my own home then he loses,
every time.

If you knew me, you'd know that I'm as far from a wimp as it gets.

|>> I only have one question... WHY????? Why would anyone want to pay 30 odd
|>> quid a year to have their mail ignored???
|>>
|>> Beats me

Actually, if it wasn't for the RSGB we would all have to have our radios type approved now. An edict almost got passed in parliament saying that all transmitting equipment needed to be type approved. This would mean that your UK home brew radios and virtually all black box radios would be illegal as they are exempt from type approval.

Only by lobbying of several MPs by members by fax and phone (including the then president) of the RSGB was this stopped.

I was told this by that very same past president.

The RSGB also sends reprisentatives to the ITU conferences. To go as an idividual would cost too much and in any case the ITU isn't going to listen to a handful of people, they do listen to the RSGB.

Come on down and we'll teach you how to save 33% on the pronunciation
of W. Most everybody down South says it in two syllables, something like
"dub-ya" or "dub-ye," at least in casual speech. I know one guy who
manages to elide all but the first syllable of W in his WB prefix,
which comes out "dub-bee".

From: davros@news.eden.com
Message-ID: <3j2lpj$3no@matrix.eden.com>
Source record: 251571

Not to stir up a hornet's nest or anything, but this particular issue is one that really really (really?) gets under my skin....

There are few disabilities that I can think of that would make it impossible to copy above 5wpm. Very few. Blindness is not one. Nor is deafness. (By the by, copying code visually *is* perfectly legal; Part 97 says so. So is copying with a vibrating device. No excuse there...Can't hear the code? Copy by flashing light or vibrating transducer, then.) Can't write? Head copy, followed by, if you like, orally reading back what you've copied every few words or so--hell, it's even easier than that!...Can you head-copy enough to answer some easy questions about what you've copied in your head? Good! Then you're set. And you can even use the experience on the air! Mobility impairment? Stuck with an iron lung or something? Y'ot'to see some of the stories about folks who have done code before this waiver thingy.

Mind you, if there is a really *legitimate* reason why someone can't copy above 5WPM, and I suppose there may be one, somewhere, OK sure fine, get a waiver. But for Chrissake, try it first... I do think that there are far too many of us who want the easiest way out of something, and because they can get it, they do. But in the end, where does it get you?

I'm amazed at some of the things that the FCC will let pass as a qualifying disability...

hello folks, i'm assisting our local ambulance squad connecting their communications equipment and they have one request that i'm not sure what equipment they'd need to do this can anybody help me? following is their quote, thanks in advance -- kc

"We want to take information comming out of a serial port on the UNIX box (as if being sent to a printer) and drop it to the packet modem. This will be hooked up to our 250 watt base transmitter (Motorola) and then be broadcasted. On the receiving end we hope to use a scanner with the modem attached to the earphone output. This would then go to a printer at each station. So basicially what we are doing is replacing the printer with a modem to modem link over a 500 MHz radio frequency."

can this be done?

That sounds familiar. I ordered their 9140B QRP transceiver system back on
December 1st. Whenever I called, the lady answering the phone would say
"2 more weeks" in a very automatic manner. By mid-February, I was ready
to cancel the order. I gave it one more try, asked for the manager of
customer support, and he was shocked to find out how long my order had
gone unfilled. Incidentally, it'd been in their "Rush" file for about
a month.

I would give a read of page 9 of the September 1993 "It Seems To Us..."
column in QST. The key word: pecuniary. If you make $$$ off your
tranmission, it's bad. As long as you aren't making money off your
ordering a pizza on the air, you're legal. Just make sure the rest of
your club members get a slice!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 MARCH AND FORECAST FOR 02 MARCH - 04 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 90/34

GOES satellite data for 28 Feb
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 2.3E+04
Daily Electron Fluence >2 MeV: 3.3E+07 (normal)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Mar 03 Mar 04 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Mar: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 28 Feb
Learmonth 26 3345 3543
Fredericksburg 23 22
Planetary 20 28

Observed Kp for 28 Feb: 4355 3344
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Mar 20 Active
03 Mar 20 Active
04 Mar 15 Unsettled to active
COMMENT: IPS Geomagnetic Warning 5 was issued on 27 February and is
current for interval 28 February to 2 March. Active conditions
expected for next three days.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Mar normal normal poor-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Mar normal fair poor
03 Mar normal fair poor
04 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
01 Mar 46 10 to 30% above predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
02 Mar -5 10 to 20% below predicted monthly values
03 Mar -5 10 to 20% below predicted monthly values
04 Mar 5 Near predicted monthly values
COMMENT: IPS HF Communications Warning 8 was issued on 27 February
and is current for interval 28 February to 2 March. HF communicators
in northern Australia region should continue to use the monthly T
index of 15. Depression appears, at this stage, to be affecting
southern Australian region. Townsville MUFs were enhanced 10-30%
yesterday. Hobart MUFs were near predicted monthly values
with spread F observed during local night.

>impediments.

This is like saying sport flying has made few concessions for those
who are blind.

The nature of the radio hobby requires speaking and listening abilities,
just as flying an airplane requires excellent eyesight. Regardless, the
VEs must follow all laws regarding equal access for examinees. You need
to provide specific evidence of your hurtful allegations.

>It is in the exploration of this argument that you unearth
>another prevailing attitude in amateur radio. Among most hams that I
>have encountered there is an underlying antagonism against anyone who is
>other than the white anglo saxon protestant.

How can you determine a person's race or religion on the air? Gee,
a QSO (at least on HF) starts with a CQ. The respondent answers, not
knowing the race nor religion of the calling party. The calling party
doesn't know the race nor religion of the respondent. A conversation,
sometimes lasting hours, results. A new friend is made. This happens
hundreds if not thousands of times daily. Your contention is false.

>Again we see how online services offer a similar level of accessibility
>to different people. The difference here is that you don't have to take
>a multiple guess test to gain access to this information exchange
>outlet. In amateur radio you have the typical white suburban slob who
>does nothing more than memorize every question in the question pool.
>Our diligent scholar then drives to some remote community college or ham
>fest question pool. Our diligent scholar then drives to some remote
>community college or ham fest and parrots out the answers. Our newly
>licensed ham is on his new rig within a matter of weeks having learned
>nothing other than...gee... our new amateur gives us a blank and empty
>stare.

A *very* good argument for comprehensive exams requiring more theory.
But then you'd accuse us of discrimination against those who can't
master the theory.

I deleted the portion of your article where you quoted some white male hams lamenting the `n_____s' entering the hobby. Is that any worse than you calling us `white suburban slob(s)'? You're part of the problem that you're complaining about.

I believe that some of this has been invesitgated at VLF and ELF frequencies. Even as low as a few cycles per second. Or even less! The LWCA (Long Wave Club of America) might be able to help you out on this. I don't have their address handy but I am sure it will surface. The bandwidths would be fairly narrow, in the area of just a few Hz or so. GL.

I have just obtained by novice and technician license and am looking for
some equipment to get started. I was wondering if your unit is suitable for
a beginer and if so that i sthe price you expect.

Thanks

There's always Central Electronics & Salvage in Utica, NY.
Directly across the street from the World-famous (Infamous ?!?)
Utica Club Brewery. They cater to mostly old GE stuff, and the occasional
lot from IBM and other nondescript places. I don't know the address, since
it is an easy place to find (for me, at least- I take Rt. 90 to Utica,
make a couple of turns and BAM I'm there) and there SHOULD be a few people
that know of its existence. Wish I was more help- but that is all for
surplus I know of in the ENY/WNY area... ..

Oh YES- there's the Ramsey Electronics Surplus Joint in Rochester. Also
easy to find- caters to pieces-parts from the kits they produce. E-Mail me
interest and I'll send better directions. Only open Saturday from 10am to
2pm.

Regards & Happy Hunting,

Mark

Well, since Radio Shack is heavily advertising that they are now in the electronics service business, give them a try. Tell them that the device is illegally radiating in an amateur radio band and that their ads say that they can fix it for you. Or they can give you back your full purchase price (you DID buy it new, I hope!) and you WON'T file a complaint with the FCC.

Windows' Terminal program works fine for my PK232 and a PacComm Tiny-2.
They even run simultaneously on different com ports. You must have
something in the Kam+ interface configured improperly to have the cluster
disconnect you every time (The comm port does not know that the Terminal
window is not active).

Hello all...

Below is the ID scripts for This Week in Amateur Radio. This is what you hear before we break for legal ID every 9 minutes or so.

If you would like to record a few of these (or make up your own!) do so on cassette audio tape or digitize it into a 16 bit wav file and drop it in the mail to:

This Week in Amateur Radio
ID Break Audio
P.O. Box 8592
Academy Station
Albany, New York 12208

GENERIC ID BREAKS

You're listening to "This Week in Amateur Radio". We pause 15 seconds to allow stations to identify themselves. This is the "Omega Radio Network".

With the "Amateur Radio Newsline", the "RAIN Dial-up", news from the ARRL and RAC, and other amateur radio features via satellite, you're listening to "This Week in Amateur Radio" on the "Omega Radio Network".

Heard coast-to-coast, from the Maritimes to Acapulco, from the Pacific Northwest to the Carribean, and serving Alaska and Hawaii, you're tuned in to "This Week in Amateur Radio" on the "Omega Radio Network".

Your source for the latest amateur radio news and features, you're listening to "This Week in Amateur Radio" on the "Omega Radio Network".

Keeping you up to date with the latest amateur radio news and information, you're listening to "This Week in Amateur Radio" on the "Omega Radio Network".

Serving amateurs in all 50 states, Canada, and Mexico from Telstar 302, transponder 21, in geosynchronous orbit, you're listening to North America's satellite-delivered amateur radio news and information service, "This Week in Amateur Radio" on the "Omega Radio Network".

You're listening to North America's satellite-delivered amateur radio news and information service, "This Week in Amateur Radio" on the "Omega Radio Network".

Live, from AT&T Telstar 302, Transponder 21, in geosynchronous orbit, you're listening to North America's only "up-to-the-minute" satellite

delivered amateur radio bulletln service, "This Week in Amateur Radio" on the "Omega Radio Network".

From 22,500 miles in geosynchronous orbit, aboard AT&T Telstar 302, Transponder 21, standard analog sub-carrier at 5.8 MHz, you're listening to Morth America's only satellite delivered amateur radio bulletin service, "This Week in Amateur Radio" on the "Omega Radio Network".

RAIN DIAL-UP ID BREAKS

Coming up next is the "RAIN Dial-up". We pause now for station identification. This is the "Omega Radio Network".

Coming up next is the "RAIN Dial-up". We pause now for station identification. You're listening to "This Week in Amateur Radio" on the "Omega Radio Network".

You're in the middle of the "RAIN Dial-up", heard coast to coast here on "This Week in Amateur Radio" on the "Omega Radio Network".

NEWSLINE ID BREAKS

Coming up next is the "Amateur Radio Newsline". We pause now for station identification. This is the "Omega Radio Network".

Don't make the mistake in believing that because you can't see the disability, it's not real. ADD could make it impossible to learn to copy code enough to pass the test. So could other learning disabilities.

So what have you seen claimed as a qualifying disability, that you don't think are valid?

Okay, last time I tried to post an answer to this, our spool was full and would not take anymore. Here-goes-it again:
I recently purchased an FT-530 and I love it! You don't have to be a rocket scientist to learn the programming. Mind you, I have graduated from an ICOM W21AT - which, for a new ham, was intimidating, I thought. The keypad was also way too tiny. I recently borrowed the FT-530 to a friend who, upon learning his was on the fritz and needing warranty work, would have been HT-less for a few weeks. I MISS IT! (I still have my ICOM - so it's not too bad, but I really do miss it.)
HIGHLY RECOMMEND the investment!

Does any have a six-meter beacon list that they care to share with me ? Or, do you know of a ftp site with that info may be found ?

Have been listening for fsk or FM digital (any mode) operations on six (nil heard). Are you aware of any activity at all ? If so, please pass along freqs/modes.

Skeds on amtor/pactor/packet anyone (fsk or fm) ?

Thanks,

Richard/NT2Z

Hello to all from KE6PUY in Pasadena, California. At present, I only have a 2-m HT (need to get my general liscence b4 going on HF.) Would love to hear from people around LA about friendly repeaters, etc. I'd especially love to hear from other females out there -- I've been a little daunted by the number of men I hear (I was one of two women there when I took my tech test... the other women, mind you, was testing for her advanced class...)

Also, I am wondering if anyone out there has ever operated from Death Valley National Monument. I'd love to know about different repeaters, but also about the tropo conditions and how far one can go simplex...

Sorry if this sounds like a new ham posting; it is!

Forgive me, but what does any of this apocolyptic bullshit have to do
with amateur radio?
Yes, the world changes quickly and if you think it's tough now, wait a
couple of years. As we have more and more access to information the world
is going to be increasingly difficult to understand, but looking to the
Bible isn't going to help. Learning how to process all of this information
will. In the meantime, do your recruiting elsewhere. It's bad enough to
have to read for sale postings here, spare me the four horsemen, PLEASE!

Bill, consider carefully the antenna situation. Any efficient antenna will likely have a very high Q. (Practical antenna size tend to have VERY low impedances which must be matched to any transmitter device. They also have rather high reactive impedances in the series lumped element model of the antenna.) If you want efficient radiation the Qs run to 100 or higher. At 200KHz a Q of only 33 gives you an effective bandwidth of the antenna of 3KHz. It is difficult but possible to squeeze AM through that knothole. It is generally pointless to squeeze FM through that small a knothole. Most activity at those frequencies is CW for obvious reasons. Heck, go down a decade and a half in frequency and even medium speed CW has problems with antenna Q for decent antennas.

Almost. Prior to 1987, the Technician written exam was the same as the General written. This was changed at the same time as Novice enhancement.

2638. CQ STATESIDE GB0/2/4JAS SPECIAL EVENT 5-11 MARCH

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-02 11:39:52 UTC
From: Alan Clayton <K_ARC@UK.AC.NERC-KEYWORTH.VAXA>
Message-ID: <3j4aq8$htd@kwuz.nerc-keyworth.ac.uk>
Source record: 251521

JASON Project "Expedition Island Earth"

GB0JAS GB2JAS GB4JAS GB6JAS
SPECIAL EVENT AMATEUR RADIO STATIONS

Background: The JASON Project is an educational expedition run by the JASON Foundation for Education in the USA, and has the aim of involving students and their teachers in science and technology through the use of advanced telecommunication.

This year the JASON Project "Expedition Island Earth" will take scientists and children on expedition to the Hawaiian Islands. They will study the origins and natural history of the islands, and in contrast use NASA technology to look back at 'Island Earth'.

The expedition's work will be relayed live by satellite to 30 centres in the USA, Canada and Bermuda America and to 5 centres in the UK - five times a day.

Three Barclays Life JASON Project centres in the UK have Amateur Radio Special Event Stations as part of their associated exhibitions:

GB0JAS and GB6JAS at the British Geological Survey near Nottingham.
GB2JAS at the Merseyside Maritime Museum in Liverpool.
GB4JAS at RAF Lakenheath, near Bury St Edmunds, Suffolk.

GB0JAS & GB6JAS @ the British Geological Survey, Nottingham

Location: Headquarters of the British Geological Survey, 5miles (8km) south of Nottingham.

QRA IO92 KU WAB square SK64
Lat/Long 52 53N 01 04W County Nottinghamshire

Dates/Times: 5th to 11th March (public days are 6th to 11th March). 1300-2230 hours UTC daily. Some morning operations (0900-1300UTC) on Sunday 5th and Saturday 11th March.

Organisers: Loughborough & District ARC, Melton Mowbray ARS, ARC of Nottingham, South Notts ARC, Rolls Royce ARC, Erewash Valley ARG, GPT Communications ARC, South Derbyshire & Ashby Woulds ARG

Amateur Radio Exhibitions: Two exhibition stations on HF (GB0JAS); one exhibition on vhf/uhf (GB6JAS); live weather images from NOAA and Meteosat; RSGB and STELAR (Science and Technology through Educational Links with Amateur Radio); UK Novice licence scheme.

Main frequencies for GB0JAS (HF & MF) and GB6JAS (VHF & UHF):

3.770MHz, 7.070MHz, 14.270Mhz, 21.270MHz, 28.470MHz, 51.230MHz, 51.550MHz (fm) 144.230MHz, 144.550MHz (fm), 433.550MHz (fm).

GB2JAS @ Merseyside Maritime Museum, Liverpool

Location: Merseyside Maritime Museum, Albert Dock, Liverpool

QRA IO83 WAB square SJ83
Lat/Long 53 25N 03 00W County Merseyside

Frequencies as for GB0JAS (+/- 20KHz): 6metres may not be used.

Dates/Times: 27th February - 11th March (excl Sun 5th March). 1700UTC onwards, earlier if possible.

Organised/operated by: Liverpool and District Amateur Radio Society and friends.

GB4JAS @ RAF Lakenheath, Bury St Edmunds, Suffolk

Location: RAF Lakenheath, Bury St Edmunds, Suffolk

QRA JO02 WAB square TL78
Lat/Long 52 20N 00 3E County Suffolk

Organiser: G0MVQ/K0GMO on behalf of U.S. Department of Defense Dependents School, and friends.

Dates/Times: 27th February to 11th March. Mostly pm (1600UTC onward)

Frequencies similar to GB0JAS (+/- 20KHz):

JASON Foundation for Education can be contacted at: 395 Totten Pond Road, Waltham, Massachusetts 02154, USA. The JASON Project is sponsored in the United Kingdom by Barclays Life.

Internet: http://seawifs.gsfc.nasa.gov/scripts/JASON.html

This is an issue on which the FCC and the VEC's give exam teams some flexibility. Our team (Jefferson City, MO - ARRL/VEC) will give a second test to someone who fails a test by one question, if we have time and if they're willing to pay a 2nd fee (I've never had one who wasn't). If they miss by more than one we will not retest them. If they fail a second time (and about half of them do), they're done for the night and I tell them to go study and come back next month.

Sometimes there are reasons other than not knowing the material why people fail. This is particularly true with younger candidates (grade school and high school) who do not have the math background required for some of the higher class licenses. Just this past month I had a high school student fail the General class exam by one, then miss only one on the retest - the difference was in the type of calculations that were contained on the 2 exam versions we used.

Can anyone help ...??

I am a General Class operator who has not been active
for a few years ..

I would like to get back in to HAM radio with Packett radio.

I would like to connect into a TCP/IP network that would
have a gateway to the internet for e-mail ...

I have a 2 meter antenna and a multi band vertical ..
I also have a Radio Shack 10 meter rig.

I need to buy a 2 meter rig .. or would it be better
to purchase a 440 rig ..??

Are there 2 meter rigs specially designed for packett ..??

How do I get a IP number for my PC ..???

I really just need a little help getting started ..

Thanks in advance ...

-Fred

2642. LANODE / BURBNK DX Cluster info pse

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-02 14:34:31 UTC
From: mpfb8@central.susx.ac.uk
Message-ID: <3j4l1n$mdd@infa.central.susx.ac.uk>
Source record: 251520

Hi all. I am able to access the nodes LANODE and BURBNK quite successfully
via VHF and HF routings within the UK and US and wonder if anyone knows whether
from either of these US nodes it is possible to access the US DX Cluster
system. I have looked at the nodes list on these nodes but nothing listed
looks (to me) like a DX Cluster callsign.
I would be interested to take a look at a US Cluster and see what goes
on "across the pond".
Any offers of help greatly appreciated either here or E-mailed direct.

73...Peter, G4BVH.

Source record: 251527

Hey guys, before you jump on me for trying to prove it is legal
to use any frequency, RE-READ what I said about 97.403.

I am inclined to believe it may be illegal to use any
frequency outside of the amateur band, as per the regulations.

However, I also believe the FCC would look the other way if you
actually did use frequencies out of the amateur band, if
it was an emergency.

My main intent was to show that possession of such a radio, for
whatever reason, is legal in the eyes of the FCC.

I'm sure that more than half of the hams in the US possess
radios which can TX out of the amateur service frequencies,
and for those of us who do, we get tired of people telling us
we are criminals for it.

I realize Bobs job is important, but you have to admit he was
trying to use the fact that he works in the field of radiocommunications
to back his claim that possession of modified amateur gear
is illegal. For that, I have a reason to flame.

73's

Oh, and by the way, I work for the Department of Defense as
a Physical Scientist, so don't give me grief about what I do
for a living as compared to Bob. We both support a part of the
government. (which I'm not saying is a good thing).

> >Bob Calkins is an so ignorant of FCC regulations, it makes me
> >wonder how he got the title "communications Officer".

Hmmm, getting personal huh? Usually the sign that somebody doesn't have a good argument. I realize you're quoting the comment but I never saw the original.

The fact is the FCC is citing people, and companies, regards to modifying ham radios to work out of band. Hams who think passing the test also confers a law degree may be in for a real surprise. Read the CFRs all you want...people who read them differently are writing citations.

And the BULK of my OPINION on the subject is that it's a bad idea anyway. I've been in too many situations where trained cops got too excited and screwed up a situation. I've had to tell even sargeants to stay off the air- their "orders" were covering up the guy actually in pursuit.

Hams, great radio people but unfamiliar with proceedures, would be even more dangerous.

And nice goin' on the riding with cops after the 800 Mhz failure. THAT's what public service is all about!

Regards,

> People like Bob are the ones risking their lives daily for us.
> Whatever you do doesn't come anywhere near the importance of
> Bob's work.

Thanks for the kind words...but to be totally honest I'm no longer either a cop or dispatcher. So many years of all that stress dictated a move to something where I don't get called 12-letter names eight or ten times a day. :-)

I now volunteer in the local Emergency Management department, making sure all the backup radios work and people are trained. I do other consulting work for a living...and it's not NEARLY as important as my volunteer work.

This would be a great thread if not for the personal attack. It's people who want to be ready to help. There's nothing wrong with that motivation.

Those folks just need to understand that modifying the radio in ADVANCE of the emergency isn't the same as "doing whatcha gotta do" IN an emergency.

And procedurally...untrained folks struggle anytime they're on somebody else's channel. Liquor agents, game wardens, even the FBI are often given access to local PD channels. Well trained folks? You bet. Do they screw up the radio when they try to use it? Uh huh.

I've gone on too long...it just frustrates me to see well motivated good-hearted folks going about something in a way that might get them in trouble.

73!

Bob

Source record: 251339

Bill Horger (cjds@ix.netcom.com) wrote:

: >Can someone tell me what I can and should do about stray RF
: >from a cable tv.

: Contact your nearest FCC field office. Excessive leakage not only causes
: amateur problems, but a lot of their stuff runs at aircraft frequencies
: (although not as much as long ago) and can be a hazard to aircraft
: navigation! I would contact the cable supplier and let them know what
: you are going to do.

If their leakage is interfering with the Amateur Radio service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct my problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liason to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

: Another source of info is the ARRL; tell them what
: youy want to do, and they can direct you. Don't expect THEM to do it for
: you!

For CATV inteference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

2650. A blind ham needs help...

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-02 18:07:44 UTC
From: helliott@losat.redstone.army.mil
Message-ID: <3j561b$ivm@michp1.redstone.army.mil>
Source record: 251386

Hello;

KC4HRX, Heath Thorsen, is operator of the 147.505 repeater here in Huntsville. His repeater has an autopatch, and the telephone company is insisting on charging him a commercial rate for this phone line. I intend to draft a letter to the local phone company pointing out several facts:
1) Part 97 rules prohibit anything commercial on the repeater.
2) If we operate within the law, we _cannot_ conduct commercial activities on the repeater.
3) Heath is totally blind, has been from birth. He depends on this repeater for his ability to stay in contact with friends and relatives who provide his means of transportation to work, school and other.
4) The phone company appears to be taking advantage of him due to his handicap.

My questions: Can someone send me the applicable legalese from the FCC laws (part 97) which apply (the no commercial activity part)? I need the page and paragraph and the text to cite in my letter.

Does anyone have any suggestions on additional ammunition for coercing the phone company into giving this guy a residential rate (the diff is about $50 per month!)? Comments welcome...

Thanks,
Doc Elliott

2652. GB2RS News 5th March 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-02 19:28:55 UTC
From: dave@llondel.demon.co.uk
Message-ID: <794197735snx@llondel.demon.co.uk>
Source record: 251342
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 5th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

The RSGB London Amateur Radio and Computer Show takes place next weekend,

Three new RSGB Liaison Officers have been appointed, and

Andorra is to use a special prefix this month.

Next weekend, Saturday the 11th and Sunday the 12th of March, the RSGB London Amateur Radio and Computer Show takes place at Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, in north London. This major annual event features over 100 trade stands, an RSGB book and information stand, lectures, special interest groups and a bring and buy stall. RSGB Morse tests will be available on demand, but don't forget to take two passport-size photographs along if you wish to take your test at the Show. There will be talk-in stations on 2-metres and 70-centimetres, and doors open at 10.00 am on each day with priority admission for the disabled. Refreshments are available on site. Further details may be obtained by calling 01923 893929. The official 8-page Show guide, which was published in the March edition of Radio Communication, includes a full programme of events and travel details.

Three new RSGB Liaison Officers have been appointed in Zone B. For Derbyshire, the new RLO is Ken Frankcom, G3OCA, of 1 Chesterton Road, Spondon, Derbyshire DE21 7EN, telephone: 01332 662818. For Nottinghamshire, the RLO is John Coates, G4GYU, whose address is 30 Abbott Road, Mansfield, Nottinghamshire NG19 6DD, telephone: 01623 27257, and the RLO for Shropshire is Tony Colton, G0UYE, 9 Pineway, Lodge Farm, Bridgnorth, Shropshire WV15 5DS, telephone 01746 761203. RLOs hold a wide range of information and are available to help RSGB members in their county.

During the whole of March, members of the URA - the national society in Andorra - will be able to use the special prefix C37 in place of their normal C31 calls. This is in celebration of the 15th anniversary of the foundation of the URA. Special QSLs will be available to confirm contacts made with stations using the C37 prefix.

Now a note for your diary: on Friday the 24th of March, there will be a 'Radio and Communication Day' at King's College, London, starting at 10.00 am. In addition to an exhibition - where the public will be

invited to gain hands-on experience with much of the equipment on display - there will be a series of presentations on the development of radio, from its beginnings and into the next century. The RSGB will have a stand, and representatives will be available to answer questions about amateur radio and the Novice licence scheme. Following the presentations, a plaque will be unveiled commemorating the pioneering work of Sir Edward Appleton. The exhibition and presentations will be held at the King's College Strand campus, located next to Somerset House and close to Waterloo Bridge. The closest underground stations are Temple, Covent Garden, Charing Cross and Holborn. For further information call Anne Robinson on 0171 873 2696.

On the 70-centimetre band, two packet repeaters have closed down. They are GB7TN in Woodbridge, Suffolk, and GB7TV in Tiverton, Devon.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Bermuda, N2MZH will sign 'stroke VP9' until Tuesday the 7th of March. Activity will be on all bands, especially LF and the WARC bands.

From Sri Lanka, ON6TZ and ON4ASQ are active signing '4S7 stroke own calls' from now until Saturday the 1st of April.

And from Madagascar, a German group including DL5UF, DK1CE and DF5WA should be active until the 10th of March on all bands and modes.

Next the Rally News:

We know of no rallies for today, the 5th of March.

Next weekend, we know of one event apart from the London Show mentioned earlier: Next Sunday, the 12th of March, is the Wythall Radio Club Rally, at Wythall Park, Silver Street, Wythall, near Birmingham. It will feature the usual traders in three halls and a marquee, a bring and buy stall, and bar and refreshment facilities. Talk-in will be on S22. For further details contact Chris, G0EYO, on 0121 430 7267.

Now for the HF contest news: The ARRL DX SSB Contest is taking place this weekend on all HF bands, excluding the WARC bands. Contact only USA and Canadian stations and send an RS report followed by your power. The contest ends at 2359 UTC tonight. Brief rules were published in the February RadCom.

Next weekend, the 11th and 12th of March, the RSGB Commonwealth contest will take place from 1200 UTC on Saturday until 1200 UTC on Sunday. Work Commonwealth call areas on CW only and send RST and serial number. The full rules were published in the November 94 edition of Radio Communication.

As usual, HF National Field Day this year will be held over the first weekend in June, the 3rd and 4th. There is a small change to the rules this year - a second receiver will be allowed in both the Open and Restricted sections. That is, you will be allowed to use one transmitter

and one receiver (or one transceiver) plus an additional receiver. Note that a transceiver with a built-in second receiver, such as the FT-1000, counts as two receivers. Groups wishing to compete must send details of the site to be used to: David Hill, G4IQM, 14 The Garrones, Worth, Crawley, West Sussex, RH10 7YT, to arrive no later than the 6th of May. The full rules will be published in the April edition of RadCom, but groups wishing to receive an advance copy are welcome to request one from the RadCom office at RSGB Headquarters.

Next some VHF contest news:

The 144 and 432 MHz contest is taking place this weekend. This 24-hour event will finish at 1400 UTC this afternoon. The rules can be found in the February RadCom.

Next Sunday, the 12th, sees another event in the 70MHz Cumulative Contest which takes place between 1000 and 1200 UTC. The rules can be found in the January RadCom.

Special event stations GB0JAS and GB6 JAS in Nottingham, and GB2JAS in Liverpool, will be on the air this week in conjunction with the 'JASON Project - (Expedition Island Earth)'. GB0JAS will operate from today, the 5th of March, until this Saturday on HF, while GB6JAS will use the 6-metre, 2-metre and 70-centimetre bands. GB2JAS will be active weekday evenings and all day on Saturday until the 11th of March. A special aim of the JASON special event stations is to encourage a greater interest in the UK Novice Licence scheme and there will be Novices operating the stations from time to time.

And now the solar factual data:

The period from the 20th to the 26th of February saw the sunspot indices and solar flux levels decline. Solar activity was very low except on the 20th and the geomagnetic field was very quiet. HF band conditions were better than expected. The sunspot indices declined from 77 on the 21st to 39 on the 24th, but increased to end the period at 46. The mean for the period was 58. Solar flux levels declined from 91 units on the 20th to 83 units by the 24th but increased to 86 units on the 26th. The average for the period was 86 units.

Solar flares were reported on the 20th and the 21st, the largest being a M1.1/1N at 0321 on the 20th, but nothing came of it. The electron fluence declined from a high level on the 20th to moderate levels by the 22nd. The x-ray flux declined from B1.4 units on the 20th to A4.8 units on the 26th and averaged A6.5 units for the period. The 90 day solar flux average on the 26th was 84 units.

Geomagnetic levels were very quiet with a daily Ap index of only 1 on the 22nd and the 25th. And on the 22nd, six out of the eight three-hourly Kp observations were zeros. Unsettled conditions were reported on the 26th with an Ap index of 12 units, the average for the period was Ap 4 units. The state has been 'nil, nothing to report'. The aa indices, as supplied by the British Geological Survey for the period

from the 14th to the 20th of February, declined from active levels on the 14th, at 34.9 nanoTeslas down to quiet levels with only 8.8 nanoTeslas being recorded on the 20th. The average for the period was 18.6 nanoTeslas, about K2. Bartell's rotation number 2207 starts on the 7th of March.

I'll repeat the figures: spots - 58; flux - 86; Ap index - 4; x-ray flux - A6.5.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 17th to the 23rd of February, saw a welcome increase over the last few weeks. The HF bands responded well, particularly on the 17th with the 28MHz band open to South Africa and the 21MHz band full of stations from North America. The average for the period was 8.1MHz. The darkness hour lows also showed some improvement and averaged 3.4MHz with the 22nd up to 4.2MHz. The daytime highs taking place between 11.00 and 16.00 hours with the darkness hour lows mostly around 06.00 hours, but on the 18th as early as 22.00 hours.

I'll repeat the figures: highs - 8.1MHz; lows - 3.4MHz.

And lastly the solar forecast.

This week the quieter side of the sun is expected to be looking our way. Solar activity should be very low and the solar flux levels are expected to decline to the mid 70s. Geomagnetic activity is expected to be quiet for most of the week but active levels may be reached on the 6th, the 10th and the 11th. Ionospheric MUFs during daylight hours for the south are expected to be about 23MHz and for the north 20MHz, with the darkness hour lows about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Tango and G7 Uniform Oscar series, and Novice calls in the 2 0 Alfa Juliet and 2 1 Delta Uniform series.

I am KB8UNC and also a railfan. We live in the Cleveland area and usually watch trains at Betch
train at Berea (Conrail). We do travel quite a bit to other railfanlocations.
I am trying to see if there is any need (want, opportunity) to have a national ?
or regional net to ragchew about our common interest of trains and ham radio.

A common frequency, 2 meter or 6 meter, simplex or repeater, would be a good starting poi
starting point. The idea is to let others know what trains are coming miles
down the line. Sometimes there are good lashups of uncommon pool power and it
is a shame that no one else can take advantage from my being there and seeing
it. I know several train crew members who are also ham operators and I can talk
to them but I am thiking if this network could be expanded. maximum coverage
should be about 100 miles since more than that would not be worthwhile since
it will be 14 hours later before the train gets to my location. :)

What does youse guys think? Is it a pipedream?

q

10base2 use cable whos specs. are similar to RG 58 cable. It often comes in a plenum grade for use in airways/return ducts of buildings. The plenum grade cable is sometimes Teflon. Loss is still about same as any RG58 cable and except for short runs(under 5 meters) is not usefull at VHF.

Is anybody interested in donating any sort of radios to Boy Scout troop 126. By any sort of radios I mean communication radios such as two way or CB, etc... These radios would be of great assistance to use on trips. Currently we only have two Maxons. We find these useful for communication between cars during traveling and between youth leaders while skiing, canoeing, and hiking. If anybody could donate any such radios it would be greatly appreciated.

Thanks

Does anyone have any comments on the Tandy HTX-404 70cm transceiver?

I am thinking of purchasing this unit (on sale new for $229) and was
wondering who actually manufactures the unit for Radio Shack and if
the unit is well built and reliable? Also wondering if there were
any mods available for the unit.

Any information/opinions would be appreciated.

SB DX @ ARL $ARLD010
ARLD010 DX news

ZCZC AE85
QST de W1AW
DX Bulletin 10 ARLD010
From ARRL Headquarters
Newington CT March 3, 1995
To all radio amateurs

SB DX ARL ARLD010
ARLD010 DX news

This week's bulletin was made possible with information provided by Steve, W9NUF, Tedd, KB8NW, Joe, NJ1Q, Wayne, WB6EQX, the Northern Illinois DX Association, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club and Tokyo PacketCluster networks and the Contest Corral column from the pages of QST magazine. Thanks to all.

SPRATLY ISLANDS. Yet another group has announced plans to operate from ''Spratly.'' This operation is to be from Layang Lagang Island, the Malaysian claimed part of the Spratly Islands. This DXpedition will be from March 29 to April 3. The operator list consists of JA9AA, JA9AG, JR9GBJ, JS1QHO, 9M6BZ, 9M6JC and 9M6ST. Two of three stations will be on the air full time, with plans to operate CW, SSB, RTTY and SSTV signing 9M0A. For CW try 1825, 3502, 7002, 10102, 14002, 18070, 21002, 24940, 28002 and 50110 kHz. On SSB try 3790, 7080, 14195, 18115, 21295, 24990, 28495 and 50110 kHz. For RTTY try 7029, 14080, 21080 and 28080 kHz. SSTV will be on 14230 and 21330 kHz. QSL via JA9AG.

The Philippine Amateur Radio Association, PARA, will be leading a team to the Spratly Islands and operate as DU0K on all bands and modes from April 10 to 16. QSL via DU9RG.

ZONE 23. A DXpedition to the Tuva Republic of Russia is being planned by the Foundation for Amateur International Radio Service, FAIRS, and Friends of Tuva, FOT. Yuri, UA4LCQ, and Pat, AA6EG, are organizing a team of American operators to go to the capital city of Kyzyl. The DXpedition should run for nearly a month starting in late May or early June. Interested parties should contact Pat Barthelow, AA6EG, 1388 Boles Court, Seaside CA 93955, (408) 394-5531, or via the Internet to 4947@mgs.com.

LAOS. Reports from the Ohio/Penn and Tokyo PacketCluster networks indicate a station signing XW1 as being on the air. The Tokyo node reports the operator is JH1AJT. Check around 14195 to 14200 kHz between 1300 and 1400z, and again from 0000 to 0100z. QSL via JH1AJT.

ASCENSION ISLAND. Jim, N6TJ, signing ZD8Z, was very active during the past week. He was worked on 21250 kHz at 2000z on Wednesday. He plans to be in the ARRL DX SSB Contest over the weekend. QSL via VE3HO.

ETHIOPIA. ET3BT is a fairly easy catch. Try 14226 kHz at 1945z.

MALAWI. 7Q7LA was worked on 18153 kHz at 1945z from northern Illinois.

MAURITANIA. 5T5JC was quite active all bands this past week and worked on 24900 kHz at 2015z as well as 28468 kHz at 2050z.

TOGO. 5V7MD was active on a net on 14247 kHz at 2300z.

TUNISIA. Danny, ON4VT, was reportedly traveling to 3V-land in late February with plans to operate club station 3V8BB. To date there have been no PacketCluster spots on the New England network for this one. No documentation for this operation has been received by the DXCC Desk.

MADAGASCAR. Ben, 5R8DS, reports Germans DL5UF, DK1CE and DF5WA will be active through March 10. 5R8EI has been worked on 7004 kHz between 2245 and 2315z from New England. QSL via DL2GBT. 5R8EJ has been worked on 1823 kHz at 0222z and 7008 kHz between 0315 and 0345z.

NAMIBIA. DL7UTR and DL7UUO were reported to be signing V5/their home calls through March 19 on CW and SSB on all bands. However a station signing V52UUO has been very active and worked on 3505 kHz at 0443z, 3511 at 0505z, 7001 at 0532z, 7004 at 2149z and 7009 at 2201.

BERMUDA. Jeff, N2MZH, is supposed to become radio-active today at N2MZH/VP9 for a five day stint. He will be on all bands with a focus on WARC and low bands. Jeff prefers CW but will operate RTTY or SSB on request. He will be joined by VP9ID and operate VP9DX in the ARRL DX contest this weekend. QSL N2MZH/VP9 via N2MZH direct w/SASE via CBA. QSL VP9DX via WB2YQH direct w/SASE or via the bureau.

QSL INFO. Wayne, WB6EQX, reports receiving cards for 9K2MU and KG4DX. The correct QSL route for 9K2MU is via WA4JTK. For KG4DX, QSL via K0IEA.

THIS WEEKEND ON THE RADIO. Check out the phone portion of the ARRL International DX Contest. It starts at 0000z March 4 and wraps up at 2400z on the 5th. W/VE stations exchange signal report and section/province. DX stations exchange signal report and output

power. Complete rules appear in the December issue of QST on pages
122 and 124. Good luck in the Contest.

March, 1995 QST page 73 reviews our new product, ScrewGrab... and says,

"Hands-on testing in the ARRL Lab and by other HQ staff members had eyes popping when a mutilated screw locked in a vise wouldn't budge until we applied one drop of this remarkable liquid to
the former "X" on the screw head. Then, bingo, we could feel the slightly gritty compound helping the
screwdriver take hold to make it possible to twist the screw."

ScrewGrab will allow you to remove mutilated screws, phillips head, slot head, torx, allen, hex, etc. etc.
Also rounded off bolts, and most other torqued fasteners. The product DOES NOT HARDEN, wipes
clean with a rag, is non toxic, non-staining and has an unlimited shelf life.

For the complete text of the review, or for our catalog, E-mail to fdoob@apk.net. Include your postal
address. You may also order any of our products via this E-mail address with your VISA/MC. Ask for
details.

73,

Fred, AA8FQ

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 MARCH AND FORECAST FOR 03 MARCH - 05 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 90/34

GOES satellite data for 01 Mar
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.9E+08 (moderate)
X-ray background: B1.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Mar 04 Mar 05 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Mar: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 01 Mar
Learmonth 20 3444 4422
Fredericksburg 22 25
Planetary 25 22

Observed Kp for 01 Mar: 3445 2433
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Mar 20 Unsettled to active
04 Mar 20 Unsettled to active
05 Mar 10 Unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

02 Mar normal normal-poor fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Mar normal fair poor
04 Mar normal fair poor
05 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
02 Mar -10 10 to 30% below predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
03 Mar -5 10 to 20% below predicted monthly values
04 Mar 10 Near predicted monthly values
05 Mar 15 Near predicted monthly values

COMMENT: HF communicators in northern Australia region should
continue to use the monthly T index of 15. Depression affecting
southern Australian region only. Townsville MUFs were enhanced
10-30% again yesterday. Hobart MUFs were depressed by up to 30%
for most of the day with strong spread F observed during local night.

If the 202 is any indication, the 404 is a very rugged, well
built transceiver. Not the smallest, coolest, or lightest, but also one
of the cheapest.

: any mods available for the unit.

Like for wideband Rx? Duct tape a scanner to it.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 847 25-26th FEBRUARY 1995

THIS WEEKEND IS THE TIME OF THE CENTRAL COAST FIELD DAY IN NSW. THIS IS THE BIGGEST FIELD DAY IN THIS PART OF THE WORLD AND ANARTS WILL BE / HAS BEEN THERE ACCORDING TO WHICH BROADCAST YOU ARE WATCHING.

AS USUAL ON THIS WEEKEND THE BROADCAST GOES TO AIR ON TWO DAYS -- MORNING ON SATURDAY AND EVENING ON SUNDAY. THE USUAL REASON APPLIES -- WE ARE ALL AT THE FIELD DAY ON THE ANARTS STAND -- (OR IN MY CASE, WANDERING AROUND WITH A VIDEO CAMERA AND SPELLING PEOPLE ON A COUPLE OF STANDS -- ED.).

WHY NOT COME ALONG AND SAY HELLO? WE WILL BE VERY GLAD TO SEE YOU AND TALK ABOUT RTTY AND SOLAR CONDITIONS AND POOR CONDITIONS, AND ALL THAT JAZZ.

(EXPLANATION. I AM ALSO IN THE GLADESVILLE AMATEUR RADIO CLUB WHICH DOES TELEVISION ON CHANNEL 35 UHF, AND I DO A VIDEO REPORT ON THE FIELD DAY FOR THE FOLLOWING WEDNESDAY EVENING TRANSMISSION -- AND -- I MAKE VERY SURE THAT ANARTS GETS A GOOD COVERAGE, HI HI. ED.)

SEE YOU THERE (- OR, DID WE SEE -YOU- THERE?)

This Week in Amateur Radio Celebrates Edition #100

"This Week in Amateur Radio", North America's satellite-delivered amateur radio news and information service, celebrates its 2nd Anniversary this Saturday, February 25th, at 7:30 PM EST, with the airing of Edition #100.

Along with the program's regular weekly features, host Stephan Anderman, WA3RKB, will anchor numerous live telephone call-in segments throughout the program. Calls will be accepted at 518/664-6809 to discuss amateur radio topics such as the new vanity call sign program; new amateur frequency allocation activity at 219, 902, and 2400 MHz; FCC reorganization and regulatory activities; or whatever comes to mind.

Originally known as "Amateur Radio Weekly" and first carried on the Spacenet III commercial satellite from southern California, production of the program moved to central New

York in February 1993 when it was renamed "This Week in Amateur Radio". It was taken over the following month by the current production group and went on the air with a new, expanded format from the Albany, New York area on March 7th, 1993. The show went on a four-week hiatus during December 1993 in a transition from S3's "Let's Talk Radio Network" to the Galaxy III satellite and the new "Omega Radio Network", which features communications hobby programming. "Omega" and "This Week" moved to AT&T's Telstar 302, transponder 21 (11V), 5.8 MHz audio (4.120 GHz) earlier this month. T302 is located at 85 degrees west longitude in geosynchronous orbit.

"This Week in Amateur Radio" is produced by Community Video Associates, Inc., a New York not-for-profit corporation, and heard on nearly 100 amateur VHF/UHF repeaters throughout the United States and Canada, as well as nightly on the Gateway 160 Meter Net, WA0RCR, at 1860 kHz. Production, transmission, and maintenance expenses are underwritten entirely by contributions from the amateur community and program affiliates.

[No WIA news due to Field Day]

WICEN News

This week's news will be brief, due to the Central Coast Amateur Radio Club Field Day today (Sunday).

WICEN members will be saddened to learn of the passing of Howard Freeman, VK2NL, on the 17th February; full details appeared in last week's broadcast, but could not be included in the WICEN segment due to time. Howard was responsible for rebuilding WICEN (NSW) during a period when there was little interest in the organ-isation, and as a result of his hard work he was made a Life Member; he will be missed.

Next month is going to be busy with the "RTA Big NSW Bike Ride" from the 4th to the 11th of March for which the current contact is John VK2AMH; the Watagan Horse Enduro commanded by the eponymous Dan VK2GG on 5th March (with a 4am start!), the John Moyle Field Day on the weekend of 18-19th March, in which Hunter WICEN at least will be taking part; and on the same weekend the annual Bungonia Cave Rescue in which Mark VK2XGK is looking for volunteers who won't necessarily have to go underground, and Mark can be contacted at work on (02) 936-8689.

A major event in April is the Oberon Car Rally on 29th April, and about 20 people are required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News Briefs

The papers recently reported the exploits of computer hacker Kevin Mitnick, who "spoofed" computers on the Internet in order to

steal software and gain access to sensitive data. For example, Mitnick obtained credit card details for 20,000 members of Netcom Communications of San Jose; he also broke into the computer that is supposed to protect Motorola's internal computer communications network from intruders.

Mitnick made the mistake of treading on the toes of "cyber-sleuth" Tsutomu Shimomura, who tracked him down, and led the FBI to the hacker's doorstep.

One minor detail that didn't make it into the press reports is that Kevin Mitnick is apparently a Radio Amateur, holding the General class callsign N6NHG. The things some amateurs get up to when the sunspots are low ...

***

A few weeks ago, we mentioned some technical advances in the area of battery power; a few more details have since come to hand. Noburu Oyama of the Tokyo University of Agriculture has written about the use of organic plastics in batteries.

Two conducting polymers, dimercaptan and polyaniline, can be used in place of metal electrodes, thus reducing the battery weight; they also offer a high storage capacity and good mechanical strength. They have already been used successfully in lithium batteries, and new versions of the polymers promise even better performance.

***

It's that time of the year again ... Michelangelo's birthday falls next Monday, 6th March. It's also the date that the Michelangelo virus becomes active. If your PC is infected with the virus, and you "boot" your PC on that date, you are likely to lose all information from your hard disk.

This virus has been around for a few years now, but for the last two years Michelangelo's birthday has fallen on the the weekend, so business computer users generally haven't been affected.

So, before next Monday, all PC owners should scan their computers for the virus--don't say we didn't warn you.

***

Speaking of viruses, the Australian Tax Office suffered some embarassment last week when its 26 national offices were brought to a standstill for 24 hours, thanks to the "No Frills" virus. The virus was discovered at the ATO's Box Hill office in East Melbourne, and the staff at all ATO ofices had to process data manually until every PC had been checked.

***

Intel has unveiled its successor to the Pentium chip, the "P6" which they say will run twice as fast as its predecessor, due to its improved internal architecture.

Intel says that the P6 does not suffer from the Pentium's problem with the floating point unit--otherwise they might have called it the P5.997534--but they don't guarantee the chip will be flawless. When flaws are discovered during testing, they are resolved, and a new version or stepping of the chip is produced. Intel said the P6 would initially sell for between US$900 and US$1000. Intel expects to introduce the P7 around 1998.

"News Briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, please send a clipping to the Divisional office.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout hall, corner of Bellevue Pde, and Blakesley Rd., South Hurstville at 7.30 pm next Wednesday evening the 1st of March 1995.

The Society's guest speaker for this meeting will be John Hams VK2JH. John will be giving an interesting talk on details regarding the design and installation of the new Government Radio Network which is currently under construction, installation and testing.

This network, using latest state of the art digital technology, is planned to centralise most of the New South Wales Government's many authorities who use radio communication to assist their activities within the community.

Members and interested visitors should not miss this opportunity to improve their knowledge of this major change by the government to change the way many of our public utilities use the radio spectrum.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from -- Allan VK2XF Publicity Officer

Waverley Amateur Radio Society

Now that the Society has a permanent venue at Rose Bay, it is commencing classes for prospective amateurs and those wishing to upgrade their licences. A video based theory course is to start on Tuesday the 21st of March and will continue every Tuesday for 20 weeks. Our first morse class aiming at the 10 wpm test is nearing a close and a new class will follow. Would anyone interested in either class please contact the Secretary, Grant Hinchcliff, VK2TU, on 957-7100 during working hours or 319-1913 after hours.

Remember that the first Friday of every month is now Project Night, so come along to our premises in Vickery Avenue, Rose Bay on the 3rd of March at 7:00 pm and bring along any technical problems or just drop in for a rag chew.

Simon Buxton - VK2EII - Publicity Officer

Blue Mountains Amateur Radio Club

The Blue Mountains Amateur Radio Club invites one and all to our next meeting on Friday, 3rd March, 1995.

The Guest Speaker for the night is Ray, VK2FXO sysop of VK2CZR. Ray will speak on the subject of Packet Radio and Bulletin Boards in particular.

The meeting will be held at Springwood High School, corner of Grose Road and Chapman Parade, Faulconbridge; enter from Chapman Parade. The usual tea, coffee and delicious scones will be served.

All interested are welcome.

Alan , VK2ICL
Publicity Officer

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Short Wave Listeners ...

St George ARC meeting. . . . . Wednesday
Waverley ARC Project Night . . . . . .Friday
Proposed new Amateur Licence fees scheduled to come into effect, 1 March. but this may be delayed until April - so please keep writing!
RTA Big NSW Bike Ride (WICEN). . . . . Saturday through 11 March
Daylight Saving Time ends. . . . . next Sunday
Summerland ARC Annual General Meeing . . . . . 5 March
Michelangelo's birthday (check your PC for the virus!) . 6 March
Signals Reunion at Wagga Wagga . . . . . 11-12 March
Bungonia Cave Rescue exercise (WICEN-Mark VK2XGK). . 18-19 March
Hunter WICEN meeting (Pauline VK2TGB). . . . . .20 March
Waverley ARC Amateur classes begin . . . . . .21 March
Divisional Trash and Treasure Sale . . . . . .26 March
Easter Monday public holiday . . . . . .17 April
Hunter WICEN meeting (Pauline VK2GTB). . . . . .17 April
International Marconi Day. . . . . .22 April
ANZAC Day. . . . . .25 April
Oberon Car Rally (WICEN--Alan VK2YYJ). . . . . .29 April

If you have an event you'd like publicised on the weekly broad-cast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066. Items may also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

Field Day Press Release

In response to several enquiries, hereunder please find the text
of a leaflet handed out at the Wyong Field Day, entitled:

"WHAT'S GOING ON IN VK2" ????

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o

``MAY YOU LIVE IN INTERESTING TIMES'' is supposed to be the great
Chinese curse! If so, NSW has been well cursed in the last twelve
months. It has been a very interesting time since the last election.

LEGAL POSITION:
To date the matter of the last election has not been resolved. A
legal brief has been prepared and is ready for submission to the
Court. This Division cannot have an AGM at the usual time in April
until permission is given by the Court. Costs, despite what you
may have heard, have been kept to a minimum, as the brief was
prepared largely by ourselves. Remember these circumstances were
created under the previous Council. None of the members of that
Council remain on the present Council.

ADMINISTRATION:
In view of the above situation an agreement was reached with all
affected persons, that the Institute should function in a caretaker
role. This agreement meant that despite the council not having a
proper legal status, day to day running expenses could and should
be met. These costs included things like telephone, rates, wages,
electricity, stationery, postage, book purchases and sales, to name
a few. Council has met "in public" rather than "in camera". All
such expenditure has been approved by consensus.

COMMITTEES:
The council has established several committees which were considered
urgent and necessary. These are the NSW Technical Advisory Committee
(NTAC). The members are Barry Sullivan VK2BZ, Chair; Ian Rosser
VK2XB; Barry White VK2AAB; Dr. Tony Farrow VK2TJF; Bob Mayer VK2BMU
and Glen English VK2JPR. A Committee to rewrite the Memorandum
and Articles of Association: those members are Colin Duhig VK2XXE;
Cesar Miranda VK2TCM and Eric Fossey VK2EFY; and finally a committee
to investigate the proposed new licence fees, comprising of Peter
Jensen VK2AQJ, Chair; Cesar Miranda VK2TCM; Richard Murnane VK2SKY
and Dave Horsfall VK2KFU. After several meetings ALL Repeater,
link applications and the like have been recommended for approval.

As at 13th February, 1995 there are NO outstanding applications. SMA approval should now only be a matter of course. The Memorandum and Articles of Association Committee have been completely re-written and are now being fine tuned.

LICENCE FEES......TAXES ??
This Division was the first to bring this matter to the attention of the Amateur Radio Fraternity. In a Broadcast on 18th December, 1994 and via the Packet network, this Division alerted amateurs to the proposed increases in licence fees. The increased cost was identified as a "Consumer Tax" and all amateurs were encouraged to write to their local Members of Parliament. Whilst other Divisions were closed all during January, this Division was not sitting on its hands. Letters were written to all members of the Government Arts and Communications Committee; a committee exclusively the province of the ALP Government.

Your Council Fees Committee met at the request of the President and in ONE WEEK after burning much midnight oil, came up with what can only be described as an excellent submission. This submission not only argued the case but came up with what we consider to be acceptable, viable alternatives to avoid any fee increases. You will receive a copy of this submission together with copies of the letters sent to various Politicians in your March Amateur Radio magazine.

RESIGNATIONS:
Much has been written on Packet Radio regarding the resignation of persons from the Divisional Council. Four persons in all have left Council since "the election" last April. Despite what has been said, these people left of their own free will. It was really a question of numbers. Some of these individuals wanted to "maintain the rage", the majority did not. They were simply outnumbered. They resigned.

LONGER TERM OBJECTIVES
It is no secret that the last 18 months has been a very difficult time for the NSW Division of the Wireless Institute of Australia. There has been much animosity and in-fighting which can be seen as stemming, in part, from problems of the form of the organisation and lack of communication which have built up over many years.

Now seems to be a time for reconciliation and bridge building. Amateur radio is clearly under threat as the actions of the SMA in recent times make very clear. It is not a time for recriminations or finger pointing but for determining appropriate directions to be going in, with proper involvement of the members and the affiliated clubs.

The NSW Division will, as soon as the legal situation has been resolved, convene a Special Meeting of the Division, firstly to establish the procedures for holding an election but secondly and

more importantly, to obtain input from the members as to what the major goals of the Institute should be in the longer term. Despite the problems that the WIA has had, it remains THE ONLY SIGNIFICANT channel of communication to the Government and for that reason should be supported by all Radio Amateurs.

In this context, the level of membership remains a key matter for concern which is only likely to be met by the WIA being seen to be doing useful and relevant things for its members and for the service in general.

If you are a member, indeed even if you are not, we need your support and input to our deliberations. Messages of a constructive nature will be received with interest.

(signed)

MICHAEL B. CORBIN,
PRESIDENT.

Recently I heard or read about a court (an appellate or possibly a
federal court) overturning a local ordinance against satellite dishes on
first amendment grounds. The item went on to speculate about
the rulings impact on restrictive zoning and condo-nazi regulations, but
it struck me that it also has implications for local laws restricting ham
antennas. Maybe this is the "Light" that was shinning in the Hempstead
officials eyes.

: > to summon aid. However, it also said that POLICE CHANNELS are taboo.

: Well that's just dandy! Clearly, if you get into trouble with this advice,
: Gordon will come by and bail you out :-)

: There seems to be a confusion between what Part 97 permits and what it
: does not forbid. It would be a serious mistake to act with the assumption
: that what Part 97 does not forbid is thereby permitted without limit.

: Apart from FCC communications emergencies, RACES and the President's War
: Powers, this is how the FCC guides us:

: 97.403 Safety of life and protection of property. - No provision
: of these rules prevents the use by an amateur station of any means of
: radiocommunication at its disposal to provide essential communication
: needs in connection with the immediate safety of human life and immediate
: protection of property when normal communication systems are not
: available.

: Remember that part 97 does not prevent anyone from saving lives or property.
: That is not the same thing as saying that part 97 PERMITS anyone from
: exceeding the permission of their license grant. If you get into trouble,
: you will receive a complaint under some other federal or local code and it
: will not be as a breach of Part 97.

Oh, I don't know. I think the phrase "any means of radiocommunication at
its disposal to provide essential communication" can be construed to
give permission to an amateur to transmit out of band in an emergency.
It is all in how the FCC and the federal courts interpret that phrase,
whether broadly or narrowly.

Besides, I seem to remember something to the effect that an FCC-declared
emergency can have the effect of allowing amateurs to use FCC-designated
frequencies for emergency traffic, whether in or out of the ham bands.

> Darin Arrick, KB5KHR (Advanced)

Darin's question raises two issues:

1. Can this be done technically, i.e., how well will it work, etc.?

2. Can this be done under the rules of the Amateur Radio Service?

Several respondents have dealt with the question's rules aspect, and they
pointed out the problem of the content of the link infringing on the
nature of the "amateur" service.

Leaving that issue aside for the moment, I would be interested to hear
more about the feasibility of the 56Kbps radio modem link and its technical
performance.

One respondent, drayegon@enterprise.america.com, commented that the link
performance would be poor:

"you just think your running 56 k
actually with bad packets and retries it is less than 14.4 more like 4800"

Although Ray's grammer and spelling don't lend much weight to his conclusions, I wonder if his assessment of the link's performance is correct?

If the suggested device, WA4DSY 56kbps modem, really only produces a through-put the equivalent of a 4800 bps link, it seems to be badly named.

Can anyone else comment on this? Is there a viable radio modem link that can be operated under the rules of the Amateur Radio Service that produces a truly high-speed link?

I would appreciate hearing of any equipment that can do this.

SIncerely,

Jim Hebert

i have not used this Tnc, so I don't have any experience with it, I do use windows, and have tried to "tweak" Dos programs to run under windows. My feeble advice is, look at the PIF for terminal, try different "time slices" If you don't have success, try some other terminal programs, there are many. Most are available via shareware. sorry I can't be of much help, just a few thoughts on the issue.

> Don't Tread on Me

Dan,

EVERY Amateur radio receiver that operates above 30 MHz is subject to Part 15 rules.

EVERY Amateur radio manufacturer submits his radio for Part 15 testing within a certain frequency range, and is then Type Accepted for receiving certain frequency range of operation.

Many times even the wide receive modifications are not legal as the receiver has not been tested
in those frequency ranges, therefore would not pass FCC Part 15.

So then your radio will not be type accepted for receiving outside the tested range and would be
illegal. Manufacturers have no control of where you operate your radio and most likely would not
be held responsiable for you operating your radio beyond the Part 15 Type Accepted range.

Look on the back of your radios that operate above 30 MHz and you will find
a FCC type acceptance number, the only part of that radio that is tested is the receiver
for compliance with FCC part 15 rules. The transmitter falls within Part 97.

HF radios are not tested for anything, just must comply with Part 97. Only H.F. amplifiers are
type accepted to verify they do not operate on the 11 and 10 meter bands.

Be aware of just where the manufacturer had the receiver type accepted, maybe he only chose to do the bona-fide amateur radio frequency bands, not the business band, ie: national weather
service etc frequency ranges. AND yes this is done by some manufacturers. SO you will be Illegal
for using the receiver for receiving outside of the amateur bands. The manufacturer only needs
to supply you with the frequency range of operation, receiver coverage in the owners manual,

shows intent of operation and have a FCC ID number in place on the radio. If you decide to open
the raceiver beyond the type accepted frequency range, then it is your baby.

As one who is in the business of Amateur radio and Land Mobile radio.
I must not imply that the radio I sell can be used in a service for which it is not intended.
Kenwood got into a jam for advertising the TS-50 would transmit at 27,500. Now really
the FCC does not care just where a HF radio can transmit. JUST do not advertise it to be used
in a service that is was not type accepted for. By the way the TS-50 will still transmit at
27,500 MHz out of the box.

That is exactly what happened to a Amateur store in Seattle a few years back, a salesman
supposedly told a FCC inspector, who did not identify himself, that an amateur transceiver could
be used within the business band after modification. The store was cited for the intention of
the radio being used in a service that is was not type accepted for. Also received a $5000.00
fine.

Land Mobile radios must always have a sticker on them at shows ststing they can not be sold or
leased if they are shown before type acceptance is given to the radio. We have also started
doing this to the amateur products to keep ourselves covered.
You may not quote pricing for a non type accepted radio in the Land Mobile business, as the FCC
will and does cite you for this practice. If you read the letter from the FCC you received.
He is telling you to go ahead and modify your radio, BUT never use it on frequencies outside the
amateur band. if you do you could and most likely will be subject to a rules violation.

I am posting this mesage for KC2Q - Mike DiPersio of Bradley Beach
New Jersey. (908)-774-1095.
If you are thinking of attending the HAMVENTION HAMFEST in Dayton
Ohio this year, why not be take care of all the way there and back?
Mike (KC2Q), for the past four years, has organized a non for profit
package that includes bus fare on a chartered private coach, motel
accomodations, hamfest entrance fees, and benquet tickets. Costs for
the entire package for one person are around 275.00 but will come
DOWN if more people sign up. In fact, slots are also available for
those who only want to participate in the bus ride. (THE BUS MAKES
A FEW STOPS IN NJ and PA). If you are thinking of going, why not
call Mike in New Jersey for more details. His telephone number is
908-774-1095. His fax number is 908-774-7093. Have a good time.

More than likely the 404 is made by the same people who make the
HTX-202 for Radio Shack.
The unit is made by MAXON (spelling?), but made to specifications
from the ICOM company. ICOM does not make the radio.
I have a 202 and am thinking also of the 404. I think they are good
radios.

From: brucem@eskimo.com
Message-ID: <D4uvBn.Do0@eskimo.com>
Source record: 251407

As the person who seems to have started this interesting debate, my intent was to try to clarify if the right existed among ham operators to use out of band frequencies in case of emergencies...should all other means of communication fail. Personally, if all other means of communication would fail, I'd not hestitate to use whatever was available, with or without license, to save my daughter's life. FCC or local penalties would be small issues compared to the benefits of the transgression (assuming there was a transgression).

I think someone suggested why a ham would want to have the ability to transmit out of band: to be prepared, and to be able to help, should that be the only way to get help. Not to create problems for authorities such as police or fire.

My interest might be construed to be more as whether the FCC actually backs up the hams who might find themselves going out of band for that life-saving call. If the FCC won't back them up, then I think it would be a sad day for the purposes of communication, one of which has such great ability for good results--the life-saving call regardless of frequency.

I have a copy of David Webb's letter, and what he quoted in the article is what is in the letter.

Thanks for the interesting reading, and if someone could be more specific about the San Diego case, I'd appreciate case numbers or whatever and the jurisdiction. I think reading the FCC's own conclusion in their own words might be interesting.

2686. TH-28A FOR SALE in EUROPE

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-03 08:28:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2F56D3DE@smtp>
Source record: 251408

I have a Kenwood TH28A for sale. It is a 2 meter transceiver plus a 430MHz receiver. It can transmit in the 144-148MHz band and it also tunes from 118MHz up to 173MHz and from 340MHz to 400MHz and from 400MHz to 520MHz, FM. It offers 40 memories, a charger (110V needs a small 220/110V transformer) and is the current model of Kenwood.
In Original box for BF 12000 (or UKP 250) (costs UKP 400 new in the shops) includes surface mail to Europe.
Thanks,
Peter

Greetings Y'all

I have a student in the Novice/Tech class Im teaching that wishes to
use ATV to transmit from a RC model plane so they can get a cockpit view
from the ground. This sounds like a one way transmission.

How does the FCC view using ATV in this manor and is there anyway he could
do it that would make it conform to the rules + regs ??

Jan-Martin (martin@agnld.uni-potsdam.de) wrote:
: Recently, I got some meters of thin ethernet coaxial cable 10 BASE 2
: or IEEE 802.3. I intend to use it as antenna cable on VHF, but I don't
: know any data about it except the impedance of 50 Ohm. Does anybody
: have a catalogue or another data collection where one can find the
: damping rate of this cable (In particular I'm interested in the dB/m
: at frequencies around 145 MHz, but any other figures are welcome, too)?
: For easier reference I copy here the whole stuff written on the cable:
: KERPENspecial (I suppose this to be the trade mark) AWM STYLE 1354
: 60~C 30V THIN ETHERNET 10 BASE 2 IEEE 802.3 . The tilde stands for the
: "degree" symbol.

Most of this cable is a low cost version of RG-58. The loss around
145MHz is between 4.5 and 7 dB/ft (sorry I only had the english unit).
Another thing about most of this cable is the how bad the shielding is above
20MHz or so. Most of what is used for thin ether today is twisted shield.
The shield clamping is only 20dB above 20 MHz. Braid improves a bit, but
for better then 60dB inthe VHF+ range you need braid and foil. Belden has a
nice graph explaining the difference in their data books.

Message-ID: <3j7gbq$elh@newsbf02.news.aol.com>
Source record: 251372

Appreciation is expressed to all of you who responded to my question regarding Club station callsign identification. A synopsis follows:

Q. What callsign shall or may be used by operators of a Club-licensed amateur radio station?

A thorough investigation of the pertinent FCC regulations dealing with station identification confirmed that *either* personal or Club callsigns may be used. Individual Club stations set their own policy with regard to station identification. Use of the Club callsign places the operator in the role of a control operator with ultimate responsibility shared by the operator and the station license trustee.

"It's entirely a matter of club policy", writes KG2S.

"There is NO FCC requirement to use the station callsign, rather it is the choice of the actual owner of
the equipment. So we actually agree and, more importantly, the issue would never result in any type of FCC violation because it is a private matter between the owner of the equipment/station and the operator. The point of my response was strictly from an FCC regulation point of view which is, I believe, the type of answer that the original questioner would expect", concurs K2UNK.

In conclusion, the Birmingham Amateur Radio Club Board of Directors took steps during their March meeting to allow use of personal callsigns, when desired, while operating Club station equipment. A few caveats were enacted to insure that periods of operation, with any callsign, were logged, and that operators understood they were bound by the privileges of their license class when operating as the control operator.

It is the hope of the BARC that this action might encourage greater use of Club station facilities.

> I realize Bobs job is important, but you have to admit he was
> trying to use the fact that he works in the field of radiocommunications
> to back his claim that possession of modified amateur gear
> is illegal. For that, I have a reason to flame.

Wrong, podner. Two different points.

My work experience doesn't make anything illegal. My work experience allows me...or anybody else....to express an opinion based on that experience.

My opinion is that untrained folks on a public safety frequency are more likely to screw things up than be of assistance. That was far more the bulk of my post- and I thought was pretty clear.

For me, the legalities are secondary....but some newby who reads your post and then gets a ticket might feel differently.

I'm impressed by your desire to be ready for an emergency. I hope that IF something happens you DON'T get cited, and are able to make a difference.

More text deleted

I have been away for anateur radio some time, the last arrl handbook I have
is 11 years old.
a year or two ago I remember sombody saying the FCC had just opened up a band
that was for spread spectrum and was pretty much a free for all within a few
parameters like under a given wattage and >10 freq changes/sec.
does this ring a bell with anyone.

If we can find a band that will allow us to use the skills learned from
amateur radio to build equip. but use it for a slightly grey area as
far as business use or content, like usenet, that would be the ticket.

If this does ring a bell with anyone, is the power limitation amp
input, output or ERP? if it is not ERP with a good enough dish
or yagi a watt should be enough.

While we are at it looking in the handbook last night I noticed something
that evoked many an argument at the time with people I know.

several blocks of freqs, 50-54 in particular are to be used for A0 xmissions
only. Others claim this is code and A1 is FSK type code.
I say A1 is carrier on/off type code and A0 is worthless unless an amateur

radio operator needs a beacon for an amateur rocketeer's cruise missle project.
Why is such a large percentage of some bands allocated to such a useless mode? is it the feds way of giving us more space but not really?

Marc Christensen

> Oh, I don't know. I think the phrase "any means of radiocommunication at
> its disposal to provide essential communication" can be construed to
> give permission to an amateur to transmit out of band in an emergency.

You bet...but the question is how did the "means" get to be at the
ham's "disposal?"

My understanding of the San Diego incident is that the ham was NOT
cited for the actual transmission....but WAS cited for having the
radio modified in the first place.

Is that not the case?

If it IS the case....then it makes a fairly strong statement
that modifying your radio PRIOR to the emergency is illegal.

Jim
A moderate speed link *can* operate with throughput near its raw
channel capacity. Here in Northern California, we are running several
of my radios with Ottawa PI2 cards doing clock and data recovery at
230.4 kbps. Over a single hop with 386 DX/40 hosts and running IP with
JNOS, we see as much as 18 kilobytes/sec *throughput*. This is a little
more than 60% of the raw channel capacity of 28.8 kbytes/sec. The
reduction is related to the cpu and s/w. Long pings, say 2 kbytes, have
round trip times which are even closer to the maximum possible.

Multiple hop connections work just as well or even a little better.
We see 5-6 kbytes/sec FTP transfers over 3 hops. This all works because
the system design and path/site selection was such to allow low bit
error rates. Note that this is over a dedicated backbone and not an
ALOHA situation. I believe that the answer to (1) is yes. However, it
is a qualified yes since it requires different hardware and a degree of
attention to system design not presently common within amateur radio.
From what I know of the wa4dsy/GRAPES h/w, I believe that it *can* also
operate with throughput which is a significant portion of 56kbps. It
seems I remember some of the Ottawa guys mentioning getting 5-6
kbytes/sec throughput over a single hop when everything is working.
Please see Barry McLarnon's, VE3JF, paper in the ARRL CNC proceedings for
more details of their experiences with 56 kbps. I also have a paper in
the 10th CNC as well as on the WWW page listed below with some more
experiencial details from this area.

The system here has been connected to the Internet, though at the moment the gateway is being moved and it is not yet back in full service. Even with a 19.2 kbps wireline connection to the internet, which was the dominant bottleneck, Mosaic ran pretty decently and file transfers across the globe were acceptable. I was able to send multi-100Kbyte files from my host in the hamshack(garage) to RA3APW's gateway machine in downtown Moscow at throughput of around 50kbytes/minute.

What is or is not permissable WRT to question (2) is probably not nearly so clear as the answer to (1). I suspect there may be discussions, arguments and opinions presented by any number of armchair lawyers over it. However, there's no question that, for me, the technical question and challenge is a lot more interesting.

So that I don't generate more requests for support due to the above h/w description than I'm prepared to service, I now redirect them to:

```
|--------------- N6GN's Higher Speed Packet WWW Page -------------------|
| |
| ftp://col.hp.com/hamradio/packet/n6gn/index.html |
| |
|-----------------------------------------------------------------------|
```

There are no kits, parts list or construction articles there but there *is* further information on what we've been up to.

Date: 1995-03-03 16:55:17 UTC
From: mudaw@uxa.ecn.bgu.edu
Message-ID: <3j7hll$6mb@ecom4.ecn.bgu.edu>
Source record: 251429

Gary made a very good point about the type acceptance of the receiver. This was addressed in my letter to/from the FCC, and in my specific example, aparently the receiver in the FT-23R was type accepted for the frequencies it can receive even after the modification. A lot of receivers are type accepted for a wide range of frequencies because they are used in several different models of radio. The FT-23R for example, has a receiver which was used in the commercial versions which were tuned to the 151 MHz (or somewhere around there) .

Gotta run, getting close to lunch time.

2710. Re: Out-of-band emergency calls

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-03 17:08:14 UTC
From: mudaw@uxa.ecn.bgu.edu
Message-ID: <3j7idu$8l4@ecom4.ecn.bgu.edu>
Source record: 251436

One of the problems is that no matter how much good you are doing, or who'se life you are saving, there is going to be the one guy in the filed who is going to say "hay, how'd he get on MY frequency". The ego of law enforcement as a whole has been proven to be pretty big. Once one cop gets jealous that you were using HIS frequency, all hell will break loose. When I went to court over my radio and its capabilities, the county sheriff kept going on and on about HIS frequencies, and how he has to protect them.

I do not disagree with his side of the issue, but if I was charged with using the radio, even if to save someones daughters life, the FCC will not stand behind me and support me. The FCC simply does not get involved in individual cases. Hence why I think it is important for people to acquire as much supporting evidence as they can get to show the intent of the FCC.

Again, if you take the regulations as literally as they can be read, it is illegal to use frequencies outside of the amateur band even if the biggest emergency in the world happend.
The regulations do not say 'it is illegal', but they do say any amateur station may use any means of radiocommunication..... but an amateur station is defigned in the regulations as basically the equipment used for operating in the amateur service frequencies. This does not include police service frequencies. Therefor what can we conclude?

All I know is I wish I would have had my Yaesu when I saw a Semi tractor flip on the interstate on-ramp a few months ago. The driver was injured, and I didn't have any way to get help except drive 3 miles to the next exit and call. 10 minutes seems like forever when someone may be critically hurt.

>about 2/3 of the DX is on CW.

OTOH, according to the Honor Roll stats, more stations make it with phone than CW, and more still using mixed modes. Of course this pre-supposes that DXing is your game. If it is, being able to operate Morse is a useful tool to have in your arsenal, but so is being able to operate phone, and lately, other digital modes. If DXing isn't your game, most of the other digital modes share the spectrum efficiency of manual Morse to one degree or another, and typically offer more throughput, which is useful if you desire to exchange ideas rather than postal cards. (Tautology: Morse is useful for working stations running Morse.)

Voice QSOs will likely require more power, or settling for fewer miles, or waiting for good band conditions, than any of the digital modes (including manual Morse). However, that may be just fine if making 326 "country" DXCC isn't your end all be all reason to operate. You may be very happy to just chat with other amateurs whose signals make for comfortable conversation. Or you might prefer exchanging pictures via SSTV to exchanging contentless 599 reports with some group squatting on some semi-submerged reef. Or not, it takes all kinds. If you are a DXer looking for a new challenge, then QRP phone certainly is it. With patience and skill, you can work the world on less than 5 watts SSB. It will be a greater challenge to your operating skills than just using Morse.

What's my point? Maximizing your DX score isn't the only reason to operate HF. For many of the other activities carried out on HF, manual Morse operation isn't the first (or even second) choice. And even if you are looking for a new way to run up score, you might find a bigger challenge by using QRP phone rather than manual Morse. Using manual Morse is the *lazy* way to make DXCC. :-)

>goes on to say that most transceivers are never mounted in a vehicle.
>
>Well, I'm confused! What is a beginner to do if he's interested in DX on both
>CW and voice?

The main reason most (all?) HF equipment is in the form of transceivers today has little to do with mobile operation. Rather it's a matter of economics and modern amateur shack size. It's obviously cheaper to use one box and one power supply than two. And one box takes up less room on today's operating tables than two. Plus, the manufacturer can guarantee that the transceiver's receiver will work with the transceiver's transmitter. He can't be so sure of that if you buy transmitters and receivers as separate boxes, especially if they are from different manufacturers.

Most, but not all, transceivers do use their VOX circuitry to implement semi-break-in operation. This is often fine for CW, and a big step up from having to manually throw a TR switch. However, there are some manufacturers, most notably Ten-Tec, who offer full QSK break-in on their transceivers. That's every bit as good as you'd get with separate boxes.

>1. It looks like the most affordable (new) pre-fab equipment is 2m and dual-band
> HT's but 2m seems rather limited to me. Isn't 2m mostly local, short-range comm
> thru local repeaters? (I have heard locals trying DX when conditions permit,
> mostly late at night)

Certainly the bulk of 2 meter operation is FM, and via repeaters. However, you'll also find amateurs operating through amateur satellites with SSB, CW, and other digital modes. You'll also find amateurs using the Earth's natural satellite, the Moon, to reflect their signals to distant places. And there are a host of other modes, such as meteor scatter, tropo, and the odd sporadic-E opening where amateurs will explore distant terrestrial propagation on 2 meters. If you don't care that your signals are relayed, then the digital packet networks can carry messages all over the world from a two meter originating station, somewhat the way these groups are propagated on Usenet.

>2. Would it be wise to start out with a full coverage rig (160-10 meter, new
> or used) or something simpler. I'm willing and capable of trying my hand at

> building some of my equipment but don't know what the investment in test
> equipment would be(?).

Since you seem intent on operating in the traditional DX gaming arena,
a HF rig would be strongly advised. The best single piece of test equipment
for HF is a good quality commercial transceiver. If you decide to do some
building, and I hope you do, you'll find that commercial transceiver to be
the most valuable bit of test equipment you own. You'll likely have more
success at first using a commercial radio on the air than you would using
home built equipment of dubious performance. Get your operating skills up
with a known good radio before branching out into building your own equipment.
You'll face much less disappointment and frustration this way. You'll know
your failures are your fault rather than the equipment's fault.

>3. What about VHF/UHV operation with transverters? Are these still used?

Transverters are almost extinct. There are still some commercial ones
around, and a few HF transceivers set up to work with them, but they
are very much the exception rather than the rule today. VHF/UHF operation
in other than FM mode has become the province of the multimode transceiver.
However, a transverter is a good intermediate level building project. And
a well built transverter used with a high quality HF rig can offer very
good performance.

>4. What about 6 meter operation? I've noticed that several manufacturers are
> offering 160-10+6m equipment lately.

That's because Techs can use 6 meters, and Tech Plus can use 10 meters
as well. Since those two are the fastest growing segments of amateur radio,
the manufacturers have started supplying equipment for 6 meters. Six has
been a shunned band due to TVI concerns (next to TV channel 2), and due
to the currently low sunspot numbers, but the sheer numbers of Techs has
made it a selling point to include it on new commercial rigs. In a few years,
when the sunspots heat back up, 6 meters will be a much more interesting band
than it is now.

>5. What about o/p power? Does lower freqs neccessarily mean higher power
> requirements?

When operating HF near the MUF, even flea power stations will do well.
But as you go well below the MUF at the moment, D layer absorption will
make it necessary to use higher power. If you chase the MUF as it varies
up and down throughout the day, you can get by with only low power equipment.
If you want to force things, then more power is warranted. Typically 100
watts is a good power level, with under 10 watts sufficient near the MUF,
and occasionally 1.5 kW needed well below the MUF (especially when atmospheric
noise and QRM are high, like 75 meters at night in the summer).

VHF/UHF operation rarely requires high power since much of it
is line of sight. But for those times when you want to really
reach out, like moonbounce or forward troposcatter, a 1.5 kW
station will be warranted.

The unit is made for Radio Shack by Maxon. It is well built. There
are no expanded frequency mods available for it *by design*. It's
not a wideband scanner, can't be made into a wideband scanner, and
that's on purpose so that it doesn't suffer the ills of a wideband
scanner.

There are a number of license-free 900 MHz spread spectrum
modems out there, giving bit rates from 9600 baud to T-1 speeds,
although the faster that you go, the range does tend to suffer.

While the purchase and installation of such a system will be more
than getting a 56Kb line, the costs after that are free, other
than maintanence... though 25 miles is pushing it as far as SS
technology and <1 watt power are concerned (including interference
from other users in that band). In other words, you need a literal
line of sight path, and some very good antennas to make this
work at all.

This is done as a "Part 15" device, and you do not need any sort
of license for this at all.. in fact, the way that the amateur
rules about SS are currently written, it's not legal to use any
of the presently-available commercially made equipment under
a ham license. Go figure.

It's do-able, just not in everyone's case.

2728. Kenwood TS-530S alignment & woes...

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-03 19:56:12 UTC
From: ham@wam.umd.edu
Message-ID: <3j7s8s$llv@cville-srv.wam.umd.edu>
Source record: 251358

I have a Kenwood TS-530S that puts out a good, solid 80 watts
with 200 watts input power from 160 meters up through 15. On
12 meters, the max power I can get is about 90 watts, and
about 75 on 10m.

Yes, I know, I know, these numbers are actually pretty good.
6146B's put out less power on the high bands as they age. But
a curious fact:

I swapped in a brand new set of matched 6146W's and the situation
didn't change! I can't get ANY ALC deflection on 10 meters at
all! I can't use the ALC meter to tune the radio. And yes,
the ALC is working fine on all other bands (although a little
weak on 12 meters). Even with the radio in SG OFF mode (for
alignment), and peaking the "coil pack" and 10 meter drive coil,
I get ZERO meter deflection.

Any votes for the 12BY7A going soft on me? Like I said, I get
75 watts out (Ip maxes out at about 220 ma, while it goes up to
about 275 ma on all the other bands) but ZERO ALC deflection.

Anyone have any ideas? More than willing to listen, and

IN ANOTHER RELATED STORY:

Upon alignment of the radio, the first of the IF coils to align
is the "ANTENNA COIL 1.8 MHz." This is a powdered ferrite
cover, where the adjustment occurs when the cover screws down
over the core! It BROKE last night!$^%&!

The effect of turning this shell was minimal even when it WAS
whole. 30% of the cover piece is missing, but the radio still
aligns and receives fine. Should I go and get a new one? Is
it necessary?

I'M LOOKING FOR ANYONE WITH KNOWLEDGE OF THESE DILEMMAS TO
HELP ME DECIDE WHAT TO DO. Thanks!

>trick. Any suggestions on which ones to consider?

I suspect a *high* antenna is what you need, one that will clear
the obstruction that's blocking your signal at home but not 1 mile
down the road. Get a topo map, find the ridge, and figure out how
high an antenna will need to be at your house to clear the first
Fresnel zone. That'll fix you right up. Even a legal limit amplifier
and high gain antenna won't burn through the dirt and rock of the
blocking ridge, but a high antenna will give you line of sight so
your peanut whistle will be full quieting into the repeater.

Dave-

MFJ is a fairly small company, as I understand it. I've talked with their personnel at the Orlando Hamfest, and am convinced they are honest people. However, they do appear to have production problems.

I suspect they are all "in tune" with each other, regarding techniques for stalling customers! Your case may be just as you said, and the manager may have discovered newer orders being shipped ahead of older orders. On the other hand, your last call may have coincided with the first availability of the product you ordered.

I put-off purchase of the AEA Iso-Loop antenna a few years back, while waiting for the MFJ version. I later found that MFJ wasn't just "out of stock", but hadn't actually gone into production yet. The loop antenna had been in the MFJ catalog for almost a year, before it became available.

I just called Amateur Electronic Supply in Orlando. They do not have the MFJ-1798 there, but their computer listed some at their other stores.

Hey... Do you ever get jumped on while on the air from people thinking
that you're W1AW?

Anyway, I'm quite happy with the "W" in my callsign... On voice, many
people have commented on how I pronounce the "W" very "correctly". I'm
one of the few people that say "double-U" instead of "dub-ya". It's the
radio announcer in me showing itself! <grin>

Had a W in my first callsign, and didn't mind at all when my second
callsign came back with a W in it..

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 MARCH AND FORECAST FOR 04 MARCH - 06 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 91/36

GOES satellite data for 02 Mar
Daily Proton Fluence >1 MeV: 2.5E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.1E+09 (very high)
X-ray background: A9.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Mar 05 Mar 06 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Mar: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 02 Mar
Learmonth 5 3221 1111
Fredericksburg 5 20
Planetary 7 22

Observed Kp for 02 Mar: 3554 3422
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Mar 14 Unsettled
05 Mar 10 Quiet to unsettled
06 Mar 8 Quiet to unsettled
COMMENT: Activity is expected to increase again on 7 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

03 Mar normal fair-normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Mar normal normal fair
05 Mar normal normal fair
06 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
03 Mar -3 about 15% below predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 Mar 30 10 to 20% above predicted monthly values
05 Mar 30 10 to 20% above predicted monthly values
06 Mar 30 10 to 20% above predicted monthly values
COMMENT: MUFs at Townsville were 15% above predicted monthly values
during daylight hours yesterday. MUFs at Hobart were 20-30% depressed
for most of the day, with spread F observed during local night.

Well worth the sale price...Hell, it's well worth full price. This is a great
rig made by Maxon. The fact that is has no ability to receive modification
shouldn't scare you away, it should bring you into the store. This rig has
such a tight front end, you'll have the best image rejection of anything
I've yet seen. My wife uses one, while I use an IC24AT. The Rat Shack
404 is much better for intermod rejection

: deafness. (By the by, copying code visually *is* perfectly legal; Part 97
: says so. So is copying with a vibrating device. No excuse there...Can't
: hear the code? Copy by flashing light or vibrating transducer, then.)
: Can't write? Head copy, followed by, if you like, orally reading back
: what you've copied every few words or so--hell, it's even easier than
: that!...Can you head-copy enough to answer some easy questions about what
: you've copied in your head? Good! Then you're set. And you can even use
: the experience on the air! Mobility impairment? Stuck with an iron lung
: or something? Y'ot'to see some of the stories about folks who have done
: code before this waiver thingy.

: Mind you, if there is a really *legitimate* reason why someone can't copy
: above 5WPM, and I suppose there may be one, somewhere, OK sure fine, get
: a waiver. But for Chrissake, try it first... I do think that there are
: far too many of us who want the easiest way out of something, and because
: they can get it, they do. But in the end, where does it get you?
I have tried it. My disability affects the string reconation (sp?) areas
of my brain, making very hard, if not impossible to keep up with a string
of chars. I can get the first one, and then the 3rd and 5th (GTI?),
because my brain is trying to interpret what is heard/saw on the 1st, so
it misses the 2nd. Someone will call be, and I won't understand them at
first, and I'll say what?, and by then my brain will have deciphered what
then said. (If that doesn't make sense, sorry, but I've been awake for I
have no idea how long...)

: I'm amazed at some of the things that the FCC will let pass as a : qualifying
disability...

The question is this...Assuming that it is within the FCC regulations, what good would a 57k connection do when most of the packet community (at least around here) still hasn't yet discovered 9600? Sure, your connection would be extremely quick, but what about when you hit the bottleneck of <insert your favorite packet freq. here>? It's not a bad idea to introduce ISDN connections to packet, but I think it's years from becoming anywhere near mainstream.

Simply put...great idea, but it's a waste of time/resources, at least right now.

By the same token, however, one can order a pizza over their own phone in the
home and not have to pay commercial rates... If one isn't making a profit by
use of the phone line, why should one be forced to pay commercial rates? Last
I heard amateur repeaters weren't necessarily commercial ventures.

No more so than the control signals he's sending to the model aircraft.
You're reading more into the regulations than is there. Nothing to worry
about... it's a legitimate application.

>How does the FCC view using ATV in this manor and is there anyway he could
>do it that would make it conform to the rules + regs ??

It's really no problem at all. No special considerations, either. However,
the ATV transmitter must ID.

>ANY help would be extreamlly appricated.
>73s de Matt N2MDB

Matt, your problem may really be ADD, but I doubt it. The problem you describe is actually quite common, and results from attempting to learn the Code incorrectly. You're listening to the individual dots and dashes and trying to do a mental lookup table conversion. That will work for many people up to about 8 WPM, but not for everybody. In your case, it apparently won't even work at 5 WPM.

You need to learn the Code a different way. You must condition the wetware to respond reflexively to the entire sound of a character as a unit. You can do that since you can recognize entire English spoken words, and those are even more complex sound units. It's not necessary that you associate meaning with the sounds, only that you recognize them and reflexively copy them down.

Reflex copy only comes with drill. Try using a good drill program and copy automatically at the keyboard. Condition your fingers to automatically strike the correct key when you hear the sound unit of a letter. *Don't think about it*. Just do it. Your conscious mind is interfering with the copy process. You need to empty your mind, or occupy it with something else, while you copy so that it won't interfere with the process.

You have to learn to copy Code the way you learned to touch type. It can't be a conscious process. The body must just *do*. If after 6 weeks of drill you still don't have it, then you may need to look at other

options. If you really can't associate the sound units with letters, then you may need to mark the sounds down on paper and sight read them to answer the exam questions. Some VEs won't allow that, but the FCC examiners did and some VEs will, and it's a valid way of getting the information down on paper. It is the way Samuel Morse designed the Code to be used.

You have to get that 5 WPM before you qualify for a waiver. So you're just going to have to figure out a method that works for you to do so.

Ah, Jeff, you poor little dit head, you just don't get it do you? Not everyone has the facility you have to mindlessly become a modem. For some people it's a hell of a lot more work to get the Code down on paper than it is for you. Try being helpful instead of condescending. You might even want to talk to some cognitive psychologists at your university about the subject. Idiot savant talents like yours are not that common in the population.

>about $50 per month!)? Comments welcome...

Unfortunately, Doc, the FCC rules *do* allow business to be conducted
over amateur radio today. It's limited to *personal* business, such
as the proverbial ordering of a pizza, but it's there. If Heath is
soliciting rides to work, that certainly falls under the business
rule. Don't take this tack with the phone company or you will surely
be burned. (Note however that personal business on a residential line
is considered normal, else we'd have to pay commercial rates to order
a pizza.)

However, the phone company must comply with the tariffs set by the
State Public Service Commission. That's the direction you want to
take. Check with the PSC to see how the tariffs are structured.
The phone patch should be no different than a modem connection
as far as the tariffs are concerned. If residential rates are
allowed for computerists, then they'll have to allow residential
rates for the phone patch. This is the direction in which you
have to go. Work through the PSC to get the phone company to
obey their tariffs.

This may still not work, depending on how the tariffs are worded.
Residential rates may only be available to residences. If the
repeater isn't at a residence, you may be out of luck. If that's
the case, put a cot at the repeater site, get a post office address,
and claim it as a vacation residence. Then they'll *have* to give
it residential rates.

>I heard amateur repeaters weren't necessarily commercial ventures.
>Ken Harrison harrisok@sonoma.edu Ham: N6MHG

the problem being that to the phone company this wire is going to an
object that walks and talks and looks like a commercial duck. others
have crossed this bridge in his area - he should be asking them how
they pay for a phone line and what special rules apply to get a lower
cost phone line...

the phone company, of course, gets suspicious over stuff like this because
you could bet if it was easy, they'd have a lot of commercial accounts in
the next day wanting a break. so they're not predisposed to discriminate.

and since the content rules have been lifted somewhat, claiming 'non-
commercial" use isn't as strong as it once was.

David A. Webb (mudaw@uxa.ecn.bgu.edu) wrote:

: Again, if you take the regulations as literally as they can be
: read, it is illegal to use frequencies outside of the amateur band
: even if the biggest emergency in the world happend.
: The regulations do not say 'it is illegal', but they do say
: any amateur station may use any means of radiocommunication.....
: but an amateur station is defigned in the regulations as
: basically the equipment used for operating in the amateur
: service frequencies. This does not include police service
: frequencies. Therefor what can we conclude?

I'm confused. The regulations do say, "an amateur station may transmit the following types of two-way comminications: (b) Transmissions necessary to exchange messages with a station in another FCC-regulated servic while providing emergency comminications" (97.111a(1))

Of course you know that the rules also say that no provision of part 97 prevents the use of any means needed to get help in an emergency. (97.405)

If you're going by the "amateur stations are defined as transmitting on amateur frequencies," I don't see it. The definition of an amateur station is "a station in the amateur radio service consisting of apparatus necessary for carrying on radiocommunications." Nor is the definition of "amateur service" restricted as to frequency: the service is defined as a service for self-training, intercommunication, and technical investigation without financial interest. Furthermore, 97.1 talks about recognizing and enhancing the value of the amateur service during emergencies.

If there's any provision of the rules that says an amateur station must stay within amateur bands during a dire emergency that isn't "escaped out" by 97.111 and 97.405, I wish someone would point it out.

Robert Casey (wa2ise@netcom.com) wrote:

: Don't forget, in this debate, that a dis-incentive to upgrading to get
: on HF are restrictions on antennas. Like at apartment complexes and
: newer housing developments. You can usually "get away" with a VHF
: mag-mount on the air conditioner, or a twinlead J pole inside (I did
: both) and noone will bother you, but try doing a HF antenna. Landlords
: *will* bitch. You might get away with a wire dipole in the trees if
: you own a house in a "no antennas" development. But with this hassle,
: why upgrade if you can't really exercise your new frequencies?

In most cases, you can also get away with a small HF antenna, such as a small loop (ala Isoloop and MFJ, etc). These small antennas can be reasonably efficient, ranging from about 70% efficient on 20 meters to 90% or so on 10 meters. This, combined with the fact that the antenna is nearly unidirectional, means that it will be about an S unit weaker than a full size dipole at the same height. I have used them successfully on 20 meter CW, running QRP, as I always like to do if I am using indoor antennas.

There are also a number of other hidden antenna options, such as thin wires, disguised flagpoles, etc. You will definately NOT end up being a big gun on the band, but you will make plenty of contacts when the bands are open. The ARRL Antenna Book has a chapter on limited-space antennas, the "Low Profile" book has lots of tips for apartment dwellers and there are a number of related bibiography and information files available at the ftp site at oak.oakland.edu or by email from the ARRL Automated Electronic Mail Server, info@arrl.org.

Good luck!

[UUencoded program snipped]

I'm not going to flame you, but no doubt others will.

I'm not the net.police, but I do speak for the FAQs about this newsgroup.

Please DO NOT post programs to this newsgroup. There are LOTS of
anonymous FTP sites with directories catering to programs for amateur radio.

One, in particular, is the one I'm in charge of:

oak.oakland.edu:/pub/hamradio

If you want to distribute a free/shareware program, feel free to make the
announcement here, then let the readers (such as me) offer to archive
your program.

You can then announce that your program is available at
some.site.edu:/some/directory

Much nicer looking, and it:

1. Prevents flames from angry readers

2. Preserves net.bandwidth

3. Helps you make net.friends instead of net.enemies

(Ugh! Now I'll have to do this again for the next wave of newbies... :-(

2761. Out-of-band emergency calls (REPOST)

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-04 19:49:09 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9502047943.AA794346664@ccmail.anatcp.rockwell.com>
Source record: 251288

It seems that much of my original post did not make it through the system, so I am reposting.

On 28 Feb 1995 19:10:43 -0600,
David A. Webb <mudaw@uxa.ecn.bgu.edu> wrote:

[stuff deleted]

>The question "is it legal to TX on police band in an emergency?"
>is a bit more vague. Technically speaking, the wording in the CFR
>indicates it not legal, even in an emergency.

Huh? That's not what I read.

>[47 C.F.R. $97.403] reads "No provisions of these rules prevents
>the use by an amateur station of any means of radiocommunications
>at its disposal to provide essential communication needs in
>connection with immediate safety of human life and immediate
>protection of property when normal communication systems are not
>available."

". . . any means of radiocommunications at its disposal . . ."
Seems rather inclusive, dosn't it. If it is a means of
radiocommunications, and I can get to it, I can use it in the
case of a life thretening emergency when normal communication
systems are not available.

>Okay, but [47 C.F.R. $97.3] defines an amateur station as "A
>station in an amateur radio service consisting of the apparatus
>necessary for carrying on radiocommunications."
>
>Therefor, you can use any means of radiocommunications, as long as
>it is in the amateur radio service.

This is where David makes his mistake, thinking that because the
apparatus necessary for carrying on radiocommunications is being used
in the amature radio service, it is only capable of operating within the
frequencies assigned to that service. Note that the radio is in
the amature radio service by vertue of its use, not its capability.

It must be remembered however, that "normal" communication systems
must be concidered and found unavailable first. Also, there are
other statutes to cosider, interferance with a police officer,
for example. Even when all the tests have been met: A life thretening
emergency exists, there is no other means of communication available,
the communication does not interfere with emergency services, the
operator must be prepared to defend his or her actions, perhaps

in court. The operators equipment may be held in evidence until the issue is resolved.

What happened in San Diego was, IMHO, wrong. In that case, there was no hearing, there was only administrative intimidation. Even so, if a life is saved, and an HT is the cost, SO WHAT!

Now for my own "lesson learned" soapbox speach:

I generally carry an HT capable of transmitting on the local police frequencies. I have all the frequencies programmed in so I can listen, I have the PLs set so I can use CTCSS filtering. Now, I also have each channel set as an odd split, so that if I accedently transmit, it will be on a simplex ham frequency. Why did I do this? While working an event with the local PD, I acked a call from net control, and heard my transmission coming from the patrol car next to me, you see, I had the PTT set on the wrong side of the HT. Oops! Accedents can happen to the best of hams, so I made it impossable for me to have the same accedent again. I urge anyone who programs emergency frequencies in their radios to do the same.

>Sorry if this sounds like a new ham posting; it is!

>KB
>kbnmatt@aol.com

Welcome KB (and Matt I guess :-)). Their are lots of open repeaters in
your area. You may want to check with the TORA folks if the Rose Parade
interests you. Also the two Mt. Dissapointment machines are good,
147.270 + and 145.300 -. Look for the "Repeater Location Guide"
by Kevin Karamanos, WD6DIH and Karl Pagel, N6BVU at your favorite ham
store. It's a good So. Cal referance.

I have just made two trips into DV and I don't know of any repeater
coverage down their, but I recommend monitoring national simplex,
146.520. I've made a few "on the road" contacts that way, and if
a ham is in trouble in the middle of nowhere, that is a likely place
for he or she to be calling.

Hi! Tri City Christian School in Vista California (San Diego county) is approved for talking to the STS-67 shuttle (launched 3/1/95) via SAREX. This has sparked A LOT of interest on part of junior and senior high students in getting licensed!

We are planning a HAM STATION at the school, and would LOVE any usable donations of gear: hf, vhf, uhf, packet, antennas, tnc, etc etc. Donations are TAX DEDUCTIBLE as we are a non-profit.

Please contact me ... 73

Does anybody know an email address or another contact for this Mac software? I sent email to switzerland.
Moritz (HB9BLZ) can act as a message forwarder. It got returned/bounced :-(

Also anybody have any experiance with using it...comments?

<MacContest 4.0>
The ultimate contest logging program for the Macintosh (System 7 proof). Covers CW/SSB/RTTY modes and all bands from 1.8 MHz to 5.7 GHz. Allows real-time or post contest logging for a wide variety of contests (30 contest include, new ones can be added). Checks for dupes, figures scores instantly. Offers various printouts (sorts per band, alpabetically, labels etc.) Interfaces to TNCs (KAM, PK-232) for CW, RTTY and packet modes. Built in terminal mode and packet DXcluster interface. Interface to Kenwood transceivers for automatic band/mode logging. MacinTalk voice output for real-time logging as well as to ease post-contest entry. Option to capture log in realtime to printer. Option to simultaneously create a save copy of the log to a different file/drive. Timetable showing actual grayline on a world map.
MacContest is free but must be personalized to each user (otherwis it's limited to 50 contacts). To get a copy send a 3.5" diskette and a SASE to Gerald Eberle, HB9CEY, PO Box 13, CH-4417 Ziefen, Switzerland.
Moritz (HB9BLZ) can act as a message forwarder for Gerald. Moritz' e-mail address is: gysslerm@saturn.kau.roche.com

SB NEWSLIN @ ALLBBS $NLIN.916
Amateur Radio Newsline #916 04 Mar 1995

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Netowrk. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in it's entirety, not be subject to any further editing or commentary, and that full credit given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in it's entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or digital forms of Amateur Radio, it is recommended that the closed circut advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

The following is a QST

SAREX gets ready to contact amateurs around the world while
Amsat announces the frequencies for Phase 3D.
These stories and an update on the condition of ARRL President
George Wilson, W4OYI come your way right now!

(*****
SAREX - STS-67

STS-67 is the next space shuttle flight to carry SAREX, the
shuttle amateur radio experiment and it's a mission that carries
more scheduled ham radio contacts than any of the 16 SAREX
missions that have gone before.

It's the longest space shuttle flight ever scheduled, 16 days,
and six of the astronauts on board are licensed ham radio
operators. One of them, WA4SIR, Ron Parise is flying on his
second mission!
The space ship Endeavour flies more than 200 miles above the
earth for this flight. Its primary payload will be ASTRO 2 for
measuring planets, stars and galaxies in space. There are 26
scheduled school contacts, and that's another record. Only 29
schools made contact for the whole of last year! Most of the
schools are stateside but the list also includes South Africa,
Bangalore, India, and Cobram, Australia.
The crew also plans some random contacts with earth bound
hams, both voice and packet. Listen for them on 145.55 Mhz.
That's the downlink frequency for voice or packet. The
astronauts will NOT listen on that frequency however. Call them
on voice on 144.91, 144.93, 144.95, 144.97 and 144.99 Mhz. Packet
uplink is 144.99. For information on when and where to listen we
suggest you check transmissions from the Goddard Space Flight
Center on 3.86 Mhz, 7.185 Mhz, or 14.290 Mhz. You'll not only get
in-flight bulletins but all the air to ground conversations as
well. Good luck in trying to make contact.
We also have another SAREX report on a changing of the guard
in Houston. The SAREX Principal Investigator for the last ten
years has been Lou McFadin, W5DID. Lou's leaving NASA to go to
work for AMSAT, putting together the Phase 3D Satellite. His
place at Mission Control in Houston will be taken by Matt
Bordelon, KC5BTL. Matt's very well qualified. He's a training
officer teaching astronauts how to handle SAREX. Now he'll an
active participant, one of the four member SAREX Working Group
that runs the program for the American Radio Relay League and
AMSAT.

Our best wishes to Lou McFadin, W5DID on his career move to
the AMSAT Phase 3D project. We will have more on STS-67 and

SAREX next week.

(*****
AMSAT PICKS FREQUENCIES FOR PHASE 3D SATELLITE

AMSAT has selected final frequencies for its advanced Phase 3D satellite, due to launch in 1996. The selections, approved by Phase 3D Project Leader Dr. Karl Meinzer, DJ4ZC, were carefully chosen to minimize mutual interference with other amateur satellites and were coordinated with IARU band plans.
According to AMSAT Executive Vice President Keith Baker, KB1SF, the bands to be used by the upcoming satellite include 21 and 28 MHz on HF with 145 MHz on VHF and 436, 1269, 2400, 5668, 10451, and 24048 MHz on UHF.

(*****
ZC6B UPDATE

An ongoing ham radio DX operation using a defunct call sign from a land that technically does not exist is still grabbing the attention of DXers world wide. The call sign is ZC6B and the place is Palestine. Both exist only in the minds of the people who remember the days following World War 2.

Another update on the controversial ham radio operation from Palestine. Dr. Sami Terazi, signing ZC6B continues to be active most days on 14.243 MHz at 14:00 UTC. Dr. Tarazi who claims to be operating from Gaza says that he will soon be installing a 3 element beam. He has also states that he has not received any mail from either the USA or Europe because it takes a month or more to receive any.
ZC6A claims that he has mailed some QSL cards direct by using the callbook and notes that cards for him from the United States cards can now be sent to Dr. Sami Tarazi, c/o 7162 E. Kendall Drive, E. Syracuse, NY 13057. The original QSL route was Dr. Sami Tarazi, Box 1008, Gaza, Palestine via Israel.
Meanwhile, there are other rumors floating around stating a couple of DXpeditions will take place in March by some JA, European and stateside operators.

Also a reminder that the ZC6 prefix was deleted from the DXCC Countries List as of July 1st of 1968. The allocation list of international call signs now shows that the prefix for ZC6 is allocated to the United Kingdom of Great Britain and Northern Ireland and not to Gaza or Palestine.

(*****
MURDER

The search for a Georgia amateur radio operator's missing granddaughter is over. You may recall an earlier Newsline report about Chanty Shiverdecker. She's the 15 year old Alexander City, Alabama, high school student who disappeared December 9th, 1994.

On February 24th, nearly 11 weeks after she was reported missing, Chanty's body was found in a ditch about 8 miles from home. Police have no suspects in Chanty's murder.
Chanty Shiverdecker was the granddaughter of Milton Landin, WB1CRP, of Forsythe, Georgia.

(*****
GEORGE WILSON UPDATE

ARRL President George Wilson, W4OYI, who suffered a stroke on February 11th is showing considerable improvement. As get well wishes pour in, so do questions pertaining to exactly what happened to the very popular League president. ARRL Executive Vice President Dave Sumner, K1ZZ says that it was a fairly serious stroke.

"What occurred is a, what is called an intercerebral hemorrhage on the right side of his brain. In other words, there was bleeding tissue deep inside the brain. This has affected, to some extent his control of the left side of his body. But it appears whatever permanent damage that may have been done is physical to the left side of his body. He may have some paralysis there that will require some rehabilitation. Of course for someone like George, his mind is, as sharp as it is, that's the thing you worry about the most. The doctors are quite optimistic that there's been no permanent damage there."

Dave adds that George's wife Marian and their two children deeply appreciate the expressions of support that have come from radio amateurs throughout the world. Get well cards may be sent to President Wilson in care of ARRL Headquarters, 225 Main Street, Newington, CT 06111. You can also post your get well wishes to George on the America Online Ham Radio BBS from where they will be forwarded to W4OYI.

(*****
MO. LICENSE PLATE FEES

Some good news for hams living in Missouri. ARRL Midwest Division Director Lew Gordon, K4VX reports that through the efforts of Ed Schneider, N0IUO and others, Representative Hand of the Missouri House of Representatives has introduced a bill which would reduce the fee for personalized Amateur call plates. This, to an initial fee of only $15 with an annual renewal fee of $3. All Missouri Amateurs are urged to contact their local state representative and solicit support for this bill. Missouri is one of very few states that places Amateur Radio license plates in the same category as vanity plates.

(*****
TEENAGE HACKER

Another young hacker is in the news. GM4NRB reports via a worldwide packet radio posting that a British teenager who allegedly infiltrated into sensitive U.S. government computers is in jail.
The youth who may have been a UK ham is said to have illegally monitored top secret communications over the North Korean nuclear crisis last spring.
According to quotes from the London Daily Independent newspaper, the 16 year old boy tapped into several defense computers for seven months during the crisis. After reading the messages the teen reportedly posted them on to the Internet where a British computer buff who read them told the Independent they contained information about missile firing sites in North Korea and field intelligence.
The young computer criminal, nicknamed "Datastream" by other Internet users, was finally caught by investigators after he left his terminal on-line to a U.S. defense computer overnight.
British police arrested the boy in July. In a statement to the paper, the U.S. Air Force Office of Special Investigations acknowledged the hacker could have accessed and read the top secret Korean files.

(*****
DIGITAL PLANS

The 14th annual ARRL Digital Communications Conference will be held September 8th - 10th at the LaQuinta Conference Center in Arlington, Texas, near Dallas.
The ARRL Digital Communications Conference is an international forum for radio amateurs and experts in digital communication, networking, and related technologies, at which they can meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees can exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.
Anyone interested in digital communication is invited to submit a paper for publication in the Conference Proceedings. Attendance at the conference is not required for publication. Papers are due by July 21st, 1995, and should be submitted to Maty Weinberg, at ARRL Headquarters.

(*****
NASA PRESS RELEASES

NASA press releases and other information are available automatically by sending an Internet electronic mail message to domo@hq.nasa.gov. In the body of the message users should type the words subscribe press-release. If you did it right, the system will reply with a confirmation via E-mail of each subscription. A second automatic message will include additional information on the service. Questions should be directed to NASA at area code (202) 358-4043.

(*****
HISTORICAL ASSISTANCE

The Antique Wireless Association is building a replica of the famous 1BCG transmitter used in the 1921 ARRL Transatlantic Tests. This was the first station to send a complete message across the Atlantic. 1BCG was operated from East Greenwich, Connecticut, by members of the pioneering Radio Club of America. The association says that it knows of only one licensed amateur other than 1BCG himself who still active who was heard by Paul Godley in England. That's Jim Russell, now W8BU, then 8BU. The association would like to hear from other amateurs who might have heard 1BCG during the tests. If you can help, contact AWA Curator Bruce Kelley, W2ICE, 59 Main Street, Bloomfield, New York 14469. The Antique Wireless Association hopes to have the transmitter operating sometime this fall. It also hopes its operators are able to work some of the hams who participated in the 1921 tests.

(*****
ZS5AKV HONORED

Southern Africa Radio League President Hans van de Groenendaal ZS5AKV has been awarded an honorary Master of Engineering degree from the University of Stellenbosch. The graduation ceremony was held at the University last December 15th. In his speech, the Rector, Prof. A. H. van Wyk, paid tribute to Hans for his contribution to Amateur Radio and to the Amateur Radio Satellite Service.

(*****
DX

In DX look for Zimbabwe on the WARC bands. Bill Taylor, Z21CS, can be found most days on 18.124 MHz around 17:15z. The interesting thing when QSLing to Bill is he does not want any IRCs or green stamps. Rather, he would like a packet of flower seeds for his wife! QSL to: Bill Taylor, Box 264, Kwekwe, Zimbabwe.

(*****
TWIAR CELEBRATES #100

Finally, a belated Happy Birthday to our good friends at This Week in Amateur Radio. The satellite-delivered ham radio news and information service celebrated its 2nd Anniversary on Saturday, February 25th.
This Week in Amateur Radio was originally known as Amateur Radio Weekly and carried on the Spacenet III satellite from southern California. In early 1993, production was moved to central New York and the show was renamed "This Week in Amateur Radio". In March of that year it was taken over by the current production group and went on the air with a new, expanded format from Albany.
The show went on a four-week hiatus during December 1993

during its transition to Galaxy III and the new "Omega Radio Network". Omega is a service provider that features communications hobby programming. "Omega" and "This Week" moved to AT&T's Telstar 302 earlier this month.
This Week In Amateur Radio is produced by Community Video Associates and is heard on nearly a 100 amateur repeaters throughout the United States and Canada.
Our congratulations to Steven Anderman, WA3RKB and George Bowen, N2LQS and the rest of the gang at This Week in Amateur Radio on edition number 100 and for making their own dream of service to the ham radio community, come true!

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at Post Office Box 660937 in Arcadia, California 91066.

2769. On-Line Callbook with search engine???

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-04 23:30:02 UTC
From: ronklein@ix.netcom.com
Message-ID: <3jat5q$b09@ixnews4.ix.netcom.com>
Source record: 251389

A few weeks ago, I stumbled across (on the WWW) a marvelous search engine for callbook queries. It allows search by location, name, etc.

Well, good(??) ole NetCruiser crashed, and I lost that URL address in the process. I have not been able to locate it again.

Could someone point me to the place on the web where such searches of the callbook are possible? I want to be able to search on more than just calls.

Thanks.

73,

Well....I have been thinking along these lines: Sooner or later the phone company is going to have to charge for the quantity of data sent over the wire. What difference does it make if the user makes a profit? Or what his good intentions are? Even if they charge by the minute, then someone figures out how to send a years worth of data in a minute, now the company is out of business for a year as far as that customer is concerned. I think they need to charge for information sent. If the customer is a blind ham and needs some help, then 50 guys can chip in 12 bucks a year. The 50 guys can get the 12 bucks out of their dividends from their stock in the phone company.

2772. Re: FT-530 high-gain antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-05 01:48:43 UTC
From: pgsperseng@aol.com
Message-ID: <3jb59r$9p1@newsbf02.news.aol.com>
Source record: 251302

:>I've got an FT-530 but can't work the local repeater from my home; a
mile
:>down the road it works fine. I suspect a high-gain antenna might do the
:>trick. Any suggestions on which ones to consider?

:I suspect a *high* antenna is what you need, one that will clear;
:the obstruction that's blocking your signal at home but not 1 mile
:down the road. Get a topo map, find the ridge, and figure out how
:high an antenna will need to be at your house to clear the first
:Fresnel zone. That'll fix you right up. Even a legal limit amplifier
:and high gain antenna won't burn through the dirt and rock of the
:blocking ridge, but a high antenna will give you line of sight so
:your peanut whistle will be full quieting into the repeater.

Original poster (AA1MI) responds:
Well, if it weren't for the fact that I'm on the NH seacoast, which is
very flat and with almost no multistory buildings around, I might be
tempted to try that trick. But I'm not sure how much it'll buy me.

2773. The WB3FFV Amateur Radio INTERNET BBS..

+-------------------------------------------------------------------------------+
HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to most Internet services such as Email, FTP, TELNET,
Gopher, WWW, Callsign Lookup, Etc... Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

410-661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

410-661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - wb3ffv1.sed.csc.com (20.2.1.80)

WWW - http://wb3ffv1.sed.csc.com/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2
and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!! (5 phone lines)

I attempt to keep the latest and greatest HAM software on-line, and encourage
all to upload anything new that they come up with, as it is of benefit to all.
Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
```

F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my files listing into your uucppublic directory.

If you want to access the BBS via Telnet all you have to do is TELNET to wb3ffv1.sed.csc.com, and login is 'bbs' with no password required. To use anonymous FTP just ftp to wb3ffv1.sed.csc.com and login as 'anonymous'. This system is currently attached to the Internet via a dialup SLIP link, and should generally be available 24hrs, but at times the modem will drop the line. Also since this isn't the fastest link, I will be limiting the maximum number of anonymous sessions for the moment.

If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

The below is from a recent "Digest" of Info-Hams...
>Seriously, 1 to 2 weeks of 15-minute
daily study will get you easily up
>to 5wpm so you can get HF privileges.
Then you can conduct your own
>propagation experiments.

Ah, YYYY, you poor little dit head, you
just don't get it do you? Not
everyone has the facility you have to
mindlessly become a modem. For
some people it's a hell of a lot more
work to get the Code down on
paper than it is for you. Try being
helpful instead of condescending.
You might even want to talk to some
cognitive psychologists at your
university about the subject. Idiot
savant talents like yours are
not that common in the population.

XXXX

Unfortunately, these things are getting to be really too common. I know
it's hard to read inflection from a keyboard, but here was someone really
just trying to help and getting bashed for it.

I know about code -- I wanted to be a ham for twenty years before I decided
to buckle down and learn CODE because it was a requirement. Once I took that
attitude, I learned 5 WPM in 2 weeks and passed 13 WPM 2 weeks later. Try
it and see -- that's all that was being said.

2779. Sorry, some people can't learn code by being beeped at.

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-05 04:34:05 UTC
From: gsmlrn@gsm001.mendelson.com
Message-ID: <1995Mar5.043405.14678@gsm001.mendelson.com>
Source record: 251411

Sorry guys, while most people can learn code by being beeped at, some
cannot. I tried for almost 30 years to learn code by many methods,
including:

Listening to w1aw.
Listening to QSO's.
Memorizing the letters, etc.
Hypnosis tapes.
Practicing sending (including taking a practice set on the train to work).
High speed tapes (ala KB6MT)
Low speed tapes (ala arrl, gordon west, etc).
Computer programs (several).

Finaly I found a course called "Code Quick". This course uses a different
method of teaching you to recognize code. I received the course mid April,
and passed the 5 wpm in July and the 13wpm in October.

Using code quick taught me the code, but it did not make me a instant
code copier. I was able to pass the 13 wpm test only with lots
of hard work.

I would highly recommend the course to anyone who wants to learn code.

Code quick is a tape package. There is also a companion program
called "Code Quick Plus+", but it adds to, not replaces the tapes.
It can be had from:

Wheeler Applied Research

A friend of mine (WA2TQY) just got the Radio Shack General Coverage
discone antenna to use with his scanner. His son (N1RRD) got a hold of it
and hooked it up to his 530 and was having a blast with it. The antenna
is model 20-013 and is only about $60.

A.N.A.R.T.S. News Bulletin 848 5th March 1995

Well, those of you from NSW, and visitors from other states,
who attended the Central Coast Field day last weekend -- how
did you enjoy it? The quotes I have heard for attendance
ranged from 2200 to 2500 -- no doubt we shall hear from the
Central Coast Club in due course as to the real attendance.

I must congratulate the club on the manner in which it ran
this year's Field Day. After the traffic problems of last
year, it was extremely well organised with traffic diverted to
a side entrance of the racecourse, keeping the centre of the
town free from a traffic jam. Inside the course all was run
well also, with security guards in the Disposals hall to
prevent pilfering; with good results, I hope. I was doing a
video report of the field day and almost didn't get my camera
out of the hall -- should have had a sticker on it, I suppose.

All in all, it seemed to go like clockwork, except personally,
I think it should be a dry occasion but I suppose the catering
suppliers must call the tune there. There are so many who
drive by necessity that this should be considered for next
time. All those in the flea market come under that umbrella,
as do those who put items in the Disposals, and, of course,
the buyers. -- And it was a hot day ...

Congratulations again to the Central Coast Amateur Radio Club,
and we'll see you there again next year.

IPS WEEKLY REPORT
---
24 FEBRUARY - 02 MARCH

DATE OF ISSUE: 3 MARCH 1995

INDICES:

DATE 24 25 26 27 28 01 02
10CM 83 83 86 88 91 90 90
A 2 1 11 20 22 25 (22 ESTIMATED)

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET ON 24TH TO
25TH FEBRUARY; QUIET TO UNSETTLED ON 26TH, INCREASING TO
UNSETTLED WITH SHORT ACTIVE LEVELS ON 27TH-28TH WITH MINOR
STORM LEVELS 1800 TO 2100UT ON 28TH. THE FIELD WAS AT ACTIVE
TO MINOR STORM LEVELS ON 1ST MARCH, THEN UNSETTLED TO ACTIVE
ON 2ND.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE 15 TO 20
PER CENT ABOVE PREDICTED MONTHLY VALUES ON 24TH TO 25TH
FEBRUARY, 20 TO 50 PER CENT ENHANCED MOST OF 26TH, DECREASING
TO PREDICTED MONTHLY VALUES 27TH TO 28TH, WITH A SHORT
ENHANCED PERIOD TO 40 PER CENT. FREQUENCIES WERE AGAIN
ENHANCED TO 30 PER CENT ON 1ST MARCH; THEN 10 TO 30 PER CENT
BELOW PREDICTED MONTHLY VALUES ON 2ND. SPORADIC E WAS REPORTED
ON 26TH, 27TH AND 28TH FEBRUARY.

FORECAST (03 MARCH - 09 MARCH)

SOLAR: VERY LOW.

GEOMAGNETIC: UNSETTLED TO ACTIVE 3 MARCH, ACTIVE 7 MARCH,
OTHERWISE QUIET TO UNSETTLED.

IONOSPHERIC: DEPRESSED 15 PER CENT ON 3 MARCH, THEN MOSTLY
NEAR PREDICTED MONTHLY VALUES, POSSIBLE DEGRADED
COMMS ON 8 MARCH.

>
>The AEA Hot Rod is the best I've used. It makes a huge difference.

The Hot Rod (HR-1) is a good antenna. You might also try the
Anli RD8H which is a good slim type rubber duck.

I received my FT-530 yesterday from Yaesu and after the battery was
charged I spoke to some folks through a repeater about 20 miles away
and from inside a building. I was impressed! Oh, I used the antenna
that came with the radio.

I would suggest also that you consider the receiver at the repeater
site. I had a hard time hitting this same repeater with a 50 watt
mobile just a few months ago...but it seems the repeater techs did a
great job...cuz hitting it with a 2 watt HT from inside a metal roofed
building sure made an impression on me.

If one cannot hit a repeater from a mile up the street I'd say that there
is a problem at the repeater site or there is something wrong with the
radio.

Jez putting in my two cents. Not saying anything against the suggestion
to use the HR-1 cuz it is a good antenna...but like any telescopic antenna
it can be easily broken...for a rubber duck type though the ANLI antennas
are a pretty good choice...the RD8H and even better is the AL-800 (not to
be confused with the Ameritron amplifier) which works even better than the
RD8H.

>
>I'm confused. The regulations do say, "an amateur station may
>transmit the following types of two-way comminications: (b)
>Transmissions necessary to exchange messages with a station in another
>FCC-regulated servic while providing emergency comminications"
>(97.111a(1))

Yes, this allows us to communicate with, for example, Coast Guard
stations that come up in the amateur bands to respond to a ship
in distress call on the amateur bands. It doesn't necessarily
authorize us to come up on a Coast Guard frequency. That wouldn't
be Part 97 operation, and Part 97 regulations would not apply.

>Of course you know that the rules also say that no provision of part
>97 prevents the use of any means needed to get help in an emergency.
>(97.405)

Yes. It waives any Part 97 penalties for such activity. It does not
authorize activities contrary to other parts of the rules, or
contrary to other laws that may apply. Amateurs are interpreting
this rule section incorrectly when they assume it means a pro-active
authorization to operate anywhere in an emergency. It only waives
Part 97 penalties for operations that would otherwise be violations
under Part 97, such as running excessive power for example.

>If there's any provision of the rules that says an amateur station
>must stay within amateur bands during a dire emergency that isn't
>"escaped out" by 97.111 and 97.405, I wish someone would point it out.

As noted above, Part 97 regulations only apply to Part 97 operations.
If you aren't operating under Part 97, then Part 97 rules don't apply.
Once you move off of Part 97 authorized frequencies, you are no longer
operating under Part 97, and Part 97 rules do not apply. If you move
into Part 95 spectrum, or Part 70 spectrum, then you have to comply

with the rules of those Parts, including using Type Accepted equipment
for those services.

97.215 deals specifically with RC model telecommand operation.

>You're reading more into the regulations than is there. Nothing to worry
>about... it's a legitimate application.
>
>>How does the FCC view using ATV in this manor and is there anyway he could
>>do it that would make it conform to the rules + regs ??
>
>It's really no problem at all. No special considerations, either. However,
>the ATV transmitter must ID.

This is classed as Auxillary operation under the rules. 97.201(e)
specifically authorizes one way transmissions. This is a special
case of telemetry operation where the transmitter is operating only
as part of a closed system. The ATV transmitter must be under positive
ground control, and must operate in spectrum authorized for auxillary
operations, not a problem since ATV can only be done on frequencies
authorized for auxillary operation.

>
>Excepting remote controlled devices on certain segments of the 6m band.
>By the way, is remote control or telemetry permitted on any other
>amateur bands?

Yes, anywhere that Auxillary operation is permitted.

>>- If you are receiving signals in return, they must be from licenced
>> amateurs for that band (ie. packet)
>
>Who's sending signals back to you when you're using a repeater's autopatch
>to call a non-ham? Hmmmm. Packet/internet autopatches????

The repeater. It is an amateur radio station handling third party traffic under the authority of the control operator. When handling third party traffic, a repeater may not be operated under automatic control.

>>- Only conducting 5% business is like being a 'little bit pregnant'
>
>Agreed.

Ditto.

>>- The UHF link is being used to evade ISDN phone line charges.
>
>I don't understand this illegality of not being able to use a radio
>service to avoid paying for phone service.
>
>All autopatches can be construed to be 'evading' cellular service in
>areas where cellular service exists.

Yes. In fact 97.113, Prohibited transmissions says "No station shall transmit communications as an alternative to other authorized radio services". The rules no longer maintain a prohibition against competing with *wireline* services, but there is a prohibition against competing with other *radio* services. [Third party contacts are allowed under limited conditions when the content is "remarks of a technical nature relating to tests and remarks of a personal character for which, by reasons of their unimportance, recourse to public telecommunications

service is not justified."]

>Heck, you might as well kill off all land mobile radio as well on
>the basis of it's evading phone line charges (cellular or otherwise).

No, you can't, because land mobile is not a Part 97 service, and
Part 97 rules do not apply to it.

>What if you connected a computer (non-TNC) type modem to your radio
>and log into your internet account through the autopatch? How is
>this construed to be different from the UHF internet link mentioned
>by the original poster?

It's not different, both would be illegal if there is business
content. Both are third party transactions and must obey third
party rules.

2789. Help: STS-67 W5RR Packet

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-05 11:29:43 UTC
From: Doug Freeman <dougfree@onramp.net>
Message-ID: <3jc7b7$dui@news.onramp.net>
Source record: 251416

I am new to packet radio and for what ever reason my ability to figure
out the manual for the MFJ-1278B controller is getting me nowhere.
So far I have been doing ok on normal packet connections but I have
some questions about the Shuttle. I am using 145.55UP and 144.49dn
frequences.

My questions are

How do I setup for automatic operation?
Do I use beacon mode and what text?
Should I turn Digipeat Off?

In general besides the controller set up what are the proper
procedures? I did receive their packet dn information last night
so I would really like to see if my new antenna and only 50w can
make it up.

Thanks for you help,
Doug Freeman

Source record: 251183

In a message dated 02-26-95, abraun@alb.med.itc.com said to All:

abraun>COM 1 /IRQ 4 = mouse (mouse CANNOT SHARE AN IRQ WITH ANYTHING ELSE!)
abraun>COM 2 /IRQ 3 = TNC (actually it's outboard rather than internal but this
abraun> shouldn't matter)
abraun>COM 3 is disabled
abraun>COM 4 /IRQ 3 = modem - for a 14.4 or 28.8 modem you should have a 16550
abraun> UART on whatever port you're using for the modem
abraun>IRQ 2 = DVP board
abraun>IRQ 5 = sound blaster

abraun>This setup works fine under both DOS and Windows. I have some problems
abraun>with it under OS/2 however, since I'd like to be able to run the TNC and
abraun>modem at the same time and that isn't possible without using a different
abraun>IRQ, and OS/2 (unlike DOS/Windows) requires the use of IRQ 7 for
abraun>printing.^^^
^^^^^^^

This is no longer true with the "Warp" release of OS/2. My setup;

IRQ USE
4 Com1, mouse
3 Com2, external 14.4 modem
3 Com3, MFJ-1278 TNC
5 Com4, PK-232 TNC
7 Soundblaster-16

This arrangement works well. Of course I can't use the MFJ TNC and the
landline modem simultaneously, because of the IRQ conflict. And yes;
I can print from LPT1 just fine.

2794. Pacemaker

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-05 15:24:14 UTC
From: gfoley@freenet.columbus.oh.us
Message-ID: <3jcl2u$gmf@acme.freenet.columbus.oh.us>
Source record: 251423

My doctors have recommended that I accept a pacemaker. The proposal
only was made Mar.4, and I will arrange for the procedure tomorrow.
Mar.6. I have no information on what make or model of pacemaker
will be offered.
My present operating situation is 2 meter packet or fm voice, 25 watts
to a 1/4 wave antenna about 5 feet from my operating position, and
10 through 40 meters, various modes, 100 watts PEP to an R7 antenna
with the base about 20 feet from the operating position (brick wall, etc.
in between).
If you have any reliable advice to give as to the possibility that
a current model pacemaker is likely to misbehave due to RF under these
circumstances, or whether various makes or models of pacemakers are
more or less liable to such interference, it will be very helpful
to me.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

re: NEW HAM BBS dedicated to amateur radio !!!!

There is a NEW DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and tnc/modem door soon !!
qsl route database,clubs,newsletters,bulletins and more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.01 software..
easy to log in and no FEE's it's FREE !

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.
INTERNET E-MAIL ADDRESS:> kb6axk@netcom.com

Dick,

I think TAPR had some reference to the IC-22U in one the there new letters.
Also they publish a newslatter about high speed packet which has some tried modifications.
In any case you will need to go directly to the varactor for transmit and attach
receive to the detector.

At one time you could not use land Mobile radio to evade Long Distance
charges. I once knew of one business where the owner had setup two Land Mobile Bases,
they were some 80 miles apart. Yes he was running 100 watts on 150 foot
towers. Also the stations were legally licensed. Where he got into trouble
was when he was observed using these stations for base to base operations.
Not base to mobile. Not sure just what rule got him these days, but he had to
dismantle one of the bases. His business was a small family grocery store.
They were chatting about the daily business receipts and ordering goods. The telephone
Long distance carriers had this type of communication tied up. I would guess it was
like going thru a gas station to avoid the traffic signal.

2799. 420mhz and ATV

Newsgroup: rec.radio.amateur.misc

From: jmmorrison@aol.com
Message-ID: <3jctms$isi@newsbf02.news.aol.com>
Source record: 251314

Is 420mhz-430mhz reserved strictly for ATV or can it be used for low power simplex comms also?

Thanks,
John M Morrison, Detroit, MI

P.S. In Metro Detroit, 420-430mhz can't be used at all for amateur radio but I was just wondering about most areas of the country.

Kim,

I seem to remember something to the effect that an FCC-declared
emergency can have the effect of DIS-allowing amateurs the use of some
or all of any currently authorized radio spectrum. When necessary (when
it's to the benefit of the govenment), selected stations (likely RACES
stations at first, then maybe ARES stations) may be authorized the use of
specific frequencies for specific purposes until the emergency order is
suspended.

This is what you said, right?

>(and your radio) are not authorized to broadcast on.
>So...how long will you be pondering this dilemma while you or your
>friend/spouse/victim bleeds to death?

Hi Andy,
My point was that the law says to make sure no other means are
available. Surely you must do what you have to but if there *was*
an amateur repeater available or a pay phone across the street, then
don't whine if you get your HT yanked.

To be within the law (``...when normal communication systems are
not available'') here's your checklist:

- amateur rptr
- simplex channel with activity
- telephone (including cell and pay)
- cb radio
- signal mirror for signaling aircraft (heehee)
- _____________ (fill in the blank)

Now don't get mad at me. Get mad at the sheriff/fcc/judge/whomever
who asks you to give up your HT for xmt'g out-of-band.

I guess the HF folks should modify their xcvrs to enable them to QSO
with the Marine Corps/Army/Air Force/Coast Guard/Navy just in case
of an emergency. (``Air Force One this is NH6IL...'')

Heehee from Hawaii,
Jeff NH6IL

>critically hurt.

Hi Dave,
And would you have dialed 911 through an amateur repeater or
immediately QSY'd to the public safety channels?

I think it's our responsibility to know the rptr freqs for the
areas we travel through - that would make this entire topic moot.

Anyone care to guess what percentage of the U.S. is *not* covered
by at least one amateur rptr?

Jeff NH6IL

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 MARCH AND FORECAST FOR 06 MARCH - 08 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 04 Mar
Daily Proton Fluence >1 MeV: 1.5E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 7.3E+08 (high)
X-ray background: B1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Mar 07 Mar 08 Mar
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Mar: 84/26

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 04 Mar
Learmonth 11 2223 3332
Fredericksburg 19 14
Planetary 18 18

Observed Kp for 04 Mar: 2223 4336
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Mar 12 Unsettled
07 Mar 25 Active to minor storm
08 Mar 12 Unsettled
COMMENT: Active-minor storm levels expected on 7 March, and also
during interval 10-13 March.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Mar normal poor-fair poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Mar normal normal fair
07 Mar fair poor poor
08 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
05 Mar -29 10 to 30% below predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
06 Mar 15 Near predicted monthly values
07 Mar 15 Near predicted monthly values
08 Mar -10 About 15% below predicted monthly values
COMMENT: MUFs at Townsville were depressed 30% during the
interval04-08 UT, and at near predicted monthly values at other
times. Some spread F was observed near dawn at Townsville.
MUFs at Hobart were depressed by up to 40% for most of yesterday,
with strong spread F observed.

2806. NO CODE TECHS GETTING THE SHAFT ON LOCAL REPEATER.

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-06 01:08:00 UTC
From: pgeorge@sallie.wellesley.edu
Message-ID: <6MAR95.01080055@sallie.wellesley.edu>
Source record: 251323

There seems to be a new craze of putting down amateurs who have "N1" in the front of their callsign. "N1" is usually the prefix that denotes at Tech. or General Class Licensee. I was listening to a local repeater and was just amazed of how much "No-Code" bashing is happening. Apparently these "Bozos"" feel that amateurs with and N1 prefix are NOT considered to be "Real" amateurs, especially the "No-Code" ones. I had to see it for myself. I tried to check into this repeaters' Saturday night free-forum net. While all other types of calls were recognized, I as an "N1" was totally ignored...not once but several times. All I got was having one of these losers say.."Hey, was that an N1 ?", "he,he,he,he,ha....yeah sure". I hate to burst their bubble but I was originallya "KA1" novice who worked up the ladder BEFORE the amateur enhancements existed.I am a fully licensed amateur, have been since 1984. I have been a GENERAL since the spring of 1992. I feel I HAVE paid my dues. All that aside, this self-righteous egotistical attitude leaves a lot be desired. There ARE a lot a NEW amateurs out there who are a credit to the hobby. Then again there are a few who are NOT. I simply do not care if a person is trying to contact me an has an "N1" callsign....hey, I welcome the opportunity to communicate with that person. If the FCC did NOT make any enhancements in the late 80's, this age old hobby would eventually DIE due to the lack of some new blood in our ranks. Sure, there ARE a few "Glorified CB's" out there who simply moved up into the spectrum. They will eventually lose interest and let their tickets begin to lapse....GOOD RIDDANCE !

The "NO-CODERS" have every reason to upgrade, to know the code and advance. The code was a major pain in the butt. I wanted so hard to become an amateur since 1970, but that ol' code was the hardest hurdle to tackle. BUT I PERSISTED, and today I am a GENERAL and plan to work HARD to upgrade even more.

Please, give these new amateurs a break. This elitist bull-shit has got to stop, once and for all. I asked a friend of mine..."Hey, what is the matter with having an "N1" callsign ?". Well, I soon found out...the hard way. I asked him, "Is it gettign to the point that I should try to reclaim my old "KA1" callsign ?". He said, "Well, what do YOU think ?". If this is true, this elitist attitude spawned by these self-righteous idiots will be just another nail in Ham radio's coffin. Idiots.

Peter Q. George (N1GGP) ex. KA1NHJ

Hmmm... The radio control signal is certainly one way, but i think the
rules take that into account. Read 47 CFR 97 all the way through.
Could you interpret the RC uplink and video downlink as a two way?

I was wondering if anyone might know where stations using the call letters "S57" originate from. I had a QSO on 20 meters a few weeks back with S57MPL and have not been able to figure out where he was from. A few days later I again heard another S57 station on a QSO with a station from Texas but both were weak and I lost their signals. If anyone can let me know I would apreciate it. I'm still a little green at the DX game but have had a lot of fun with it.

Speaking of RC in the bands. I would like to start a movement to get space for RC in the 220 (222) band. I have changed the transmitter in one of my controls and am working on the receiver now.

220MHz (near me in VA) seems like a great place for RC, and helps make better use of the band. Any input?

1997 16* 18* 21* 23* 26* 29* 33* 38* 43* 48* 54* 60*

Asterisk indicates predicted value. No predicted values have changed
relative to the set of T-indices contained in last month's Summary.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under
class M flares. However, times of fadeouts are shown only for flares with
an energy greater than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
01 Feb 2
03 Feb 1 0135-0154 UT
04 Feb 1
20 Feb 1

2.1 Comments on Solar Activity.

Solar activity was at moderate levels on the following days this month:
1 February M1.0/0B 0911UT
M1.1/0F 0939UT
3 February M4.3/2B 0151UT
4 Febraury M2.6/2B 1544UT
Very low to low activity was observed on other days.

The maximum 10cm flux value for the month was 95 on 19 February. The minimum value for the month was 81 observed on 5, 10, 11 and 12 February.

The monthly sunspot number for February is a little higher than that seen in recent months. The monthly numbers show little indication of falling suggesting that solar minimum is still some way off. This is supported by the IPS rediction system which is presently suggesting a minimum in mid 1996.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

2-4 February Active to minor storm periods

7 February Active to minor storm periods

11-14 February Active to minor storm periods

27-28 February Active to minor storm periods

3.1 Comments on Geomagnetic Activity.

Several disturbances were observed this month. These disturbances are believed to be associated with solar coronal holes.

==========

IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

9 February Depressed 15% at times

12 February Depressed 15-20%

15 February Depressed 30%

27-28 February Depressed 15-20% during interval 27/2100UT - 28/0100UT.

4.1 Comments on Ionospheric Conditions.

Several ionospheric depressions were observed this month.

2811. Re: Out-of-band emergency calls (REPOST)

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-06 04:45:11 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseD5057B.LII@netcom.com>
Source record: 251231

It looks like the *FCC* doesn't have a problem here (saving a life emergency), but there other sources of government to worry about. There may be a rule: Don't ever mess with the police's comm channels. In some other law somewheres outside the laws that cause the FCC to exist.

Maybe, if someone in your ham club or repeater group is good friends with your town's police chief, you could have them describe your emergency capability, and that you'd only make use of it in dire emergency. That they would be prepared for such a call, and know who's doing it, that it's not some joker fooling around.

This contact person would need to be someone the chief knows and respects.

2812. Need manual for Autek QF-1A

Hi. Does anyone own one of FT-51R, FT-530, Alinco 580/582 ? I need to buy
a new radio (dual bander) but I get mixed reports from everyone. If
anyone has had ANY experience with these radios I would REALLY appreciate
a reply. Thanks and 73 for now :)
Regards, Aaron

2815. Original Ideas Needed for Radio Receiver :)

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-06 05:56:54 UTC
From: misc200@csc.canterbury.ac.nz
Message-ID: <1995Mar6.175654@cantva>
Source record: 251232

Hola Everyone,

I'm a third year undergraduate at the university of Canterbury NZ, and
I need some help.

I decided to do a comms paper this year, it has one project : design
and make your own radio. Fine easy you say... except that the marker likes
original ideas.

Last year one of the students taking the course spent a fairly
substantial sum of money to build a radio complete with surround sound etc.
etc. He got about 90%, but a smart young fellow built a crystal set and got
92%. The reason he got such a high mark was because he made his own diode out
of some sought of crystal he requisitioned from physics.

So my problem is to find an original idea for a radio which falls into
these catergories (in order of importance).

1: It needs to be original, I thought of extending the idea of the
crystal set a little by making my own tuning capacitor out of some of those old
fashioned razor blades (has anyone tried this?). Someone built a 'Co-hearer'
radio last year, that got good marks. Does anyone know of any unusaul am
receivers (the older the technology the better), or know of any books
describing early radio recievers?

2: The idea has to be reasonably easy to understand by an ignorant
undergrad, and has to be reasonably easy to implement.

3: I'd prefer it if I don't have to take out a mortgage ;)

Cheers,

Stephen Simpson

PS. Please email my elec account as I read it more frequently.

Hi out there ....

I visited an OM last Friday and saw a little device which he used for decoding SSTV / FAX. The device only consisted of some components and was used between the mic/phone and the RS232 port of the computer. Onfortunately I forgot to ask for a description of this device, now I wonder if there is someone else out there using such a small device, who can send me a description. By the way, I heard of some Software simply using the SoundBlaster, is there any Information on that?

WIA examinations

The next examinations conducted by NSW Division of the WIA will be held at Amateur Radio House Parramatta, 109 Wigram St., on Sunday 2nd April 1995 at 1.00 p.m.

Applications close : Thursday 23rd March

WICEN News

We would like to take this opportunity to thank the WICEN personnel who gave up their time at an impressive display at last week's Field Day, and in particular to the Hunter region for setting up their caravan.

This month is going to be busy, with the "RTA Big NSW Bike Ride" already in progress; the Watagan Horse Enduro commanded by the eponymous Dan VK2GG is today (with a 4am start!); the John Moyle Field Day is on the weekend of 18-19th March, in which WICEN Hunter will be taking part; and on the same weekend is the annual Bungonia Cave Rescue, for which Mark VK2XGK is looking for volunteers, and Mark can be contacted at work on (02) 936-8689; Hunter are meeting on the 20th March; and the end of WICEN's financial year, at which renewals are due, is on 31st March.

Events in April include the VRA Mid-Year Conference at Wooli (between Coffs Harbour and Grafton) on the weekend of 1st-2nd April; the Forster Triathlon on 9th April, and is commanded by Michael VK2CMW and Darryl VK2DAZ; the Hunter Anzac March, commanded by John VK2JRC is on 23rd April; and the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388. Finally, don't forget that the increased Amateur fees are expected to come into force in April, so keep writing!

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the February issues of the various magazines.

"Electronics Australia" starts with a factually-incorrect editorial from Jim Rowe VK2ZLO, in which (amongst other things) he makes the amazing claim that Amateur licence fees have not risen for ten years; amateur astronomers may be interested in a story on how pulsars (a pulsating radio source, not the car) were discovered; an optical-fibre audio link, which could have possibilities in a lightning-proof remote link especially if multiplexed, is discussed; a calibrated RF probe, good to a gigahertz, is built; various applications for the solid-state audio recorder mentioned last month are presented; newcomers can construct a simple AM radio; Tom VK7TM describes some software that supports the advanced TCP/IP protocols which he now bundles with his "Pocket Packet" kit, and this software will be useful when the experimental TCP/IP station becomes established here at Dural (the days of the primitive "BBS" and the "Sysop" are numbered); the effectiveness of recharging dry-cells is investigated; and finally, one for the old-timers: a simple quiz on servicing vintage receivers is presented.

"Silicon Chip" discusses fuses for toroidal transformers; yet another subcarrier decoder for FM receivers, albeit using a different technique, is constructed; those wondering how far away a thunderstorm is before it demolishes their station can build a simple lightning distance meter; a blast from the past, the 68000 microprocessor, is discussed; an infra-red illuminator, suitable for security applications, is built; and CW enthusiasts can construct a simple two-transistor CW filter (although we have to ask why their new logo for the "Amateur Radio" column is a cellular telephone!).

"Amateur Radio" includes a copy of the VK2 submission to the SMA in respect of the new licence fees (made in the apparent lack of action by other bodies); an adjustable audio filter based upon switched-capacitor filters is constructed; a simple mains voltage and frequence monitor, suitable for WICEN and Field Day use, is built; "L-matches" are described in great detail; a smart Nicad charger and a clever loop tuning capacitor are summarised; the Divisional Notes page mentions that whereas the VK2 Division is expanding its broadcasts, the VK3 Division is winding its back, so perhaps we could run theirs for them; and a modification to the Icom IC-751A to restore correct pass-band tuning is described (we suspect that Icom left it disabled because of patent difficulties).

"Amateur Radio Action" wraps up an interesting series on weather satellites; the VK2 submission to the SMA (a copy of which also appeared in "AR") is reprinted; an article on the packet radio network -- in particular about how "prima donna operators" make life difficult -- makes interesting reading; and some modes that appear to be falling in popularity, such as CW, RTTY and AMTOR are discussed.

"CB Action" mentions how to cut down on radio interference from computers and car engines; a simple regenerative short-wave receiver is constructed; techniques for installing a transceiver within a vehicle are discussed, are are some simple antennas.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

NEWS BRIEFS

Intrepid Radio Amateur, Dick Smith VK2DIK, is reported to have sold his highly successful company, Australian Geographic, to John Fairfax Holdings, for the tidy sum of $41 million. Apparently, Dick plans more adventures in his life. Perhaps some of those adventures will include Amateur Radio, like his record-breaking hot-air balloon trip across Australia.

***

The 25th anniversary of the nearly-disastrous Apollo 13 space flight will be next month, and Universal Studios is producing a movie to mark the event. Starring Tom Hanks, the film will reach Australia around the middle of the year. Will Forrest Gump have The Right Stuff ?

***

Not so many years ago, the nucleus of the atom was a fairly straightforward affair, comprising just protons and neutrons. Then, in the 1970s, some particle physicists got out of hand, started bashing the atoms about, and discovered that protons and neutrons could be split into further particles. That was when quarks were discovered.

For some years now, it s been known that there are six types of quark, known in the trade as 'up', 'down', 'charm', 'strange', 'top' and 'bottom'. Until now, the existence of the 'top' quark had only been mathematically deduced, but never really proven. Chicago's Fermilab was expected to announce this week that the elusive 'top' quark is definitely a reality; the discovery may eventually lead to an understanding of physical mass.

'News Briefs' looks at news items of interest to radio enthusiasts that appear in the mainstream media. Thanks this week go to 'The Australian' and 'The Sydney Morning Herald'. If your local or

regional paper runs an item of interest to Radio Amateurs, please
send a clipping to the Divisional office.

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET ON 24TH TO
25TH FEBRUARY; QUIET TO UNSETTLED ON 26TH, INCREASING TO
UNSETTLED WITH SHORT ACTIVE LEVELS ON 27TH-28TH WITH MINOR
STORM LEVELS 1800 TO 2100UT ON 28TH. THE FIELD WAS AT ACTIVE
TO MINOR STORM LEVELS ON 1ST MARCH, THEN UNSETTLED TO ACTIVE
ON 2ND.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE 15 TO 20
PER CENT ABOVE PREDICTED MONTHLY VALUES ON 24TH TO 25TH
FEBRUARY, 20 TO 50 PER CENT ENHANCED MOST OF 26TH, DECREASING
TO PREDICTED MONTHLY VALUES 27TH TO 28TH, WITH A SHORT
ENHANCED PERIOD TO 40 PER CENT. FREQUENCIES WERE AGAIN
ENHANCED TO 30 PER CENT ON 1ST MARCH; THEN 10 TO 30 PER CENT
BELOW PREDICTED MONTHLY VALUES ON 2ND. SPORADIC E WAS REPORTED
ON 26TH, 27TH AND 28TH FEBRUARY.

FORECAST (03 MARCH - 09 MARCH)

SOLAR: VERY LOW.

GEOMAGNETIC: UNSETTLED TO ACTIVE 3 MARCH, ACTIVE 7 MARCH,
OTHERWISE QUIET TO UNSETTLED.

IONOSPHERIC: DEPRESSED 15 PER CENT ON 3 MARCH, THEN MOSTLY
NEAR PREDICTED MONTHLY VALUES, POSSIBLE DEGRADED
COMMS ON 8 MARCH.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Changes at VK2RAP

Over the last 6 (or 12, time flies when you're having fun) months, a few dedicated Packet Radio operators have been working on trying to improve the VK2RAP wormhole at Newcastle University.

When first installed, we operated on 147.600 MHz (mainly to test the wormhole concept and reach VK2RAG). This was overcrowded and over used, so it was decided to put a user port on 147.575 MHz which, as you most likely know, is the digipeater frequency of VK2RPN on Mount Sugarloaf. This gave access to users trying this newfangled wormhole. It provided some links out of Australia and the potential of the worldwide Internet (or Informantion Super Highway, as it's now becoming known). As can be expected, users started making use of the facilities this opened up. These included Packet Conference servers and DX clusters for the DX hunters amongst us. The traffic on VK2RPN increased 10 fold.

After a few complaints from users that they could not access the local BBS because of the traffic to and from VK2RAP and that they were not interested in using the wormhole (directly, they may not have realised that a lot of the BBS bulletins and messages they read came via that route and then to VK2EO or down to VK2EHQ much faster that they used to!), it was decided to try a new frequency. A meeting was held and a VERY unused frequency was chosen away from the normal Packet frequencies. This frequency just happens to be in the 6 metre band. After a few months (some of the delay was due to the infighting going on in the WIA VK2 division) we finally got that licensed.

So the serch for adequate radios was on. We eventually settled on Phillips FM828 radios and our thanks go to Phil, VK2YK, for his assistance in procuring these.

The next step was an obvious one. Get the radios modified to suit our frequency. Off to the crystal manufacturer we go. After a 2 week wait for the crystals we were in business. All that remained was the need for mods for packet operation (TNC connections etc.) to be done and antennae to be built. Our thanks to Mike VK2FMB for having the patience and time to modify the radios for us, and to Maurie VK2CD for making the vertical antenna.

A trial between VK2XPX and VK2BDM with the first 2 radios proved they worked and tests by VK2ZMK showed the need to go horizontal (with our antennae!). Thanks to John VK2ZMK for his efforts too.

With all tests out of the way we picked a date for the installation at the university. This date obviously came (you haven't noticed the reduced traffic on 7575? SHAME!) and a small group including VK2EO, VK2XPX, VK2GNP, VK2BDM turned up to do the hard work. After much grunting and groaning the antenna was installed on the roof (it's also quite a climb up a couple of stories, lucky we had some stairs to go up even if they are at the wrong end of the building). Work then began inside, with connecting the radio and the tnc up and reconfiguring the VK2RAP

computer ports and routes to suit the new frequency.

OK, now here is the bit that is of major importance to the users of VK2RAP. Firstly, is is envisioned that the users will move off 147.575 MHz and 147.600 MHz and utilise the following nodes to gain access to VK2RAP (if in fact they need it) or by just using the services of those nodes, transparently go through VK2RAP. This is being done to alleviate the congestion on the digipeater frequencies. It is also felt that it will speed things up to the wormhole as it will not suffer desensing.

The stations with direct access to the wormhole and the users' access frequency for these stations follows:

VK2EO: 144.750 MHz via VK2RTM-1 (Rose node), 144.725 MHz via VK2RGL-1 (Rose node), 147.600 MHz via VK2RAG and 439.075 MHz. As this station is a FBB BBS you will have to use the gateway command from within FBB, if you don't know how to do this just leave a message for Geoff and he will explain it for you, Of course being an ordinary BBS you can get some things first when they come in via the wormhole.

VK2BDM: 147.550 MHz via VK2RND-1 (Rose node).
This system is a full TCP/IP system so there's the full range of possibilities here mostly available to any Amateur who connects over the radio, but yoy may have to ask for privileges for something special. Just leave David a note and he will help you. Dave also runs a conference server. To access this just type CONV at the prompt. Dave also runs this system as a BBS so there are some things here worth looking for in the message areas.

VK2GNP: 147.575 MHz via VK2RPN
This system also runs a conference server and the same applies as far as talking to Gary, he's sure to help.

VK2GWJ: 147.600 MHz via VK2RAG
Greg also runs TCP/IP and will give access from the south for those of you who have trouble with RAG. Get in touch with Greg to explain how to use his system.

VK2ZMK: 144.925 MHz via VK2RET (Rose node)
John has the intention of putting his radio on the hill with the VK2RET Rose node and making it a 3 way node. This will give access to VK2RAP for those up the coast as far as Lismore, (late update: he put it up today 23/2/95 but signals weren't good enough to establish a connection).

VK2XPX: 147.575 MHz via VK2RPN
Dave is going to use his system for remote sysop functions and other developments but if you get stuck and the system's there give it a go or leave a message.

Further expansion is on the cards with the 9600 Baud full duplex link to VK2RAG from the University being worked on at the moment. The person responsible for this has had a few problems with radios, so it may be a while off yet. We are also testing the new TEENCEE2 from Comrad Pty Ltd. Our thanks must go to Peter VK2UPP for the use of one of these units. It is hoped to get a few of these and use them on 4800 baud on the link frequency.

The other developments may change after Gosford Field Day (we've got a sysops' meeting there), but there's the possibility of a new system running under "linux" (a free Unix operating system that replaces DOS) and more access to the Internet itself rather than just using it to tunnel through to other places.

Also, Netrom was turned off at VK2RAP as it was found to cause too many system failures. Since removing it the system has worked faultlessly, but let us know if there's a need for it and we can work on ways to put it back.

So to sum up, direct user access is being phased out, you will have to use one of the stations listed to get into VK2RAP. But, this is hoped to solve some of the problems that have been there and (again hopefully) won't run too many users off. Above all, thanks for your patience as we're making the changes and by all means talk to us if there's any problems (or good ideas) you have.

Finallly a word of thanks to the Newcastle Microcomputer Club for their financial assistance. Bruce VK2KJF, Geoff VK2EO, Maurie VK2CD and John VK2ZMK fdor their work on radios and antennae, David VK2BDM, Gary VK2GNP, Geoff VK2EO and Dave VK2XPX for braving the heights and installing them, and (again) you guys (the users) for patience whilst all these changes are going on.

Submitted by VK2EO and VK2XPX on behalf of Newcastle Microcomputer Club and Newcastle District Packet Radio Group

Club news: AATC

Australian Amateur Television Club

The next meeting of the A.A.T.C. Inc. will be as usual the 2nd Sunday of the month - March 12th 1995 to be held at Radio House in Wigram St - Parramatta - 1.00 pm.

The technical demonstration on the day will be the sending of video over a 1000 feet (300 meters) on twisted pair fence wire.

Anyone interested in ATV is welcome to attend for general information about ATV and the waht is required to be on air.

For more information about ATV - contact the Publicity Officer on (02) 587-3491 between 4.00 and 10.00 pm Monday to Fridays.

Remember the Wyong Field day is only 51 weeks away -- see us there!

AATC Inc. Publicity Officer Bob Barnes VJ2R

Club news: AAPRA

Australian Amateur Packet Radio Association

If you did not reach the second floor of the grand stand at the Wyong racecourse last Sunday you must have missed the AAPRA activities. We had a lot of visitors though to see the demonstration of 4800 baud packet as well as Baycom, Paket 6 and TPK. By digipeating through VK2RND Newcastle we could get back to Sydney thus enabling one of the better known sysops to contact himself and see what we humble users have to put up with on a crowded channel.

Thanks to the presence of the Fisher's Ghost Amateur Radio Club - two floors below - we could operate with them at 4800 baud. It was hardly a DX record but clearly showed the advantage of higher speed packet. Our packet programs were in demand and it was pleasing to be able to welcome several new members to AAPRA.

The Field Day was undoubtedly successful, we had a good day and it seemed so did everybody else.

From Geoff VK2BQ AAPRA Publicity Officer

Club news: St George

From the St George Amateur Radio Club

Members and other interested listeners are advised that on Saturday the 1st of April the society will be holding its annual Allan Pettiford Memorial Auction.

The auction will be held at the normal meeting venue, that is the 1st Allawah Scout Hall corner of Bellevue Pde and Blakesley Rd, South Hurstville.

Equipment for the auction will be accepted between 10 and 11am.

Viewing of equipment between 11 and 12 noon.

Visa, Mastercard and Bankcard credit card facilities are expected to be available and the snack bar will be open during the course of the auction.

Inquiries regarding any specific details are welcome, please phone the society's publicity officer Allan VK2XF at home on 533-1006.

de Allan VK2XF, Publicity Officer

Club news: WARS

Waverley Amateur Radio Society

The next meeting of the Soviety will be on Wednesday March 15th at 7.30 pm at the club in Vickery Avenue, Rose Bay, next door to the

RSL. Doors open at 7.00 pm.

The main topic of the evening will be a talk and demonstration by Michael Stubbs-Race (VK2ASR) covering remote sensing and "QFAX" software for decoding weather information. You don't need to be a licensed amateur to make use of these facilities which should appeal to all those having a keen interest in the weather such as sailors or farmers.

Now that the Society has a permanent venue at Rose Bay, it is commencing classes for prospective amateurs and those wishing to upgrade their licences. A video based theory course is to start on Tuesday the 21st of March and will continue every Tuesday for 20 weeks.

Our first morse class aiming at the 10 wpm test is nearing a close and a new class will follow. Would anyone interested in either class please contact the Secretary, Grant Hinchcliffe, VK2TU, on 957-7100 during working hours or 319-1913 after hours.

Simon Buxton - VK2EII - Publicity Officer

COMING EVENTS

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Shortwave Listeners...

Proposed new Amateur licence fees scheduled to come into effect, 1 March, but this may be delayed until late April--so please keep writing!

RTA Big NSW Bike Ride (WICEN) . . . . . until 11 March
Summerland ARC Annual General Meeting . . . . . Today
Watagan Mountains Horse Enduro (WICEN--Dan VK2GG) . . . . . Today
Michelangelo's birthday (check your PC for the virus!) . . . . Monday
Signals Reunion at Wagga Wagga . . . . . Saturday-Sunday
Australian ATV Club monthly meeting at Parramatta . . . . next Sunday
Waverley ARC meeting . . . . . 15 March
Bungonia Cave Rescue exercise (WICEN--Mark VK2XGK) . . . 18-19 March
John Moyle Field Day . . . . . 18-19 March
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 20 March
Waverly ARC Amateur classes begin . . . . . 21 March
Divisional Trash and Treasure Sale . . . . . 26 March
Great Lakes ARC members meeting . . . . . 31 March
St George ARC Annual Alan Pettiford Memorial Auction . . . . 1 April
Forster Triathlon (WICEN--Michael VK2CMW & Darryl VK2DAZ) . . 9 April

If you have an event you d like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066. Packet items may be sent to VK2SKY @ VK2AAB.

Items can also be sent by post to the Divisional Office, to arrive
before close of business on the Friday preceding the broadcast.

BARTG * GB2ATG * NEWS * BARTG * NEWS * GB2ATG * BARTG
This is the - British Amateur Radio Teledata Group - News Broadcast Service
for all Amateurs and Short Wave Listeners interested in RTTY Amtor, Pactor
and Packet Radio.

This news is broadcast during the first full week commencing Monday each
month, to the following schedule..

Evening transmissions at 20:00 U.K. local time on 3.584 MHz. Mark.
RTTY on Monday-AFSK, Wednesday-AFSK and Friday-FSK.
Pactor-FEC on Tuesday.
Amtor-FEC on Thursday and Saturday.

Morning transmission at 10:00 U.K. local time on 7.041 MHz. Mark.
RTTY on Sunday-FSK.

Both frequencies could be +/- for QRM.

An edited version of this bulletin is available on the Packet network as a
BARTG at GBR. file thanks to: Andy (G3ZYP) BARTG Chairman and Publicity
Officer at GB7MXM.#36.GBR.EU.

It is also posted on the "INTERNET" system via the INFO-HAMS list on UCSD.EDU.
thanks to Iain (G6ARO) who is available on the "JANET" network as
Iain@HUMBER.AC.UK

News for March 1995. Bulletin No. 027.

BARTG Information.
BARTG are proud to announce that their "New Improved Multyterm" Terminal
Unit for Pactor, Amtor, RTTY, SSTV, CW and FAX has just passed the
rigorous EMC testing in compliance with the EEC Standard EN 50082-1:1993.
BARTG is an Amateur Radio Club and is believed to be the first to have
obtained compliance to the EEC EMC standard which applies to Residential
Environment. Further details can be obtained by contacting BARTG Components
Manager: Ken Godwin (G0PCA). 11 St. Lukes Way, Allhallows, Kent. ME3 9PR.
Telephone 01634 271548.

RTTY DX Activity. (all times are GMT.)

3.5 MHz.
T94DD 1830, RA2FB 1900, EI3GZ 2000, IS0QDV 2100, LY1BZB 2130,
9A1BST and S57DX 2200.

14 MHz.
KL7XD and PY7AJI 0930, HI8BG and YL1ZE 1130, WP4Q 1200, DU1SAN 1230,
UA2AO and J20UFT 1400, 9K2KF and VK6GOM 1430,
4S7/JA4FM and EW8AU 1530, JW0I 1600, XX9AS, VE6JO and WL7EF 1630, CU2GE 1700.

21 MHz.
VP8CKN, C91A, TY1PS, HK1LAQ and ZS6YA 1500.

QSL Information.
4S7/JA4FM via JA1FHK. XX9AS via KU9C. T94DD via K2PF.
J20UFT via F5LBM, Patrick LaBeaume, 38 Chemin du Plateau,
F-67500 Hagueneau, France.
EW8AU to Vladimir N. Prihodko. Box 68, Gomel 246027, Belarus.
YL1ZE to Box 171, Bauska, LV-3900, Latvia.
JW0I (Henry SP3ASN) to Box 280115, Berlin 13441.

Contests.
The Spanish EA-RTTY Contest starts 1600 April 1 until 1600 April 2 on all 5 HF bands 80 through 10 meters according to IARU band plans. (Please note revised date for this contest.)

Classification:
A) Single Operator All Band.
B) Single Operator Single Band.
C) Multi-Operator All Band only.
D) Short Wave Listener.

Exchange Message:
RST plus CQ zone number.
EA stations send RST plus *Prefijo Provincial* and CQ zone number.
There are 52 Spanish *Prefijos Provinciales*

QSO Points:
On 10, 15 and 20 meter bands, score one point for QSO within own continent.
Score two points for QSO outside own continent.
On 40 and 80 meter bands, score three points for QSO within own continent.
Score six points for QSO outside own continent.
Contacts between stations in the same DXCC country are valid for Multiplier credit, but have Zero QSO points value.

Multipliers:
On each band, count one multiplier point for each CQ zone and each Spanish Province (*Prefijo Provincial*).

Final Score:
Total QSO points from all bands times total Multipliers from all bands.

Trophies:
Award and plate to winner in Class A).
Award to winners in Class B), C) and D).

Logs:
Use separate log sheet for each band. Include Summary Sheet showing, Scoring and other essential information. Official Log forms are recommended. Mailing deadline for all entries is May 5th 1995. Send completed logs to:

EA RTTY Contest Manager, Antonio Alcolado (EA1MV). P.O. Box 240,
-9400 Aranda de Duero (Burgos), Spain.

Notes of Interest:
J20UFT was operating from Maskali Island in the Gulf of Aden. IOTA AF-053

South Shetland Isl. (DP1). RTTY activity is now reported from
February 6 at 0030z on 14 MHz. QSL via DD6UAB.

Conway Reef (3D2). Plans to activate this one from March 24 until
April 3 using all bands and modes. QSL RTTY contacts to SM7PKK.

Spratly Isl. (DU0). A team from the Philippines A.R.A. plan to run
all bands and modes from April 10 to 16. QSL via DU9RG.

Thanks this month to..
G3ZYP, GU0SUP, DXNS, VK2SG/RTDX.

BARTG caters for all DATA interests with information-components- kits-ready
built units and professional software for the P.C. and other computers
covering all common data modes.
Members receive a quarterly journal devoted to data modes.
Beginners guides for most data modes are available which are currently being
updated.
The group sponsors HF RTTY - Amtor - Pactor contests, administers its own DX
and members award schemes and holds an annual rally.

Please address membership enquiries to :-
Membership secretary, Peter Adams (G6LZB), 464, Whippendell Road,
Watford, Herts. WD1 7PT. enclosing SASE. Telephone - 01923 220774.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted
via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the
broadcast may also be mailed to this address, as well as any queries regarding
services offered by BARTG.

The news as distributed by G0ARF. 950227.

```

G'day guys. There are lots of one-way transmissions on ham radio. The
law permits one way transmission of things such as news items of interest
to the ham community, and code practice, but what doesn't seem to be addressed
by part 97 are the things like keying a radio with a pl tone on to see
if it activates the tone squelch of another radio, and general fooling
around on the bench. Some of this is done into dummy loads, but some
is on the air. Signal field strength tests fall into this area. Ham
radio is about experimentation, and it sounds like that is what you
will be doing. If it were me, I'd prolly just go for it. A good way to
identify the ATV station on board the aircraft is to hold your QSL card
in front of the plane for a few seconds just before takeoff. Most
R/C flights are 5 to 8 minutes, so the 10 minute rule will be easy
to keep up with.

Let us know how it goes.

|> 73

Are you asking for opinions? On usenet? Heh heh.
OK, here's mine. I don't like to see model aircraft operated on the ham bands, and I discourage it within my extrordinarily small circle of influence. One reason is that the band plan is generally not known well enough for models to be safe from experimentors, or anyone else with a VFO. If they stray into the RC part of the band, a 1 to 3 HP engine spinning a prop at 10 to 15 thousand RPM is going out of control. Not a good situation. Another reason I discourage it is that a lot of RC equipment gets sold via consignment at small local hobby shops. If a guy is going to upgrade a radio, he is usaually going to sell his old one with an old plane using this market. The hobby dealer prolly doenen't know about ham radio, and may not care if he did know. He just wants his fifteen percent. This puts non-hams on the ham bands. We'd all hate to think one of our own (hams) would let a radio get sold this way, but I've seen it happen. I knew better that to try to tell the new owner that he bought a radio he can't legally use.

I have always wanted to do the same thing with RC ships. Now with the cameras being so small, I just may mount one in the bridge of an RC ship.

I recall a ham mounting an ATV setup on the chassis of a RC car. He used it at a hamfest and drew a large crowd.

I'm going to be visiting central FL on business over the 3/10-3/12
weekend, and would like to know if there are any hamfests in that area.

Your response is appreciated.

73,

rob

I have been attempting to telnet to the buffalo callsign server with:

callsign.cs.buffalo.edu:2000 as the address.

I get a connected message, but nothing happens from there until the link
times out. Are others having this problem or is my provider's software
demonstrating a bug?

>now.

It depends on what you're trying to do, Jason. If your goal is digi-Dxing, then of course the 56kb system does you no good as an independent end user. You'll only achieve throughput equivalent to the slowest hop in your Dx path (actually *much* less). However, that's hardly a worthwhile use of packet technology in any event. If, OTOH, you want to implement a MAN that can move a lot of data in the local area, then the 56 kb system makes a lot of sense. Sure, your out-of-area links will still be slow, but they'll be carrying a lot less traffic than your local paths. 56kb is also useful for replacing slower links between MANs that have a high traffic loading. That can be done one trunk link at a time. It doesn't have to happen to the entire WAN at once.

Of course, any of the useful things you can do with packet requires cooperation and planning. It's not something one person can do by himself. It makes sense to start by forming local MAN groups and work your way up to establishing trunking groups implementing a WAN connecting a bunch of MANs. What's a waste of time and resources is continuing to fool with 1200 baud or even 9600 baud links. They don't have enough throughput to do much of anything useful or desirable. About all they're good for is to allow some freeloaders to play digi-dxer, or for a few BBS systems to slowly move some Email. Those things were admirable in their time, but arguably their time was ten years or more ago.

Now I don't want to give the impression that exploring the existing hodge-podge set of slow links is not fun. It can be fun for a few days until you've exhausted the connectivity possibilities of the ad hoc collection of independent digis you can reach. After that though, what good is it? Ok, occasionally you'll torturously exchange a few lines of text with a new station somewhere down the links, big deal, you might as well be using CW.

Packet is for moving data, preferrably lots of data, between cooperating computer systems. For that you need a moderately fast and robust network. And that requires a well connected cooperative system, implemented intelligently. And that requires an organized group effort. It only makes sense to do group purchases of 56kb equipment, since it'll take a group effort to organize and use the resulting network efficiently. But that does make a lot of sense right now.

In the future, we'll think 56kb is horribly slow, and hardly worth the effort. But for now it's the hottest thing in town, and the first speed step that allows real useful applications, beyond exchanging a few lines of ASCII text, to be run on the packet network.

The key to making any of this happen, however, is to look beyond the technology and look at the social and organizational efforts required to make it happen. Without those, we might as well be using tin cans and string. Packet is inherently different from almost everything else amateurs do. It's inherently a cooperative enterprise among a group of people. One on one contacts could be handled as well, or better, by using AMTOR, or even RTTY, rather than dealing with the high overhead of packet. Packet is designed to be multi-way and multi-user on common channels. It depends on cooperative relay stations beyond the horizon. It has to be a group effort to work properly. Guys going out independently and buying a 1200 baud TNC and hooking it to their HT and terminal aren't helping to build a useful packet network anymore (if they ever were).

Those who would build networks have to ignore those types of activity and concentrate on getting solid communications *systems* organized in their areas. The 56kb RF modem should be their first choice right now for implementing those systems. It offers solid, reliable, moderately fast, and *cheap* packet networking. On a per bit basis, it's 47 times cheaper than 1200 baud TNCs and radios. On a spectral usage basis, it can replace 1880 kHz of 1200 baud spectrum with a single 100 kHz channel. I fail to see how any group contemplating a packet MAN can afford to ignore it.

>tempted to try that trick. But I'm not sure how much it'll buy me.

Ok, there has to be a reason why you are full quieting at one location,
and totally out of the machine only a mile away. Free space signal strength
just doesn't drop off that rapidly. For some reason, you have to be out of
line of sight at the second location to get that much signal attenuation.
The first assumption is that would be because of natural terrain blockage.
If that's not the case, then it has to be manmade blockage, or it could
be that you've simply finally gone over the radio horizon from the repeater.
In any of those cases, height will solve the problem, antenna gain alone
probably will not. I'll stand by my advice to get a topo map and find out
why you aren't getting normal free space response at the second location.

>

Hi,

I'm not sure of the legality of this, but then I'm not sure of anything...
However, I also fly RC airplanes and once had 2 friends (Hams) who
mounted a camera on a large Bipe...They used a standard FM
RC radio to fly the plane and flew it visually, not from the video...If I
remember correctly, they used one of those cheapo transmitters
sold to send VCR from room to room in a house as the video
transmitter (I've recently seen them for sale at places like K-Mart and
Walmart, called a 'Rabbit'?)...They had a generator sitting outside their
van and were video taping the flights on a VCR inside the van...It was
great...Touch & goes, loops, wing overs, etc...Then they got just a little
too low on a low pass and drove the plane into the ground...Splat...They got
it all on tape...

>I would highly recommend the course to anyone who wants to learn code.

Code Quick is good for some people, Geoff, but don't fall into the trap of others on here who think that one method will fit all. I know some people who, like you, benefited from the Code Quick method, but I also know others who found it to be no help. The same cognitive strategy won't necessarily work for everyone.

The clear point of all this is that different people need different learning strategies to succeed. Most, but by no means all, people can learn to decode Morse by one method or another well enough to meet the minimum exam requirements. It's important for people having difficulty with Code to understand that the methods that work for others may not work for them. They have to keep an open mind and look at several different strategies until they find the one that fits their own cognitive style.

Most of all, people having difficulty with Code should not let those smart-alecks who say, "I did it in two weeks you lazy so and so. You're just not trying.", get them down. I know all too well that sort of crap is not true, and I expect you do too. Even after you find a learning

method that is workable for you, it can still take a large amount of effort and time to get to even the minimum copy speed.

You progressed faster than I did. I got the initial 5 WPM in about 6 weeks, but it took me an additional 13 months of 2 to 3 hours a day practice (a large chunk of that on air in the Novice bands) to get to 13 WPM. I was a young kid of 13 with time to burn. There's no way I could justify spending that amount of time today. However, today I know about several alternative learning strategies, and one of those could well have cut that time down to a reasonable figure. If not, I could still enter via the code test free Technician route.

I once met a fellow who could add a column of telephone numbers in his head as fast as I could read them to him. He could have thought I was lazy for having to use a calculator to check his results, but he was smart enough to realize he had a special gift not shared by everyone, and didn't gloat like certain smart-alects on this list do. Instead he was genuinely helpful and showed me several tricks I could work on the calculator to speed up my arithmetic.

There's a lesson there for those too quick to lay the charge of "lazy" against those who do not share their savant talent for being a human modem.

2845. Callsign Analyzer, ver 1.1

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-06 18:37:09 UTC
From: jon@uci.uci.com
Message-ID: <3jfkol$8qg@uci.uci.com>
Source record: 251309

Major updates have been made to the callsign analyzer. Eastern Europe
should be up to date. Many updates for various island callsigns.
Many updates were added for Antarctic stations. More details are now
available for New Zealand callsigns.

Thanks to Jim Reisert, AD1C, for telling me of an ftp site with the latest
prefix information (site: maspar.maspar.com, directory: /pub/k2mm/ct-files/,
files: arrl.px and cqww.px). T

Thanks to Stephen McNeill, ZL4HG, for sending me information about
ZL callsigns.

--

An experimental mail reflector which identifies callsigns within a
message can be accessed by sending mail to callsign@uci.com. Your
message will be returned with the country of each callsign append
right after the callsign.

For example, if the message:

A32AAA DE PY3AAA K

is sent to callsign@uci.com, this message will be returned:

A32AAA[Tonga] DE PY3AAA[Rio Gran de do Sul Brazil] K

The format of the message is not important. If the body of the
message contains callsigns, the analyzer should find them.

Grid locator squares are also identified and translated to latitude and
longitude.

--

I would appreciate input in these areas:

1) Whether the oblast information for the former USSR is accurate.
I would like to hear from someone who is knowledgable in this area.

2) Location or other information that is reflected in a country's callsigns.
So far I have this information for Argentina, Brazil, Mexico New Zealand
and Sweden. Any others? I have some of this done for Canada, but there
are probably some holes that could fixed if someone would point them out
to me.

The source code is available via gopher at gopher.uci.com under the
"Software Sources" directory with the name "call_analyzer.tar <Bin>"

Some versions of telnet won't let you specify a port number for a
connection and will ignore one if you try to give it. You'll be
connected to the telnet server, which is not what you want in this
case. There isn't much you can do about it except try from a different
system.

The system where I noticed this was VAX VMS, there may be others. I
think from Unix systems the port option will always work.

Well, port addresses work fine for our VAX. I just don't use the ":" between edu and 2000. Just connected there a couple of minutes ago--

^^^^^^^^
But modifying a radio (or even building one from scratch) isn't subject to
part 15 or part 97 or any other FCC rules. Only operating it is!
The only exception I know of has to do with power amplifiers that can
operate on or near the 11 meter band. (And even that rule is the wrong
solution to the problem, IMHO.)

>EVERY Amateur radio manufacturer submits his radio for Part 15 testing within a certain

operation.

Ah, but selling a radio, especially as a commercial business, subjects you to
all kinds of rules that don't apply to someone tinkering in his garage. If a
manufacturer gave away instructions on how to modify their radio, then it could
be construed as their promoting the capability for the radio to operate in a
manner for which it was not tested. That doesn't mean it's illegal for you to
figure it out on your own.

>Many times even the wide receive modifications are not legal as the receiver has not been
tested
>in those frequency ranges, therefore would not pass FCC Part 15.

If I build a radio (or modify one) then when I operate it, I am responsible for
ensuring that it meets part 15 standards, but I am not required to get it
officially tested. If indeed the radio had excessive emissions, then operating
it could be illegal, but the fact that it hadn't been tested is not what would

make it so. And simply possessing it, even if it didn't meet part 15 would still be legal.

2852. Chimney Mount Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-06 20:58:02 UTC
From: WWHITBY@lan.mcl.bdm.COM
Message-ID: <sf5b308b.020@lan.mcl.bdm.com>
Source record: 251257

I live in a rental house and I plan on attaching an antenna mast to my chimney. The chimney won't be used because of a poor draft, so I don't have to worry about soot coating the antenna. My big concern is grounding. All of the information I have on grounding refers to towers. Can someone let me know what would be the best way to ground the antenna and mast?

tnx in advance,

Warren Whitby

2853. FT-51R Batery Eliminator

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-06 21:19:21 UTC
From: dkriss@moontower.com
Message-ID: <3jfu8p$mbn@beacon.moontower.com>
Source record: 251315

I purchased, and had to send back, the W&W battery eliminator for the FT-51R. The problem was it steps the voltage down from 12 or 13 volts to 8.0 volts. My understanding is the FT-51R needs 9.6 volts to generate full power.

Anyone know of a battery eliminator for the FT-51R that will provide 9.6 volts?

To all radio amateurs

SB QST ARL ARLB021
ARLB021 Vanity call schedule

Vanity call schedule

The Federal Communications Commission form necessary for applying for an Amateur Radio vanity call sign--Form 610-V--will not be available until after May 1.

Amateurs who call the FCC to request the form before then will not have their names recorded and it will be necessary for them to request the form again, when it is available.

Applications for amateur vanity call signs will not be accepted until after the forms are available, i.e., until sometime after May 1. The FCC will make a public announcement of the date of opening of the first ''gate'' for vanity call sign applications.

Beginning May 1, 1995, FCC Form 610-V may be requested by calling the FCC Forms Distribution Center at 800-418-3636. Or, send an SASE to ARRL-VEC anytime, for a form 610-V by return mail as soon as they are available after May 1. Write ''Form 610-V request'' on the outer envelope.

Yes, unfortunately, this happens.

This kind of behavior, though, is exactly why, even though I moved out of 1-land and upgraded to Extra, I kept my N1 call.

For your statistics, here's an Extra who started out as a no-code Tech. There are many of us.

Funny, I don't hear this kind of rude behavior on the Extra CW bands.

: >that stops me, and it is really fustrating to not be able to do it.
: >ANY help would be extreamlly appricated.
: >73s de Matt N2MDB

: Matt, your problem may really be ADD, but I doubt it. The problem you
: describe is actually quite common, and results from attempting to learn
: the Code incorrectly. You're listening to the individual dots and dashes
: and trying to do a mental lookup table conversion. That will work for
: many people up to about 8 WPM, but not for everybody. In your case, it
: apparently won't even work at 5 WPM.

: You need to learn the Code a different way. You must condition the
: wetware to respond reflexively to the entire sound of a character as
: a unit. You can do that since you can recognize entire English spoken
: words, and those are even more complex sound units. It's not necessary
: that you associate meaning with the sounds, only that you recognize
: them and reflexively copy them down.

: Reflex copy only comes with drill. Try using a good drill program and
: copy automatically at the keyboard. Condition your fingers to automatically
: strike the correct key when you hear the sound unit of a letter. *Don't

: think about it*. Just do it. Your conscious mind is interfering with the
: copy process. You need to empty your mind, or occupy it with something
: else, while you copy so that it won't interfere with the process.

: You have to learn to copy Code the way you learned to touch type. It
: can't be a conscious process. The body must just *do*. If after 6 weeks
: of drill you still don't have it, then you may need to look at other
: options. If you really can't associate the sound units with letters,
: then you may need to mark the sounds down on paper and sight read them
: to answer the exam questions. Some VEs won't allow that, but the FCC
: examiners did and some VEs will, and it's a valid way of getting the
: information down on paper. It is the way Samuel Morse designed the
: Code to be used.

: You have to get that 5 WPM before you qualify for a waiver. So you're
: just going to have to figure out a method that works for you to do so.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 MARCH AND FORECAST FOR 07 MARCH - 09 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 05 Mar
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Mar 08 Mar 09 Mar
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Mar: 84/26

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 05 Mar
Learmonth 5 2221 1211
Fredericksburg 8 16
Planetary 8 14

Observed Kp for 05 Mar: 4224 3332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Mar 20 Active
08 Mar 12 Unsettled
09 Mar 12 Unsettled
COMMENT: IPS Geomagnetic Warning 7 was issued on 5 March and is
current for interval 7-13 March. Active levels expected for today.
Field is then expected to be quiet-unsettled until 10 March when
active-minor storm levels are expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Mar normal normal-fair normal-poor
08 Mar normal poor-fair poor-fair
09 Mar normal normal fair
COMMENT: HF conditions are expected to be initially good for today
then degrading.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
06 Mar 32 about 15% above predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
07 Mar 30 About 15% above predicted monthly values
08 Mar -10 About 15% below predicted monthly values
09 Mar 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 6 March and
is current for interval 8-13 March. MUFs at Townsville were enhanced
15% during daylight hours. MUFs at Hobart were near predicted monthly
values, with spread F observed during local night. HF comms are expected
to be good for the first half of the UT day today, then degrading during
local night for southern Australia region. Northern Australia region HF
communicators should continue to use T=15 for 8 March.

I was reading the October 94 QST, and found the article "Backpacking, Troop 404 Style" pretty interesting. It makes account of the use of portable HF gear during a typical weekend hike.
But what caught my attention was the use of solar power to recharge the batteries for the HHT. I would like to know if anyone in the news group has had similar experiences with ham radio and mountain climbing, specially high mountain climbing (e.g. the Alpine range, the Andes, the Rockies, etc.). If so: what kind of gear was used ?, what about power, and weight? and so on. Any help would be gladly appreciated.

From: bob@raddev.com
Message-ID: <3jgbms$ddt@caesar.ultra.net>
Source record: 251186

Using the DLL and programming examples that comes on the
QRZ! CDROM, I wrote a Windows program to find all available
1x2 and 2x1 callsigns (currently unassigned). If you would
like a listing of any district (0-9), then just send me a
SASE to Radio Devices address below.

If you would like all districts listings (after all you can
select a vanity call from any district regardless of your
address) then send me a 1.44MB 3.5" floppy in a mailer
with return postage.

If you would like my project listings (Visual Basic), then
send me a floppy in a mailer with return postage as above.

I am providing this free. I will not email the files due to
their size.

I have only written the code for 1x2 and 2x1 calls, sorry.
You can easily write your own with the DLL and sources
provided on the CDROM for 2x2, 2x3 etc.

Uhhhh, excuse me Dr. Braun but that was not my post. None of my brothers
ever took any amateur radio exams. I used to be a VE and now am not
because of employment. I have no problem with the number of times a
person takes an examination element so long as each exam is distinctly
different from any previous attempt. I attempted to tell that to the
person who wrote what you indicate me as saying.

Sorry...wasn't me and saying anything akin to what I actually said is
preaching to the choir. hehehe

I am sure this is an honest error on your part. We need to be more
careful how we reply to the postings of others....I know...I speak from
experience. <|-(I've done it too.

Funny, I've been practicing medicine for 15 years and have never heard of
the string reconation part of the brain.

Seriously, there _are_ some disabilities that interfere with a person's
ability to copy code to the extent that they couldn't pass a CW test;
however, most of those disabilities also significantly interfere with a
person's ability to pass a written test. I wrote a 10-page commentary on
this subject, dealing with a number of specific disease conditions, that I
submitted to the FCC when the disability exemptions were proposed, and some
of those comments were incorporated in their final "Report and Orders" on
the subject. Most of the stuff I see in these news group discussions has
lots of emotion but very little solid science to support it.

PS - I think I could still dig up those comments on a floppy disk
somewhere if anyone is interested in them.

Anyone who would attempt to say "double-you" when they mean the letter
"U" twice should not be on the air anyway... Not to mention, I don't
believe that would be a valid identification.

Of course, the radio announcer in me comes out in pronouncing the letters
correctly...

This is why I'm keeping my callsign for life or as long as its free,
whichever ends first. Since I quit Morris and went to SSB I've avoided a lot
of those nasty QSL cards with the associated nagging guilt of not replying
for lack of a postcard stamp. There is also the comfort it provides me in
knowing that I won't be ticketed some slight discrepancy.
For the record, its:

dub-yaaaaaah seven el-dee-vee

Invariably confused with W7LDB, WB7LDE, KA7LDT, and many other variations.

My call avoids 'extra syndrome', allowing me to talk to newbies on a
friendly level. It may also bring out the true character of a more senior
appliance operator when they confuse me with KA7LDV or something.

I chatted with WA7LZE on a Russian bird last nite. He was using Morris
but I answered with ducktalk in order to remain anonymous. The bird went
over the edge of the world before I could ask him why he would ever keep
such a call.

: (not such a bad idea..) with an HF endorsement (code test).
: for grins, go look up the guys that are complaining and find out their
: story in amateur radio...and then go dig up some other N1s that have
: far surpassed them in license class so you can be ready with a "so there".

(snip)

I think that this has less to do with license-class and more to do with the sad fact that there are a lot of self-centered, self-important jerks in the world. I would guess that ham radio has no more, and, sadly, no fewer than the general population. If there was a single license class and everyone had "generic" calls, these people would still find some other equally sad way to bolster their deficient egos. License class and call sign (and race, nationality, sex...) do not _cause_ this kind of bigotry.

I'm very happy that I don't see much of this kind of behavior in our region of the country, and I'm equally happy to spend most of my time operating CW where, for whatever reason, very little of this goes on.

My advice to anyone confronted with this attitude...turn the dial, walk away, find someone else to talk to. The majority of people and hams are decent, respectful, friendly people...it's just that the "others" stand out. Most don't care what your class is...and those who do simply don't count.

|>You may be walking a fine line on Part 97.
|>- One way transmissions I don't beleive are allowed per Part 97.

This has been discuss at length in r.r.a.p. There is no one way communication taking place here over an amateur frequency. Each end has a WA4DSY modem and would be transmitting.

|>- If you are receiving signals in return, they must be from licenced
|> amateurs for that band (ie. packet)

Again, the message content is third party traffic. The two ends of the link can both be controlled by a single operator. If he reads e-mail message sent from someone on a system somewhere on the Internet, the e-mail is third party traffic and the communication is still amateur station to amateur station. This is how NTS traffic is handled on the packet networks today. In his proposed system, he would be the first and second parties, and the originator of the e-mail would be the third party.

|>- Only conducting 5% business is like being a 'little bit pregnant'

This is the only problem with his proposed link.

|>- The UHF link is being used to evade ISDN phone line charges.

So what? That stipulation was removed from Part 97 some time ago.

Please state the Part 97 paragraphs that points 1,2, and 4 violate?

>You may be walking a fine line on Part 97.
>- One way transmissions I don't beleive are allowed per Part 97.

Who says it would have to be one way? It could easily be full duplex.

>- If you are receiving signals in return, they must be from licenced
> amateurs for that band (ie. packet)

Not so. Autopatches are a prime example. When you make an autopath, the person on the phone end doesn't necessarily have to be a ham. They take on the repeaters callsign instead. You could imbed an IDer into it, or somehow integrate a CW id'er into both transmissions.

>- Only conducting 5% business is like being a 'little bit pregnant'

Oh yeah, I agree with that one..

>- The UHF link is being used to evade ISDN phone line charges.

Autopatches are used to evade Cellular, and after all, this is a hobby where we are allowed to experiment, right? Why shouldn't we set something like that up. We have several 1200 and 9600 internet connections up here, but it's just way to slow.

It really is a matter of getting the bandwidth to use.

>Peter Q. George (N1GGP) ex. KA1NHJ

Well, that shows you what kind of hams they are...
The no-code license didn't even exist until somewhere in the N1Jxx range.

No problem with the no-code newbies here. Many of them are better VHF operators than many of the old timers in my area. It's not uncommon around here for someone with an obvious, um, "aged", voice to break in with an obnoxious comment, key over someone else, no ID, won't answer when challanged, etc. etc.

Besides all that, it seems to me that the VAST majority of no-code techs just want to get on packet, anyway, and are never heard on the air (can you tell I'm not really into packet?)

: Hi,

: I'm not sure of the legality of this, but then I'm not sure of anything...

Not a one-way transmission. Two licensed ham stations are involved - the transmitter, the aircraft that ID's with your call, and the receiver, you on the ground. The intended receiver of the signal is a ham station, not the general public.

By the previous posters logic a remote receiver for a repeater is a one way transmission.

>In article <D4x6x4.20B@world.std.com> drt@world.std.com (David R Tucker) writes:
>>Of course you know that the rules also say that no provision of part
>>97 prevents the use of any means needed to get help in an emergency.
>>(97.405)

Actually, it says "No provision of these rules..." It does not specify
whether "these rules" means part 97, or all of Title 47 of the CFR, or
only the subparagraphs of 97.405.

>Yes. It waives any Part 97 penalties for such activity. It does not
>*authorize* activities contrary to other parts of the rules, or
>contrary to other laws that may apply. Amateurs are interpreting
>this rule section incorrectly when they assume it means a pro-active
>authorization to operate anywhere in an emergency. It only waives
>Part 97 penalties for operations that would otherwise be violations
>under Part 97, such as running excessive power for example.

That's your interpretation. And your statement that differing
interpretations are wrong is an opinion.

>>If there's any provision of the rules that says an amateur station
>>must stay within amateur bands during a dire emergency that isn't
>>"escaped out" by 97.111 and 97.405, I wish someone would point it out.
>
>As noted above, Part 97 regulations only apply to Part 97 operations.
>If you aren't operating under Part 97, then Part 97 rules don't apply.

I've said this before: Part 97 is just that - part of a larger body of rules.
Why can't the phrase "these rules" in 97.405 refer to all of Title 47 of the
CFR?
It would be rediculous to say that 97.405 only applies to the subparagraphs
of 97.405, so why do you say that part 97 regulations only apply to part 97?

>Once you move off of Part 97 authorized frequencies, you are no longer
>operating under Part 97, and Part 97 rules do not apply.

Ah, but by one interpretation of 97.403 and 97.405, those frequencies *are*
allowed during these exceptional circumstances, and under these circumstances
they *are* part 97 authorized frequencies, so part 97 does apply. (How's
that for some circular reasoning!)

Now the wrong judge and a bad lawyer may cause you some grief with this
interpretation, but it's not as cut and dried as you are saying, Gary.

>I ONLY SPEAK FOR ME
>

Hi Alex,
RF PARTS has the U309 (I just bought 5 of them!) and J310. Here's
their address:

RF PARTS
435 South Pacific St
San Marcos CA 92069
ph. 1-800-737-2787 (orders)
1-619-744-0750 (technical)

This is an excellent outfit and I have been doing business with them for
years. There are quite a few hams that work there; they have an exhibit
at Dayton each year.

In my latest catalog from them, the J310 is 95 cents and the U309 is 3.95.

Give them a call and they will send a free catalog.

73, Zack W9SZ

>In any of those cases, height will solve the problem, antenna gain alone
>probably will not. I'll stand by my advice to get a topo map and find out
>why you aren't getting normal free space response at the second location.

The original poster asked about a a high-gain antenna for his
portable. A good antenna on his roof would most likely be the best
solution but if he doesn't want to spend the extra cash and likes
portability, I still think the AEA is the way to go. I disagree that
"antenna gain alone probably will not" solve the problem, especially if
he hits the repeater just fine a mile away. From inside my apartment,
I can't hit our local repeater with my rubber duck but my AEA Hot Rod
OR my discone (mounted on my second floor ceiling) works just fine.

: Originator: jbadger@poplar110

: For some time now I've enjoyed listening on an old sony sw receiver I have
: and on my scanner (mostly 2m/70cm). I've finally decided to go for my novice
: and tech licenses (yes, I plan to learn code AND use it). I've got some first
: radio questions for the experienced hams out there.

: Bill Welsh W6DDB said in CQ (Mar. 95), "Tranceivers are primarily designed to
: provide mobile voice communications; they are not primarily designed to provide
: code (A1A radiotelegraphy) communication capability." I can understand why he
: says this after reading his explanation of VOX controls when using CW but He
: goes on to say that most transceivers are never mounted in a vehicle.

: Well, I'm confused! What is a beginner to do if he's interested in DX on both
: CW and voice?

A number of people do operate mobile CW. BUt Bill is right, most radios
aren't mounted in vehicles, just as most sport utility vehicles never
travel on muddy dirt roads. But, like those vehicles, most can actually
be used for mobile service without doing anything special.

: 1. It looks like the most affordable (new) pre-fab equipment is 2m and dual-band
: HT's but 2m seems rather limited to me. Isn't 2m mostly local, short-range comm
: thru local repeaters? (I have heard locals trying DX when conditions permit,
: mostly late at night)

Actually, if you run 100 watts to a beam in a nice spot and run SSB/CW,
a range of a few hundred miles isn't unusual. With a good opening, ranges
of 700 miles or even more isn't unusual.

: 2. Would it be wise to start out with a full coverage rig (160-10 meter, new
: or used) or something simpler. I'm willing and capable of trying my hand at
: building some of my equipment but don't know what the investment in test
: equipment would be(?).

Building your rig is great for learning about electronics. If money is
scarce, the way to go is a used rig. Most homebrew gear has little
resale value.
:
: 3. What about VHF/UHV operation with transverters? Are these still used?

Yes, Down East Microwave and SSB Electronics still make them.

: 4. What about 6 meter operation? I've noticed that several manufacturers are

6 meters is a fun band when its open. Boring when its not.
Unfortunately, its closed a lot and predicting openings is difficult.

: offering 160-10+6m equipment lately.
:
: 5. What about o/p power? Does lower freqs neccessarily mean higher power
: requirements?

No. The desired reliability determines the power required. On 7 to 28 MHz, you can work 1000s of miles with a few milliwatts, if you are extremely patient. On 160 meters, the band is noisier and antennas are generally worse, so you may need as much as 1/3 watt to work that 1500 mile path.

I bought 50 of the Motorola J310s from Hamilton/Hallmark for $17.00
last year (i.e., $.34/ea). If the $50 minimum order doesn't stop you,
like you need to order some other kinds of parts, going to a
distributor can be a really good deal.

In small quantities, RF Parts in San Marcos, CA, is a good
source, though they want $1 for the J310.

You may find that reflex touch typing is different from regular touch
typing because the conscious mind is completely short circuited. You'll
have no idea what you've typed until you read the text later. There is no
cognitive delay involved with reflex action. It's worked for others with
ADD. At least give it a try, you might be surprised.

SHUTTLE AMATEUR RADIO EXPERIMENT (SAREX) BULLETIN
JANUARY/FEBRUARY 1995

For More Information Contact:
American Radio Relay League (ARRL)
Educational Activities Department (EAD)
225 Main Street
Newington CT 06111-1494 USA
Telephone (203) 666-1541

FREQUENTLY ASKED QUESTIONS ABOUT SAREX-

WHAT IS SAREX?

With the help of Amateur Radio clubs and ham radio operators, astronauts have been speaking over the ham airwaves while in orbit. They are talking directly with large groups of the general public, showing teachers, students, parents and communities how Amateur Radio energizes youngsters about science, technology, and learning. The program is called SAREX, the Shuttle Amateur Radio EXperiment.

NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly youngsters, in technology and the US space program with the help of Amateur Radio.

During a SAREX mission, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

WHO SPONSORS SAREX?

The American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and NASA sponsor these exciting experiments. AMSAT volunteers support all technical operations for SAREX, and mentor participating school groups. The ARRL provides the Amateur Radio community with SAREX information and educational support. The ARRL Educational Activities Department (EAD) and NASA Headquarters create and distribute SAREX lesson materials and resources for teachers. SAREX is supported by the Federal Communications Commission (FCC).

Hundreds of Amateur Radio operators work behind the scenes, including those from NASA's Amateur Radio clubs at the Johnson Space Center, Marshall Space Flight Center and Goddard Space Flight Center.

A SAREX Working Group was created to administer the program. The working group is comprised of Roy Neal, K6DUE -Chairman; Rosalie White, WA1STO -ARRL; Frank Bauer, KA3HDO -AMSAT; and Lou McFadin, W5DID -NASA Johnson Space Center.

I AM A SCHOOL TEACHER--HOW CAN I GET STARTED?

Schools wanting to make a scheduled SAREX contact with the astronauts are required to submit proposals and a SAREX school application to ARRL.

While only a handful of schools get chosen for scheduled contacts, all schools can participate by eavesdropping, or by trying to make a random contact with the shuttle astronauts. SAREX lesson materials are available from ARRL for all schools who participate. Imagine listening in on the astronauts from your classroom! If you are a school teacher, but you are unfamiliar with ham radio, you can still become a part of SAREX in your school. Contact the ARRL EAD to get a list of your local Amateur Radio clubs to assist you.

If you are a parent, grandparent and/or a ham radio operator, contact ARRL EAD and a local school. EAD will send you materials, including ways to convince teachers and school administrators that Amateur Radio is an important discipline the school should take advantage of on a full-time basis. This is a tremendous opportunity for you to showcase SAREX and Amateur Radio to kids of all ages in a big way.

HOW DO I SUBMIT A SAREX SCHOOL APPLICATION FOR A SCHEDULED CONTACT?

If your school is interested in a radio contact for a future SAREX mission, you must complete a SAREX school application and write an educational proposal. ARRL collects applications and proposals, and then forward them to the SAREX Working Group who makes the final selection in collaboration with the astronauts. All grade levels and type of schools (rural, suburban and particularly urban) are encouraged to apply.

SAREX school applications are available by sending a business-sized self-addressed stamped envelope to ARRL, or email your request for an electronic version of the application to ead@arrl.org. Applications may be returned to ARRL by mail or email.

A proposal must accompany all completed applications. The SAREX Working Group and NASA want to know-
1) How will you:
a) integrate this activity into the school curriculum and

b) involve as many students as you can, participating through essay contests, poster drawing, letter writing, etc.
2) What are your capabilities for setting up all necessary Amateur Radio equipment and antennas? Do you have the resources of an experienced group of hams to assist you?
3) How will you get as much media coverage as possible?

HOW WILL I KNOW IF MY SCHOOL HAS BEEN SELECTED TO PARTICIPATE?

Schools that have been selected for scheduled SAREX contacts are contacted by a SAREX coordinator. NASA requires school selections to be made approximately seven months prior to launch. If a school is not chosen for the next SAREX mission, its application is recycled for future opportunities. Schools typically wait one year or longer to be selected.

I AM A HAM. HOW CAN I INTRODUCE SAREX TO MY SON OR DAUGHTER'S SCHOOL?

Establish a SAREX station at the school. Bring in a shortwave receiver and let students eavesdrop on amateur retransmissions of the NASA shuttle-to-mission control audio--from launch to landing. Then, set up a 2-meter satellite ground station and attempt a random SAREX contact from the classroom. The teacher may even apply for a school contact, almost guaranteeing that the students will have an opportunity to communicate with the shuttle crew during a future SAREX mission.

ARE THERE VIDEOS AVAILABLE ON SAREX?

The ARRL Educational Activities Department has videos available for school teachers to borrow. Use of the Audiovisual Library is free, the only cost being return shipping.

"Ham Radio In Space" is a 30-minute color video chronicling the participation of schools and hams in SAREX. You and your class will enjoy watching students talk to the astronauts via ham radio as they participate in this unique educational program. To borrow a copy of this video, mail a postcard with your request to ARRL EAD. Borrowers, please indicate the date you will need the video. Requests should be made at least one month in advance.

CAN A HAM MAKE AN UNSCHEDULED SAREX CONTACT?

Yes. The astronauts have not lost sight of why SAREX has been so successful. It is the Amateur Radio community that has brought the astronaut's voices into classrooms all around the world. During most SAREX missions, many of the crewmembers will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world. On many missions, they have even carried a 2-meter packet radio station. Innovative computer software allows the crew to operate the packet gear in an "unattended" mode, allowing amateurs to make contacts with the ROBOT station when the astronauts are working or sleeping.

WHAT TYPE OF EQUIPMENT DO I NEED?

A typical SAREX ground station includes a 2-meter FM transceiver and 25-100 watts of output power. A circularly polarized crossed-Yagi antenna capable of being pointed in both azimuth (N-S-E-W) and elevation (degrees above the horizon) is desirable, but successful contacts have even been made with verticals and groundplane antennas. Commercial and public domain computer tracking software is available to assist you in determining when the shuttle will be within range of your station and where to point your antenna. For more information on assembling your own satellite/SAREX station, obtain a copy of the "Satellite Experimenter's Handbook" from ARRL.

HOW DO I "TALK" TO THE ASTRONAUTS?

You may communicate with the shuttle astronauts using a variety of modes: voice, packet (computer) radio or television. It all depends on which equipment configuration the astronauts take into space. For example, astronauts Jay Apt and Mamoru Mohri made hundreds of random voice contacts with Amateur Radio operators during STS-47 in September 1992. When the astronauts were sleeping, however, a robot computer ham station aboard the orbiting Shuttle automatically made contact with hundreds more amateurs around the world. The robot computer transmitted an acknowledgment to each ham whose computer successfully made contact with it.

On other missions, the SAREX configuration has even included Amateur Radio Slow Scan Television (SSTV) and Fast Scan Television (FSTV) allowing amateurs a firsthand glimpse at life in space.

WHAT ARE THE SAREX RADIO FREQUENCIES?

The following VHF frequencies are used for SAREX missions. These frequencies were chosen after much deliberation to minimize contention between SAREX operations and other 2-meter users. If you have any comments, please direct them to AMSAT via Frank Bauer, KA3HDO (at his address in the "Radio Amateur Callbook") or the ARRL EAD. We appreciate the cooperation of all amateurs in making the SAREX operations successful.

Most SAREX operations are split-frequency (the crew uses separate receive and transmit frequencies). PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency. For all operations, Earth stations should listen to the downlink frequency and transmit on the uplink frequency only when the shuttle is in range and the astronauts are on the air.

FM Voice Downlink: (Worldwide) 145.55 MHz
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz
FM Packet Uplink: 144.49 MHz

ARE ALL OF THE CONTACTS MADE BY THE ASTRONAUTS RANDOM?

During each SAREX mission, the astronauts' primary work schedules dictate when they can and cannot operate the radio equipment. As a result, most of the general contacts they make are random. If the astronauts are operating their radio, however, you can be certain that many hams will be attempting to contact

them.

WHAT ARE MY CHANCES OF MAKING A RANDOM SAREX CONTACT WITH THE CREW?

The extremely busy work schedules of the astronauts may sometimes reduce your chance for an unscheduled, random contact with the Shuttle. The SAREX Working Group recognizes the long-standing commitment of the Amateur Radio community in supporting SAREX activities and attempts to schedule as many opportunities as possible for general ham contacts during flights. Keep posted to Amateur Radio news sources during a SAREX mission for possible announcements of scheduled general QSO opportunities.

WHEN ARE THE NEXT SAREX SHUTTLE MISSIONS?

The next flights for SAREX are listed below. School applications are no longer being accepted for these missions. Schools who have been selected will be contacted by a SAREX coordinator. If your school was not chosen this time, applications are recycled and you may be chosen for a future flight. Contact ARRL EAD if your application information should change.

Upcoming SAREX Missions (updated 2/1/95):

The following dates are tentative. Please understand that delays in spacecraft launches are somewhat common particularly because there are people on-board!

HOW CAN I USE MY SHORTWAVE RADIO TO EAVESDROP ON THE ASTRONAUTS?

When a shuttle mission carries the SAREX payload, SAREX news and astronaut retransmissions are carried by the Goddard Amateur Radio Club's station, WA3NAN, (Greenbelt, MD). This station, and several VHF and UHF repeater groups, will retransmit the audio signals from the shuttle on most amateur bands so that you and the students can hear the communications. You will hear NASA mission commentary, frequent bulletins to advise listeners of astronaut-planned transmissions, and amateur two-way voice and amateur television transmissions with the shuttle. WA3NAN operates on the high frequency (HF) bands at 3.86, 7.185, 14.295, 21.395, and 28.65 MHz and on VHF at 147.45 MHz (FM).

CAN I RETRANSMIT COMMUNICATIONS BETWEEN THE SPACE SHUTTLE AND MISSION CONTROL ON AMATEUR FREQUENCIES?

The FCC rules indicate that amateur stations are permitted to retransmit Space Shuttle air-to-ground communications, provided that approval has been obtained from NASA (FCC Rules, Part 97.113 (e)).

In 1990, ARRL sought permission from NASA, on behalf of radio amateurs, to retransmit shuttle communications. The response from NASA's Office of Public Affairs encouraged such retransmissions, and indicated that the audio is public domain.

If you plan to rebroadcast NASA Shuttle audio, please follow these guidelines:

1) In keeping with good amateur practice and the FCC rules, shuttle audio retransmissions should be limited to missions of a specific educational purpose (non-commercial), such as those carrying the SAREX payload.

2) Retransmissions should be done manually (with a control operator present).

3) Occasionally, NASA audio may contain music. Amateurs should avoid, if at all possible, retransmitting music or any other prohibited transmissions not permitted by the FCC rules (FCC Rules, Part 97.113).

HOW MAY I TRACK THE SHUTTLE WITH A COMPUTER?

A number of software packages are available for tracking the Shuttle on a personal computer. Here are just a few options (ARRL in no way warrants these products):

AMSAT Tracking Programs.
These easy to use programs are perfect for the serious Amateur Radio space enthusiast or beginner. Call AMSAT (The Radio Amateur Satellite Corporation) for current prices and details (301) 589-6062 or write to AMSAT, PO Box 27, Washington DC 20044.

STSPLUS (Shareware for IBM).
This software was designed by David Ransom Jr. The program allows the user to track an orbiting space shuttle or satellite. Excellent graphics and maps help to create a mock Mission Control Center. Look for STSPLUS and other tracking software posted on NASA Spacelink, bulletin board system (205) 895-0028.

OrbiTrack (MacIntosh).
Available from BEK Developers, PO Box 47114, St. Petersburg, FL 33743-7114. Includes a user's manual.

SatTrack (MacIntosh).
Available from Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

OrbiTrack and SatTrack are also available via FTP from sumex.stanford.edu. Look in info-mac/app for the programs sat-trak-102.hqx and orbitrack-214.hqx.

WHAT ARE KEPLERIAN ELEMENTS?

Satellite-tracking computer software use Keplerian elements (also known as "orbital" or "tracking" elements or "Keps") to pinpoint the location of a satellite (or shuttle) at any given time. The Keplerian elements provide the software with a snapshot of a satellite's orbital track, which the computer uses to calculate the future whereabouts of the satellite. Using such a computer tracking program allows an observer to determine when a satellite is to appear above his or her horizon.

Finding Keplerian Elements for the Space Shuttle:

During shuttle missions carrying SAREX, Keplerian elements for tracking the shuttles are available from numerous sources:

AMSAT SAREX bulletins, which include daily Keplerian element postings, are forwarded by W1AW (frequencies listed on the last page) on packet radio, Keplerian teleprinter bulletin schedules, and posted to the ARRL telephone

Bulletin Board System, (203) 666-0578.

The Goddard Amateur Radio Club, WA3NAN, maintains a Bulletin Board System (BBS) which is accessible via the Internet, modem and packet radio. The BBS carries Keplerian orbital elements updated daily, and daily SAREX bulletins and Space Shuttle mission information.
via Internet: wa3nan.gsfc.nasa.gov or 128.183.105.17
via telephone modem: (301) 286-4137
via packet radio: WA3NAN on 145.090 MHz in the DC area.

NASA maintains an electronic information system for educators called Spacelink. Spacelink carries SAREX information, current shuttle mission status reports and Keplerian elements.
via telephone modem: (205) 895-0028
via Internet: spacelink.msfc.nasa.gov or 128.158.13.250
Current shuttle mission tracking elements may be found in the following directory:
Spacelink.Hot.Topics/Current.Shuttle.Mission/Keplerian.Elements.

The Johnson Space Center Amateur Radio Club maintains a BBS with the latest element sets available during a shuttle flight.
via telephone modem: (713) 244-5625.

The most current orbital elements for SAREX and other Amateur Radio satellites are carried on the Celestial BBS.

NASA EDUCATIONAL RESOURCES

How do you find information on Shuttle schedules, payloads, space science and mission lesson plans? To make the most of your SAREX experience, NASA has a number of materials and resources available to educators:

Teacher Resource Center Network
Teacher Resource Centers (TRC) contain a wealth of information for educators: publications, reference books, slides, audio cassettes, videocassettes, telelecture programs, computer programs, lesson plans and activities. For more information, contact the TRC nearest you.

Teacher Resource Centers

NASA Ames Research Center, Moffett Field CA
Phone: (415) 604-3574

NASA Goddard Space Flight Center, Greenbelt MD
Phone: (301) 286-8570

NASA Spacelink

NASA Spacelink is a computer information service that allows individuals to receive news about current NASA programs, activities, and other space-related information, including historical and astronaut data, lesson plans, classroom activities, and even entire publications. Although primarily intended as a resource for teachers, anyone with a personal computer and a modem can access the network.

Spacelink's telephone modem line is (205) 895-0028. Users need a computer, modem, communications software, and a long-distance telephone line to access Spacelink (the data word format is 8 bits, no parity, and 1 stop bit). Your software must emulate a VT-100 terminal.

The TCP/IP address is 192.149.89.61. The new system fully supports the following Internet services:
World Wide Web http://spacelink.msfc.nasa.gov
Gopher spacelink.msfc.nasa.gov
Anonymous FTP spacelink.msfc.nasa.gov
Telnet spacelink.msfc.nasa.gov

For more information, contact the Spacelink Administrator, NASA Marshall Space Flight Center, Mail Code CA21, Marshall Space Flight Center, AL 35812. For help with technical problems call the Spacelink Hot Line (205)961-1225.

NASA Television

NASA Television offers the general public a front-row seat at mission launches and activities taking place in space during a mission, as well as informational and educational programming, historical documentaries, and updates on the latest developments in aeronautics and space science. NASA TV occasionally airs live coverage of SAREX activities. Programming is received by satellite dish or may be available through your local cable television network:

TUNING-IN NASA TV
Satellite--Spacenet 2
Transponder--5
Channel--9
C Band
69 degrees west longitude
Frequency 3880.0 MHz
Horizontal polarization
Audio on 6.8 MHz

For more information, contact: Technology and Evaluation Branch, Education Division, Code FET, NASA Headquarters, Washington D.C. 20546, or call (202) 358-

1540.

HOW DO I OBTAIN A SAREX QSL CARD?

QSL cards are similar to postcards. Hams exchange QSL cards to confirm their radio contacts with other stations.

Participating in the Shuttle Amateur Radio EXperiment can be an exhilarating experience. But, as many hams know, waiting for that coveted QSL card requires a lot of patience. Designing a card for the ultimate DXpedition can be a lengthy process. Here's a behind-the- scenes glance at producing a SAREX QSL, and some tips to help you get your card.

After a SAREX mission, ARRL and the SAREX Working Group work with the crew members to select photos from that mission, and design and layout the QSL card. This may take a few months because of the busy schedule of the astronauts, among other things. Once the card is designed and printed, ARRL forwards the QSL cards to whichever Amateur Radio club is involved with the awesome task of managing the cards.

In the past, amateurs sent their contact and listener reports directly to the managing club. Now, all reports should be sent to ARRL Headquarters.

In order for the managing process to run smoothly, please include the following information in your QSL or report: Shuttle flight number (STS-XX), date, time in UTC, frequency and mode (FM voice, packet, sstv or fstv). This documents the contact or listener report. In addition, you must also include an SASE using a large, business-sized envelope if you wish to receive a card. No cards are distributed without the proper postage affixed or sufficient IRCs included.

The following clubs have graciously volunteered their service for handling QSL cards for the following missions:
STS-67 Edison Radio Amateurs Association, Michigan
STS-64 Nashua Area Radio Club, New Hampshire
STS-65 Lake County Amateur Radio Club, Indiana
STS-59 Orange Park Amateur Radio Club, Florida
STS-60 Cowley County Amateur Radio Club, Kansas
STS-58 Connecticut DX Association, Connecticut
STS-57 Miami County Amateur Radio Club, Ohio
STS-55 IBM Amateur Radio Club/1993, Florida
STS-56 Vienna Wireless Society, Virginia

Getting Started In Amateur Radio:

"You're Invited...Getting Started in Amateur Radio"--free information booklet. Provided as a service of the ARRL, this booklet includes information on your local Amateur Radio clubs, instructors and examination sites and popular study guides. Call our toll-free hotline for new hams: 1-800-32-NEW HAM (800-326-3942). Why not get started, today!

"Now You're Talking!" book (second edition) contains everything you need to know to pass your first Amateur Radio written exams. (ARRL order #3525 $19)

ARRL Technician Class Video Course. Learn the "ropes" with the "pros." You won't find a better course or a better deal anywhere. 5 hours of excitement. Call 1-800-326-3942 for details.

ARRL Books:

"The Satellite Experimenter's Handbook" has the information you need to communicate through, or receive signals from, a growing "fleet" of orbiting satellites and spacecraft--including the Shuttle! Whether your interest is in Amateur Radio, weather, TV-broadcast or other spacecraft, you'll find an immense store of valuable data--everything from setting up ground station equipment to antennas. (ARRL order #3185 $20)

"Your Packet Companion" is perfect for the packet (computer) radio newcomer, covers everything--from assembling a station to sending mail, from packet satellites and spacecraft to the latest networking systems. Its straightforward writing style and clear drawings will get you on the cutting edge of digital ham radio in no time. (ARRL order #3959 $8)

SHUTTLE ENDEAVOUR ASTRONAUTS TO SPEAK WITH STUDENTS VIA AMATEUR RADIO.

With the help of Amateur Radio clubs and ham radio operators, astronauts have been speaking over the ham airwaves while in orbit, as part of the Shuttle Amateur Radio EXperiment (SAREX). During mission STS-67, the crew will be talking directly with large groups of the general public, showing teachers, students, parents and communities how Amateur Radio energizes youngsters about science, technology, and learning. Amateur Radio has been flying aboard the shuttles since 1983.

WHEN: Launch is scheduled for March 2, 1995 at 1:37 AM EST (0637 UTC) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for March 18, 1995 at 3:09 PM EST (2009 UTC) at the Kennedy Space Center, Florida. 15 day mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 218 miles and an inclination of 28.45 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly youngsters, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

AMATEUR RADIO-LICENSED CREW MEMBERS:
Stephen S. Oswald, Commander, call sign KB5YSR
William G. Gregory, Pilot, call sign KC5MGA
Tamara E. Jernigan, Payload Commander, call sign KC5MGF

Wendy B. Lawrence, Mission Specialist, call sign KC5KII
Ronald A. Parise, Payload Specialist, call sign WA4SIR
Samuel T. Durrance, Payload Specialist, call sign N3TQA

PAYLOAD: Primary Payload--ASTRO-2. ASTRO-2 is the second in a series of ASTRO missions that will make precise measurements of astronomical objects such as planets, stars, and galaxies, in relatively small fields of view. Consisting of a variety of instruments, the payload will provide stability for extended periods and highly accurate instrument pointing of 1.2 arc seconds. The ASTRO observatory is a key element in the Spacelab program. (Information provided by the NASA Public Affairs Library Staff.)

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crewmembers will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world. On many missions, they have even carried a 2-meter packet radio station. Innovative computer software allows the crew to operate the packet gear in an "unattended" mode, allowing amateurs to make contacts with the

ROBOT station when the astronauts are working or sleeping.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: (Worldwide) 145.55 MHz
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz
FM Packet Uplink: 144.49 MHz

CALL SIGNS:
FM voice call signs KB5YSR, KC5MGA, KC5MGF, KC5KII, WA4SIR, and N3TQA
FM packet call sign W5RRR-1

QSL VIA: Send reports and QSLs to ARRL EAD, STS-67 QSL, 225 Main Street, Newington, CT 06111, USA. Include the following information in your QSL or report: STS-67, date, time in UTC, frequency and mode (FM voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Edison Radio Amateurs Association in Detroit/Edison MI has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the NASA Spacelink computer information system, BBS (205) 895-0028 or via Internet spacelink.msfc.nasa.gov, and the ARRL BBS (203) 666-0578. Also, the JSC ARC BBS will have the latest element sets available during the STS-67 flight. The number is (713) 244-5625, 9600 baud or less.

The following are prelaunch Keplerian elements for STS-67:

STS-67
1 00067U 95061.32643015 .00011689 00000-0 86071-4 0 46

Epoch rev: 2
Checksum: 304

CONFIGURATION: During STS-67, the SAREX hardware will be carried in configuration C. SAREX configuration C consists of the handheld transceiver, I/F module, PGSC, spare battery set, window antenna, packet module, SAREX headset

assembly, personal recorder, and the required cable assemblies. The packet module contains a power supply and packet TNC. The power supply provides power for the TNC and the handheld transceiver. The TNC interconnects with a radio transceiver so that data to and from the computer is transmitted to and received from other amateur radio stations. Configuration C is capable of operating in either the voice or data mode in communications with amateur stations within LOS of the Orbiter. This configuration can be operated in the attended mode for voice communication and either the attended or automatic mode for data communications. The payload control weights is 45 lb (20.41 kg).

>
Right on, Gary. It would appear to me that the gentleman *is* using
the repeater for business purposes -- coordinating rides might just as
well be done by CellPhone, for instance. I agree with you that yammering to
the telephone company about the machine not being used for business
purposes will get the writer exactly nowhere.

In addition, I fail to see why a blind person should get any more of a break respecting what he must pay for his essential services than anyone else. I am blind; society doesn't owe me (or any other blind person) a break because of that fact anymore than it owes the bald a break!

Furthermore, claiming that the blind gentleman should pay residential rates because he's blind and needs special services is harmful in two ways: (a) it isn't so and (b) it contributes to the stereotype of the blind as witless and helpless.

I think Gary's suggested line of attack (citing tariffs) is far more productive and is far more likely to gain the desired result.

2904. Kenwood Dual-band Mobile Rig

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-07 16:58:30 UTC
From: mikef@pacifier.com
Message-ID: <3ji3bm$j8g@pacifier.com>
Source record: 251274

Hello, Netland.

Back in the early '80's (1983-1984), Kenwood manufactured a dual-band (2-meters/70-centimeters) FM mobile rig. It had a voice board such that all its functions including frequency readout could be spoken.
I believe it had an output power of 25 watts or so. Seems to me the rig was known as the TW-something-or-other {grin}. Can't remember the model number.

In fact, that's what I am asking: does anyone remember the rig's designation? Anyone know if those rigs come on the swap market (with voice board) and if the rig includes PLL-decoding (it wasn't so important back in 1984 so don't remember).

Thanks in advance.

suggs@tcville.es.hac.com "Brian Suggs" writes:

> Actually, it says "No provision of these rules..." It does not specify
> whether "these rules" means part 97, or all of Title 47 of the CFR, or
> only the subparagraphs of 97.405.

Nice try but if you read it from end to end, the term "these rules" is
applied with consistancy to the rules of Part 97. Elsewhere in Part 97,
reference is also often made to "FCC Rules" and rarely to "FAA Rules".

The key to being a good jailhouse lawyer is first to study the text.

The term "these Rules" is used in connection with transmission for hire,
protection of life and property and distress signals, amongst others.

Perhaps you might find the most convincing us of the term in:

97.521 VEC qualifications. - No organization may serve as a VEC
unless it has entered into a written agreement with the FCC. The VEC must
abide by the terms of the agreement. In order to be eligible to be a VEC,
the entity must:

(d) Agree to assure that, for any examination, every
examinee qualified under these rules is registered without regard to race,
sex, religion, national origin or membership (or lack thereof) in any
amateur service organization;

If you feel that VECs examine rules less broad or more broad than all
sections of Part 97 and only Part 97, please tell us more.

73.

>about beeps and I don't get anything like what it says.

You may simply be scanning a repeater which doesn't transmit
the CTCSS tones even though it needs them for access. On my FT530,
it will actually stop scanning, and beep when it finds a match. And
of course, you hear the transmitted audio when it matches.

If the repeater doesn't output the tones, your only chance is to
try listening on the input frequency. If you can find someone near you
(so you get a strong signal) you may be able to decode the tones that
way. I have no luck with a relatively weak signal.

Good luck.

-> grounding. All of the information I have on grounding refers to towers.
-> Can someone let me know what would be the best way to ground the
-> antenna and mast?

The best thing to do is clamp a heavy gauge wire to the base of the
mast and run the wire down the side of the building to an 8 Foot copper
grounding rod driven 7 feet into the earth. Use nothing less than an 8 foot
rod if you can help it. If a rod can not be driven into the ground a
"COLD" water outdoor faucet can be used as a very last resourt.
Remember, grounding a mast (or antenna) is done to attract and discharge
lightening "BEFORE" it gets to the point of hitting your antenna. And in
case it does hit your home, it will hopefully provide a "path of least
resistance" for the bolt to find ground and not through your rig.

2909. RailHAMS

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-07 17:12:29 UTC
From: chrisf@col.hp.com
Message-ID: <3ji45t$hs2@nonews.col.hp.com>
Source record: 251276

There has been some discussion in this newsgroup about ham radio railfans. Here in Colorado Springs, a group of us so called "RailHAMS" are looking to organize a little more. Some want to do a RailHAM net on one of the local repeaters. Is there much of this going on elsewhere in the U.S. and Canada? If so, how are you organized? What kind of events are you running? I'd like to trade ideas that work.

There are a lot of "RailHAMS" in the Colorado Springs/ Denver/ Cheyenne corridor. We occasionally organize to go up and chase Union Pacific's 3985 or 844 or the E-units 949 and 951 in Wyoming. When they run from Cheyenne to Laramie and back, we have 2 meter communications almost all the way be- between RailHAMS. On top of Sherman Hill is a repeater (146.820-) that works great. Last year we had a RailHAM on the train. Nothing works better for setting up your chase and photo stops than a RailHAM on board working that repeater. In the Colorado Springs/Denver area, RailHAMS tend to be found monitoring the 146.970- (wide area coverage) repeater. I spoke to a RailHAM in Laramie once that was pretty heavy into the hobby. His Ford Bronco had at least six antennas on it. CB, 2m, wide-band scanner, HF?, plus others I couldn't identify readily. He said that on the west coast they were establishing the 146.460 as a railfan (RailHAM) national call frequency. Out here, we decided to follow this trend and use this as our simplex call frequency too.

Railfans and RailHAMS can also be found hanging out in Palmer Lake, Colorado. This is a favorite train watching spot on the famous SF(BN)/SP Joint-line. This spot is frequented by train watchers year-round with as many as twenty vehicles parked there at one time. We've met railfans from all over the U.S. and some from Canada and Europe.

If you are ever out train watching in our area, try using the suggested "KBxxxx monitoring for trains" or "KBxxxx RailHAM", or something. Maybe this is an opportunity to establish a standard. This newsgroup would be the best place to start. Maybe put out a call for suggestions?

[flamage deleted]

Leave your terminal unattended, did you, Gary? I'll bet you
got a lot of email on this one. Especially the part about code-copying
ability being an idiot-savant talent. That is the tipoff that that
post from your account was the work of a non-technical person.
The know-nothings from the touchy-feely side of the campus love to
insinuate that anyone with a technical skill must be an idiot-savant.
In this case, though, the joke is on him because code is not really a
technical skill but merely a conditioned response, and it doesn't take
an idiot-savant to learn it. Even a psychology major could do it,
given the motivation.

Anyway, I hope that not too many of the people here who have taken
the trouble to learn the code were offended by being called idiots.
Surely they recognized that that was not the real Gary talking.

From: "Walter A.Franck"
Message-ID: <3ji4gm$cuq@news.rwth-aachen.de>
Source record: 251081

Hi,

does anyone know the history of software changes in the EPROM
(IC-52 of control unit) of Kenwood R-5000 Rx ?

Running in trouble with controlling my Rx via IF232-interface
and a PC, the old EPROM (part number MBM27C128-25JA1 from
1980 or earlier) was changed by a new one (part# ...-25JAI3 !)
in 1995. All seems to be ok.

Which other bugs are eliminated in 15 years ?

Thanks in advance

If you wish to trade a bit of gain for a more robust antenna, may
I suggest the Larsen Kulduckie? It's a base-loaded whip, about a foot
in overall length, half of which is the base load/rubber duck and the
other half is a flexible radiator (which may or may not be helical).

About $20, as I recall, and much better gain than a rubber duck. As
to longevity, I have had mine for about 10 years and the only damage
it shows is a split in the heat-shrink wrap over the coil, which
was easily cured by sliding a piece of heat-shrink tubing over the
problem area.

Rich,

I have worked and successfully QSLed several S5 stations, so if
you need info on how to do that send me some e-mail. I have current Callbooks,
the Go-List, plus other DX QSL routing sources and would be happy to help
out a "newbie" DXer.

BTW, try 30 meters in the late afternoon and early evening; it's a good
band to work some of the new European countries like Slovenia, Croatia (9A),
Slovkia (OM), etc., and last night about 0100 3B8 (Mauritius Is.) was coming
through 5-8-9 into northern VA (and I only use a dipole). Oh, and that was
0100 UTC (9:00 PM EST).

Are you talking about

1) CTCSS tone scan (finding out what tone is being received)
2) DTMF paging (ring when correct 3-digit sequence rcvd)
3) CTCSS bell paging (ring when correct tone rcvd)

I've done 1 and 2 on my radio - haven't tried 3. My version of the
manual is fairly straightforward.

>and also, the one I have won't recieve anything in the 800-940mhz

From: w0uc@aol.com
Message-ID: <3ji9qb$3rq@newsbf02.news.aol.com>
Source record: 251041

Word has come down that the rules for rovers in the June VHF contest will be the same as for January. Many rovers are very upset with these rules and plan to seriously curtail their activities until a change is made. The word from Newington is that not enough input has been received at this point to merit reconsidering the matter. If you are active as either a rover OR A FIXED STATION, this subject should be of concern to you. Discussion continues on the "Rover Discussion Reflector"; join by sending a message with the single word "SUBSCRIBE" in the body to:

vhf-rover-request@eng.pko.dec.com

If you are active on VHF, your input is needed!

Since 97.403 basically states that in an emergency, any amateur
station can use any means of radiocommunication.....

and an amateur station is defined as radio equipment used in
the amateur service,

and the only frequencies we can use in the amateur service are
those which are allowed to be used by licensed individuals,

can't we conclude that we are restricted to those frequencies in the
amateur bands?

I thought that 'amateur service' was restricted to select frequencies.

Don't get me wrong, I would love to prove that it IS legal to use
any frequency at my disposal, (in an emergency), but I just don't
think it can be proven with the way the CFR is written.

What we need is an 'Official Interpretation' of the regulations.
I have been planning on doing this for about a month now, but
I can't seem to find the time (or money) to send a letter to the
FCC.
For anyone reading this, you can't just ask your local field office for an
official interpretation...I think you have to go through the
attorneys offices in Washington.

I can recommend "NuMorse" which I got from a free cover disk with "Ham Radio Today" magazine in the UK (Jan 95 Issue). It's a proper Windows program, and it works very well. It will send you either continuous random groups of characters, or will wait after each character for you to identify it on the keyboard before sending the next. This is very useful in the early stages, I'm finding. You can configure it to send any subset of the available characters, and I believe it will also do simulated QSO's, though I haven't tried that myself yet. You can set the timing, speed and almost everything else.
It's written by Tony Lacy G4AUD, who's on Compuserve 100030,157 (at least he was when he wrote the program notes in 1993), and it's shareware. It might be available by ftp - perhaps someone out there knows...?

Or you could just use the part 15 type device as your television transmitter in the 902-928 MHz band. This works fine for the nominal RC flightpath over a closed field of 1000' x 700' and it's cheap. Fry's in LA has these for under $100.

In speaking with Mr. Monte Dupont of the Wireless
Telecommunications Bureau of the FCC, I discovered that in his
opinion, which I assume is that of the whole Bureau, 97.403 means
any licensed ham can use any frequency, in any radio service, at
his disposal in an emergency. Mr Dupont saw my point about the
technical definitions of 'amateur station' and 'amateur service',
but he said that I was going overboard. Fine, I can accept that.
I hoped it was legal to use police frequencies in an emergency.

>anyone on the ham bands, and resorted to the local Sherriff's office...
>The HAM got SCREWED in the deal! He lost his radio, luckily he did not
>loose his license...

When did this happen?
Who confiscated the radio?
Was the FCC notified?
IF the FCC was notified, was it the field office, or the Washington office?
Did he attempt to get his radio back?
Was he charged with anything?
I hope you realize his radio was probably illegally confiscated,
unless he voluntarily turned it over.
What was the guy's name?
Does anyone have his phone number?

Mike:

Sounds like the TW-4000A. I have one, but without the "sound board."
I have an encode module (extra cost option, TU-40, I think) but it does
not have decode capabilities. I have seen these units at hamfests.
Mine has been well used and is still working well as a "shack" rig.

: Who's sending signals back to you when you're using a repeater's autopatch
: to call a non-ham?

Technically, under Part 97: The control operator of the repeater. The
non-ham is just talking on the phone. The control operator of the
repeater is relaying his voice to you.

Write your letters and be sure to send a copy to your local newspapers. The bad public relations will cost the phone company a lot more than they will gain from walking all over a handicapped person. The more people you can get involved writing letters the better. See if a simpathetic reporter would like to push the subject. A demonstration in front of the phone company (with news coverage) wouldn't hurt either. Rember "laugh in" "We're the phone company. We don't care. We don't have to." Make 'em care.

2940. IPS Daily Report - 07 March 95

Newsgroup: rec.radio.amateur.misc

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 MARCH AND FORECAST FOR 08 MARCH - 10 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 06 Mar
Daily Proton Fluence >1 MeV: 1.3E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.8E+07 (normal)
X-ray background: A5.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Mar 09 Mar 10 Mar
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Mar: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 06 Mar
Learmonth 6 2321 1211
Fredericksburg 4 5
Planetary 5 6

Observed Kp for 06 Mar: 2322 1221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Mar 15 Unsettled to active
09 Mar 10 Unsettled
10 Mar 25 Active to minor storm
COMMENT: IPS Geomagnetic Warning 7 was issued on 5 March and is
current for interval 7-13 March. Expected active levels did not
eventuate. Active periods maybe observed during local night tonight.
Active to minor storm levels are still expected commencing March 10.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Mar normal normal fair
09 Mar normal normal fair
10 Mar fair poor poor
COMMENT: Degraded HF comms are now not expected for today as expected
geomagnetic activity did not occur yesterday.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
07 Mar 33 10 to 15% above predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
08 Mar 30 10 to 15% above predicted monthly values
09 Mar 20 10 to 15% above predicted monthly values
10 Mar 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 6 March and
is current for interval 8-13 March. MUFs at Townsville were near
predicted monthly values.MUFs at Hobart were enhanced 10-30% at
times. HF conditions are now expected to be good for today as
forecast geomagnetic activity did not occur last night. However,
degraded comms are still expected after March 10.

>an amateur station under Part 97. Other service's rules don't apply.

But your license authorization also determines which frequencies are open to you, so an amateur station operating out of band is no more legal than if the same operation took place with no license at all!

The sheriff has no such power. Neither does the judge, unless a Federal judge.

If any such official confiscated my rig I would turn around and swear out a complaint under the Communications Act for tampering with the equipment of a licensed radio station. Frankly, I'm surprised that isn't invoked more often (such as by TV stations whose news crews are interfered with).

I haven't logged on to this newsgroup for a long time now, and
I come across this.

Without a doubt you should all be ASHAMED of yourselves. Look
at the sensless bickering and arguing. Pitifull. The lame
insults flying back and forth between the users posting here
makes me thing this is some high school forum. Sick without a
doubt. It's time to let it go people. Go on with life, all
this is now is a shouting match. No one is arguing priciple
any more.

Hope I haven't angered anyone, I just wanted to give you the
opportunity of a fresh point of view. I know for sure if I
logged on for the first time and saw this, I would cancel my
internet access in a heartbeat. It kinda reminds me of 80
meters in the late evining. Nothing but arguments and name
calling. Just pause and think about it for five seconds.

Five seconds....

2947. Re: Yaesu FT-530 Tone scan? can't get to work

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-08 01:14:17 UTC
From: camter28@astro.ocis.temple.edu
Message-ID: <3jj0d9$edk@cronkite.ocis.temple.edu>
Source record: 251073

1) CTCSS tone scan (finding out what tone is being received)

Yes, I can get the radio to tell me what tone is being used, but is not that
fast, and is not automatic.. I thought I had read somewhere that the
tone scan was automatic. I dunno.. I just bought it, and looking through
the back archives of these newsgroups, I see that it is a common
problem that has been talked about, but never really resolved..
I have to have it in full tone squelch, and then scan the tones from there..
now,, the other part, it says to to fm->0->fm->tone set (2) and listen
for the resulting beeps, if there is one beep, then the radio
is in tone scan, if two beeps then the radio is not in tone scan..
Now that makes me think, because, I can sit here and repair
a Motorola GM300 radio, but I can't understand what the hell the manual
is saying for this! I did it, and my radio dosen't even respond
with that key sequence. If I play around, and hit fm > 2 fm >2 I get a
choice to change the hang time on the ptt key which isn't even document..
(that's documented..) My fingers slipped..

IN any case, I'll call them and ask what they mean in the manual
some day, I thought someone might just know an easy answer.
The other question is if anyone that has bought recently the unit
can recieve the 800 to 940 mhz band.. Now, I don't mean get the display
to say 800 or something like that, I CAN GET the radio to start at
800 mhz and scan all the way up to 940 mhz.. but I don't get a thing.
Yes, I've tried a different antenna, I've even tried my scanner that is
sitting right next to it and found an active frequency that the Yaesu
dosen't even hear - even on full squelch... But in any case, I was
just wondering if they disconnected one of the chip pins or something,
as the mod on the Icom 2410 makes you do..

In any case.. If any one has had any experience with the above problems,
then please lemme know, and we'll get this thing modded' at some point in
time!!

: Have you done the mod to get the extended rx/tx? It won't do it out
: of the box.
Yes, i've done the mod, yes i've reset the cpu,, I know that it
won't recieve it out of the box.. Geez

Try on the FTP site FTP.FUNET.FI in the /ham/packet/bbs/f6fbb/servers
for the file KE0WODX2.ZIP. The package was meant to run on a FBB BBS as
a server, but a DOS retrieval program is included. It will take about
6MB of hard disk space once installed (this will increase if you update
the database. The .DOC files tell you how to do this).

Probably not exactly what you were looking for, but I do not know of a
QSL manager server you can telnet into on the internet.

Hello,

I need:

-The Support disk for Konan TenTime (inntelligent caching floppy/HD)
controller or

-E-mail address or FAX-nuber for Konan Corporation.
(I have the old: (602) 345-2829 was disconnected/out of order)

Thanks.

>Tech. There are many of us.
>
>Funny, I don't hear this kind of rude behavior on the Extra CW bands.
>
>Dave, N1IRZ
>
>
>

Yes, that's true; you hear a totally different type of rude behavior
on the Extra CW bands!

Listen in on a pileup (or join in) on some rare DX who is working split
(listening up a few kHz from his transmitting frequency) some time!
Invariably someone will send "CALL?" followed by a chorus of "UP UP"
which seems to invoke someone tuning right on top of the DX which
incites a chorus of "LID LID" mixed in with obscenities.

When it gets too bad I give up for a while and go get a snack!

Some of the recent ones that were really bad were VP8SGP, D2XX, SU2MT.

Oh well, it's still fun to brave the pileups most of time anyway...but
I'm just pointing this out as it seems no segment of the hobby (except
maybe VHF/UHF SSB DXing) is free of this!

I've been a ham for 27 years and have had my Extra for 23 years. It seems
this type of behavior wasn't nearly so prevalent 20 years ago.

Perhaps it's the Zeitgeist?

KI4TG has a hole saw, i think....is there enough room on the car to
have a DC to Light installation? (of course, the problem would be
where to put all the radios...) but who needs a back seat?

(poor Howie...he wants a serious answer and he gets me...)

Problem is at 5 watts the radios get very hot. The Yaesu version of the
battery eliminator is about $80 but the radio slips into it and a fan is
built in to it right behind the top rear of the radio to keep your unit
from overheating at 5 watts..

From: dkriss@moontower.com
Message-ID: <3jjcnu$5ul@beacon.moontower.com>
Source record: 251212

I have a new user question on the Yaesu FT-51R Dual-Band talkie. I use the FNB-38 (9.6 volt, 600 mAh) battery and have no idea when it is about to crap out. By using the Function-0 Option 25 command I noticed the reading starts out at about 11++ volts, then drops off to about 9.6 volts, after use. With my old FT-530 I could tell if the battery needed to be recharged when voltage started to drop below 6.0 volts and was used up at 5.5 volts.

At what voltage does the FNB-38 need to get in the charger? Also, how do you know the NC-38B Charger (one provided by Yaesu with the 51R/FNB-38) is charging? No red LED or any indicatian it is doing its thing.

>Jeff - AC4ZO

The FCC allows the control of RC vehicles in the Amateur 6 meter
band and that is a one way transmission. The thing about the TV signal
coming back from the airplane is that it is feedback for the pilot or
something like that. Besides there is nothng in the rules prohibiting one
way rtansmissions. It is broadcasting that is not legal. This is a one way
transmission that can be demonstrated to be intended for reception by
someone. Also if it is coordinated properly they will not be causing
interference with anyone else.

One suggestion would be to go to the 900 MHz or 1200 MHz band to use
for the downlink so that it does not interfere with the RC receiver in the
airplae. Also the antennas for these bands are smaller than for the 430 MHz
band.

>David Johnson - KJ7GA "That's no moon...That's a space station."

Yup, my wife has the 202, and I get to play with it a lot... This radio never ceases to amaze me! Hooked up to an outside antenna, it makes a decent base-station rig - 8-10W (!) out on a 13.8V power supply or gelcell battery, virtually zero intermod, images, or desense, and we're two miles line-of-sight to a big pager/commercial site. Handheld, I can hear repeaters from deep inside the building here at work, where normally the digital crud would drown out everything. The back of the radio is cast aluminum, which gives it a nice solid look and feel. This is also the heat sink. It does so many "game-boy" things, as Gary would say, that I can't remember them all, including stuff like one-button transmit of a DTMF string, DTMF code squelch, etc, etc.

If want a radio for communications, you really can't beat it at $200-250 new. If you want a scanner built in, you'll pay a lot more, and get less communications capability. I also own an IC2AT, the thumbwheel "brick" that's supposed to be such a great radio. To be honest, it's next to useless in any high RF environment, in comparison to the HTX202.

I do like to play with radios that can rcv DC to daylight. Scanning can be fun, and even useful at times. Let's hope the manufacturers continue the trend toward making these kinds of radios tighter, with sliding bandpass filters in the front ends. My old scanners have a crappy implementation of something similar, and let's just say I hope the new transceivers do better.

Dear All,

I am a complete radio novice living in the UK with a passion for USA baseball. I need to find out if it is possible to pick up any american radio broadcasts that will be transmitting baseball games.

I have been told by an independent source that the USA armed forces radio might be a viable avenue for me, how do I pick this up?

Will I need to invest in some hi tech equipment, and if so what?

If this is the wrong newgroup for my query then I am sorry but I do not know. Please point me in the right direction or answer my plea by E-MAILING me, as my newsreader is not picking up anything I actually write for some reason.

Hi Dick,

You'll either have to use a voltmeter to make sure that you have a charging votlage with the NC-38B or take it in blind faith that the unit is working. Not all chargers require some indication, like an LED to show that they work. I have been charging HT batteries for years in the chargers supplied with the radio.

It really doesn't bother me to operate my 530 until the battery power goes so low that the unit will not operate properly. I carry another battery pack around and just swap them out and put the other one in the charger.

Seems we are beginning to expect everything from any piece of equipment we have. You can buy
an NC-50 with the adapters CA-## for whichever battery packs you'll be charging if you want indicator lights on your charger. There aren't too many wall chargers supplied with handheld
radios that have the niceties as a charge light, etc.

Hope this helps.

>tell the new owner that he bought a radio he can't legally use.

That's kind of an extreme situation. Here in St. Louis, the 6 meter band
is rarely used due to KTVI, Channel 2. I fly RC models and use ham
channel 02, and have never had any problems.

As far as putting non-hams on the band, well in our RC flying club we know
all the hams. There are 4 of us, and when any one of us sees a ham frequency
being used, we find out who it is, introduce ourselves, and we mention
our call. If we don't get a call back, we get kinda suspicious. If we feel
that the guy is not a ham, we contact the safety officer, because our AMA
insurance is no longer valid if a non-ham is using a ham frequency. It is
self-policing.

BTW, there are few places one can fly in St. Louis, so it's not like
you can use this thing in you backyard (unless you have 5 acres or more...)
I only know of three places one can fly at, our club, Buder park and part of
Dunagan park in St. Louis (part because some guy crashed his plan through
the roof of a residential house, and they got the county council to
restrict flying over part of the park).

The only caution I would have using ham RC channels, is that due to the
stupid FCC rules (IMHO), the ham cannot have a non-ham buddy take the
transmitter and control the aircraft. This is not my interpretation, it
is the FCC's who issued a ruling especially on this back in 1980. ARRL
agrees with this (hence it probably won't change), and this was
extensively written about in the January and March 1995 AMA magazines.

>only the subparagraphs of 97.405.

You are correct. However, provisions generally applicable to all of
CFR47 appear in Part 2. Wording similar to 97.405 is found in some,
but not all, other parts of CFR47. My interpretation of the intent
of that expression is to apply only to the particular part in which
it is found since that is the pattern of intent found in other places
in CFR47 where such expressions are used.

>he hits the repeater just fine a mile away. From inside my apartment,
>I can't hit our local repeater with my rubber duck but my AEA Hot Rod
>OR my discone (mounted on my second floor ceiling) works just fine.

Consider this, to go from a good signal to gone takes about -12 db
with a typical FM receiver (-20 db if you're a purist about what "good"
means). Now I haven't seen many rubber ducks that have 12 db of gain over
the factory rubber duck. Actually, that's a poor way of stating the case.
I should say that I haven't encountered many factory ducks that have 12 db
more *loss* than some aftermarket ducks, saying any duck has "gain" is a
misnomer. If that actually is the case here, then I'll agree that changing
ducks may solve the problem. I just consider it unlikely. That same lossy
duck worked just fine only a mile away. *Something* is causing at least
12 db of path loss between those points. It can't be just free space loss
unless the working point is right on top of the repeater.

At least the poster *said* it worked just fine a mile away. Now the
real situation could have been that he was marginal at that point,
just barely above the squelch threshold, but everyone was too polite
to tell him that his signal really sucked. In that case, only a couple
db less loss may do the trick from his house. It's hard to get realistic
signal reports.

>the ground. The intended receiver of the signal is a ham station, not the
>general public.

No. It *is* a one way transmission, it's just not a *broadcast*. Two
specific stations are involved, one transmitting, one receiving. For
it not to be a one way transmission, *both* stations must transmit
and receive, *exhanging* communications.

>By the previous posters logic a remote receiver for a repeater is a one way
>transmission.

It *is*, and it's specifically allowed under the auxillary operation
rules, 97.201(e).

Hi Alan, at last an expert. When I hit a note on a piano and ask my Dad to hum the note, he cannot do it. During CW training, I let him hear what a dit sounds like and what a dah sounds like. Then I send one or the other and ask him, was that a dit or a dah. He doesn't have a clue. He otherwise has a high IQ and is a retired Postmaster and accountant. What could be his problem? At 3x the tone-width difference, he cannot tell the difference. At about 6x-7x the tone-width difference, he can.

Hi Jake,

Try http://promet12.cineca.it/htlzh/qsl.html

IK4LZH has set up a QSL manager database at this site that is fully
interactive,by that I mean you can search for managers or if you
know of a route you can add it to the database.I think there are about
30,000 entries so far and it can only get better as more people use it
and contribute to the database.

I kept my KD4CPL call when I upgraded to Advanced to help break the unfortunate anti-newcomer bias that a few hams have. I get a lot of double-takes when I wear my QCWA badge with what looks like a "no-code" call (I was originally licensed 30 years ago, but let my ticket expire in the 70's). It helps open people up when they meet someone they think might be a newbie, but designs computer graphics hardware for a living and repairs and operates vintage AM ham gear for fun.

I sympathize with you guys who have gotten a hard time, but really think there are only a few rotten apples in the barrel - I know the clubs and repeater folks around here have been very supportive and welcoming to new hams as have the vintage radio (boatanchor) afficianados I hang out with on the air and at hamfests.

Hang in there and don't let a few mental midgets keep you from enjoying and exploring a great hobby. 73.

Dick

The battery needs charging when the flashing battery comes up on the
lower right of the display. Basically when the voltage falls below the
rating of 9.6 it begins to fall rapidly from then on.

The supplied charger is not much in the way of being useful. I bought the
Master Charger from W&W in N.Y. It will charge any battery in .5 to 2.5
hours and switches to trickle charge when nearing full charge. It has an
LED that lights up when quick charging and it flashes when it switches to
trickle. They also sell batteries that look just like the Yaesu batteries
but are much cheaper and in most cases of a higher capacity.

Perry Chamberlain (kato@qnet.com) wrote:
: Well, I certainly learn fast, don't open your mouth til yer sure what you
: are talking about.

That's generally good advice in all circumstances. It's just a little more difficult to implement when some extremist or another is trying to stir arguments up. These people have reached the level of utterly unshakable belief, it doesn't matter whether their beliefs are right or wrong, they cannot be argued, steered or hounded into a position where they can appreciate the validity of any other viewpoint. In past cases where everyone ignored them, they went away, or, at least, went quiet. I've watched all manner of hardened extremists argue on this forum, I don't recall ever seeing one succeed in changing another.

: thanks to those who helped me out of my mess
: you know who you are

I've found some excellent people in this group. The amateur radio groups seem to have an intensity in arguments that is, fortunately, not present in other groups I've browsed (rec. equestrian is positively friendly). Are the pro/anti CW and pro/anti gun control arguments mostly American things, or is this just an impression fostered by the current population distribution of the internet?

The die-hard argument merchants are few in number, easily spotted, and easily ignored.

: I'll be listening for a while before I stick my foot in my mouth again.
: 73 de shot himself in the foot

You're not the first....

Cheers,
David GM4ZNX

PS: Being ignored is probably the only weapon that the extremists feel.

David, let's not assume. There is at least one person with a radio no longer in thier possession out there. Can you get Mr. Monte Dupont of the Wireless Telecommunications Bureau of the FCC to put the above in writing - on FCC letterhead with signature? Can you supply me with your contact information so I can take this action concurrent (or independent) of yours. I would like to carry same letter with me on travel - a case of need. Maybe just pack it everywhere along with my license.

True, local and State officials have no jurisdiction over Federal crimes.
However, they can charge you with interference with a police officer, a
local/State crime, and make it stick. They can seize anything you used to
commit that crime, and require forfeiture as part of the sentence for
that crime in the same way they could make you forfeit a Federally licensed
aircraft you'd used to buzz one of their cruisers.

>If any such official confiscated my rig I would turn around and swear out a
>complaint under the Communications Act for tampering with the equipment of a

>(such as by TV stations whose news crews are interfered with).

News crews rarely carry the station transmitting apparatus around with
them. It's usually in a building at the base of a tall tower.

From: doug_barlow@novell.com
Message-ID: <3jksc3$eti@grok.provo.Novell.COM>
Source record: 251105

Hello-

I am looking for a headset for my HT that is non-voice activated.
It seems like the VOX-only headsets are very common. I just don't
want to have to turn off my HT every time I want to talk to a person
next to me.

Does a headset exist that has dual modes: VOX and Non-VOX (PTT) settings?
If it matters, I have a 2m Yaesu 11R.

This is a very unfortunate attitude. Fortunately, in this area (Austin, TX), it's not so widespread. True, we've got our share of it--who doesn't?--but it's not as bad as it sounds like it is in other places, thankfully. I've met lots of hams, myself; lots of them are codeless; lots of them are not. Some of them were rude jerks; some of them were lids; most of them were not. And, it seems to me, codeless (or for that matter, coded) hams don't have a monopoly on rude jerks and lids. (Good thing.)

It is, as you all say, interesting that the rude behaviour isn't so prevalent on cw, even during big pileups. I mean, big pileups are a mess, generally, but I'd much rather slog through a cw pileup than a phone one. Have you ever listened to a pileup on 20 meters? Of course you have. I avoid them...and all those rude jerks and lids have passed a code test, too. Proves nothing. (But if I had my way, I'd still require a sending test...hehe... :))

>but I was just wondering about most areas of the country.

Thats because you're in that 'corridor' that the FCC unwisely decided to let those greedy commercial interests in CANADA simply have the damn band rather than duke it out in court - pussys! So instead of having ATV, simplex, and repeater links, you guys can listen to a bunch of cheap-assed frog-business band garbage, and that one remaining Canadian Radar (which is a totally and unarguabily a political canard - it only works about 4 months out of the year and even then the area it sweeps borders the US and the big Lake, so like whats the freakin point?) Unit which mostly QRM's the band!

Here in So. Cal we have a similar unit that the lame-asses in UncleSam's Canoe Club refuse to give up, it's located at the Navy's test center in Point Magu...damn thing sounds awful! Qrm's the band from 419-439 MHz and makes trouble for everybody.

There *might* be some reason to run antique radars and business-band at 420-430 but you can bet your very-last 2N222 that it's some kind of politically motivated one rather than being based on sound engineering! Acckkpt! Kinda reminds me of the asinine mess at 7.1-7.3...and they call themselves 'planners'..HA!

(and if you clowns from the Fine Candy Company are reading this: keep in mind that we, the People are still possessed with the option that states "..to alter or abolish.." and that includes the FCC...so watch it!)

And that goes double for the bungling bureaucrats at the ITU!

What size antennas are you planning on attaching to this mast? Please
note that chimneys are *not* very good antenna supports. They can handle
very little in the way of over turning forces. The mortar that holds
them together depends upon a lot of weight and very little over turning
forces. Put up too great of a wind load and your chimney's poor draft
problems may get solved in a big way.

G>abraun>COM 1 /IRQ 4 = mouse (mouse CANNOT SHARE AN IRQ WITH ANYTHING ELSE!)
>abraun>COM 2 /IRQ 3 = TNC (actually it's outboard rather than internal but th
>abraun> shouldn't matter)
>abraun>COM 3 is disabled
>abraun>COM 4 /IRQ 3 = modem - for a 14.4 or 28.8 modem you should have a 1655
>abraun> UART on whatever port you're using for the modem
>abraun>IRQ 2 = DVP board
>abraun>IRQ 5 = sound blaster
(snipped)

Greetings All:

For those that need extra independent serial ports Lava Computer
MFG. Inc. in Canada at 416-674-5942 sell a series of I/O cards that can
be configured for IRQ 2, 3, 4, 5, 10, 11, 12 or 13. Most com port
cards do not provide for configuration to the IRQs above 7 thus limit
the choices. For example Lava have a dual 16550 serial port card, model
Lava DB9-550, that is priced at $34.00 Canadian funds in single unit
quantities.

I have no connection with Lava but was able to help a friend get
around a serial port conflict problem involving a mouse, TNC, modem and
a fourth com port using the aforementioned product.

>frequency range, and is then Type Accepted for receiving certain frequency range of
operation.
>
>Many times even the wide receive modifications are not legal as the receiver has not been
tested
>in those frequency ranges, therefore would not pass FCC Part 15.

Gary brings up an excellent point here. Any mods one makes to their
HT's receiver might cause interference to other services (remember,
your receiver is an oscillator and emits low-level RF). Even those
`opening up' their scanners might end up with a receiver that is
violating Part 15 regs due to illegal emissions.

>part 15 or part 97 or any other FCC rules. Only operating it is!

Hi Brian,
Were you planning on not listening to your HT? As Gary implied, if
you modify your HT's receiver it might be in violation of Part 15
due to illegal emissions. Turning the receiver on is `operating' it.

Jeff NH6IL

: Good Luck
: Avery N3TOU

Thanks for the referral, Avery. I'll go you one better; an ARRL catalog appears in each issue of QST, received by all ARRL Members. If anyone is not a Member, and you would like a free catalog, send email to djahnke@arrl.org and ask for a publications catalog. (We will pay the stamp!) Include your name, callsign and postal address. If you are not an ARRL Member, we will include a Membership brochure, describing ARRL benefits, and a Membership application.

The text of the catalog and Membership benefits are available electronically from the ARRL automated electronic mail server, info@arrl.org and by ftp from the ARRL area at oak.oakland.edu.

If you have questions about our technical books, direct them to tis@arrl.org. Questions about other books can be directed to djahnke, or to the book editor.

I remembered a DX Net from the 1980s called "The Triple H Net" on 7238 that was anchored by a "Hank" Greenburg (W2LTP) from New Jersey. The net was designed to help new amateurs in getting states and countries that the new hams would need. I am wondering if this net is still active on 7238 and what time they proceed for check-ins.
I also am wondering if W2LTP is still active. He was always a very colorful character on the bands when I used to listen to the check-ins from around the globe. Thank you for your help.

Icom sells (or used to) sell a VOX switch box. And there were several
various cables available to use it with other brand radios if I remember
right.

Nice headset, boom mic and single foam padded ear phone. PTT was switched
on-off-momentary.

Kind of off-subject, but...

I have been totally corrupted by amateur radio. My wife agrees.
I used to be able to hike up a good-sized "mountain", or even a
typical observation tower and enjoy the beautiful view of nature.

Now, I can't help but thinking, "Gee, I wonder how many contacts
I could make from here" or "What a great place for a repeater!".

There was a time when ham radio was considered a pool ot technical expertise...one of the reasons that ham radio has been allowed to exist in this country along with public service and emergency communiations etc... (I say that because I remember there being a Part 97 type question about the charter of ham radio on my novice exam about 25 years ago and not a political statement)

I consider it an honor that they looked here instead of just ignoring us all together. Maybe its just a perk of the hobby that we have the reputation of being that source of technical expertise and considered by potential employers before others.

To the radioamateurs of IOTA !

The organizing committee (the organizer "Russian Robinson Club") invites all the radio-amateurs who want and who are interested in the world insular programm IOTA to take part in the International radio-amateurs hamvention devoted to the 30-th IOTA programm annivesiry which will take place in Russia, in Lipetsk on the 13th-14th of May 1995. It's aim is popularization of IOTA/RRA movement in Russia and other countries of the world. You are supposed to have interesting meetings and acquaintances with IOTA expeditionaries and IOTA hunters, with the members of "Russian Robinson Club";

- new intersting projects of IOTA travellings in 1995-1996;
- summing up of radio-amateurs questioning "The best IOTA DX'pedition '94" and "The best IOTA DX'pedition '94 in Russia";
- official spreading of IOTA-directory;
- introduction and review of videofilms: 4J1FW 4J1FM (UY5XE), XF4M (RA3AUU), RZ3AZO/1 (RW3GW), "The North Pole" (RA3MR) and many others.
- presentation of the special issue of the journal "30 years of IOTA", stands with "Russian Robinson Club" activity;
- lottery without loss (interesting prices);
- organizing a football match between combined teams of DXCC and IOTA (football lovers must have sportforms and sport boots);
- organizing of the exhibition of the museum;
- a holyday dinner/party and many others interesting things.

We'll be grateful to you for introducing materials (articles, slides, videofilms, publications and others) for conference.
Messrs IOTA-expeditionaries and IOTA-hunters we are waiting for you at our IOTA meeting, for the first time in Russia ! You are welcome ! The guests from foreign countries will be met in Moscow and shown to the place where the conference will be held by the assistants of the organizing committee of the conference.

Date: 1995-03-09 13:46:43 UTC
From: dhinch@cello.gina.calstate.edu
Message-ID: <3jn0s3$jvk@cello.gina.calstate.edu>
Source record: 251148

I am considering purchasing the TM-733A and have received considerable feedback, both pro and con from the readers of this group. Thanks a lot for all of the inputs. One of the comments pointed me to the TM-733A mods writeup on the QRZ server (ftp.qrz.com). In that paper, two problems were mentioned: 1. The quality of the transmitted PL tones is poor and 2. When the DTMF confirmation mode is enabled, the transmitted DTMF code is distorted.

My question is: Are these problems still present on units currently shipping?

Thanks in advance.

>at 5 words per minute.
>
>I have never met a ham yet who couldn't copy 5 wpm after some practice.
>Of course such people may exist, but then so do lottery winners.

Up until fairly recently I hadn't met a *ham* who couldn't copy 5 WPM either. But that's because they couldn't *become* hams. That made it all rather self-selected. I did meet *non-hams* who couldn't copy 5 WPM. Now that there is a way for them to become hams, more and more of those people who can't copy 5 WPM are becoming hams, and you may start meeting them too.

In my experience, however, the number of people who really really can't do 5 WPM *is* similar to the number of major lottery winners. Those who can't get 13 WPM seem more common, perhaps similar to the number of scratch and win minor lottery winners (about 1 in 200 in the general population). Again in my experience, many of them *can* get the Code with a different learning strategy, though it usually takes a *lot* more effort than that needed by those more gifted, as exemplified by the (self-selected) traditional amateur population.

What galls me is the attitude expressed by some of the traditional amateur population that, "it's easy, I did it, so can you, you're just lazy." That totally fails to recognize that not all people have the same talents. It's somewhat akin to Chet Atkins chiding some poor tone deaf guitar hacker because he can't match Chet's expertise (that would never really happen, Chet's too much of a gentleman). There is more than just effort involved (though that's certainly necessary too, often in much larger measure than traditional amateurs will credit). Just because it was easy *for them* doesn't mean that it's a universal truth.

Definitely has some merit. The (simplex) frequency would have to be chosen
for minimum interference to local activity, and an alternative should be
chosen as well, in case the preferred frequency is in use at a particular
location. If train spotters knew what frequency to gather on, they'd
doubtless have more productive sessions.

You might try cross-posting this to the model railroad newsgroup; there are
more than a few hams there, and lots of train spotters, both in this
country and overseas.

From: Jeffrey Pawlan <jpawlan@arasmith.com>
Message-ID: <3jnhjj$4af@kadath.zeitgeist.net>
Source record: 251116

If anyone knows of a ham in Liechtenstein with a working HF station, please let me know as a friend of mine is going to Europe next week and is interested in operating from HB0, if possible.
We do have the small list from the 95 callbook, but that does not mean that they are all active.

Hello,

I posted something on this a few weeks ago in radio.ama.equip and got only one response from a person with a '91 Galant who has had no problems.

I would like to put in a 2M/440 rig in my '95 without interfering with the ECU in the dash which controls the engine and fuel injector. Has anyone out there had any Galant experience with VHF? I really would appriciate any correspondence about this.

Josh Daniels, N2JLL/9

I claim this is legend. No real basis in fact.

If you have the 20 dB difference in signal strength required for
a good quieting capture, the other station is probably about 10 times
as far away -- not likely to be of much concern.

If they don't get an answer, they will call again when they hear
someone else having been answered.

The squeals are just an annoyance, and capture would be a benefit, at
least that way one of the messages would get through.

If you look at the performance of FM it is clear that the signal will
be fine out to the horizon. 10 watts of VHF FM will go a very long
ways line of sight.

If you look at the problems understanding weaker AM signals in a
noisy aircraft, you would be begging for FM.

>aircraft you'd used to buzz one of their cruisers.

Local police agencies cannot confiscate amateur equipment regardless of
the crime committed. The Code of Federal Regulations as well as the
United States Code do not allow the transfer of operations control
without concent of the stations control operator's permission.

Technically, the only action a police force can take is to notify
the feds of the problem, and let them take care of it. Of course
there are police forces out there who aren't aware of this, and the
persons getting their equipment confiscated probably wouldn't know
either, but only federal marshals can confiscate amateur equipment.

I think this applies to ALL radio equipment, even CB, but I'm not sure.
I do know that it applies to amateur equipment.

3044. Field Day question

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-09 21:00:25 UTC
From: probert@nspace.cs.ucsb.edu
Message-ID: <3jnq99$r8b@nspace.cs.ucsb.edu>
Source record: 251174

My son and I are coordinating Field Day activies for our local club.
Last night one of the board members told us that he thought there were
special rules for Field Day operation which restricted operation above
your privileges.

So my questions are as follows. On Field Day:

Can unlicensed individuals operate under the supervision of an appropriately
licensed control operator?

In particular, can they operate the Novice/Tech station?

Can Novice/Techs operate the 20m station under a control operator?

The 1994 rules do seem to suggest that only Novice/Techs should operate the
Novice/Tech station -- but I assume this is to keep higher class licenses
from sandbagging. Is that correct?

I hope that the rules don't preclude operation under a control operator. Last year
my son (he was 12 at the time), had passed his TechPlus, and was waiting for his
license to arrive. He went to Field Day, operated under supervision, got completely
hooked, and as a result achieved his Amateur Extra in September, is just waiting for
the return QSL cards to show up so he can get his WAS and WAC, and is co-chair
of Field Day this year. I would like to see similar enthusiasm kindled in others
this year.

>violating Part 15 regs due to illegal emissions.

For the most part, any amateur transciever who's reciever can be modified
to recieve out of band can do so because the receiver was designed to
be used for more than one application.
For example, the Yaesu FT-23R out of the box received 144-148.
BUT, the reciever was identical to the one inside of the radio's
commercially made brother used in some business bands around 152-156 or so.
When Yaesu designed the radios, they knew it would be cheaper to build
one receiver for several radios, and type accept it for the entire range.
The FCC has type accepted the reciever in the 23R for the range 140-164.
So modifying the reciever to tune to all of these frequencies won't
violate type acceptance certification.
I doubt a manufacturer would design a chip and circuit which could
be modified to allow reception of frequencies for which the unit's
reciever wasn't type accepted for. (easy modifications, that is)

3047. The Media and Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-09 22:33:20 UTC
From: billhar@spaceworks.com
Message-ID: <D572nL.Lz6@spaceworks.com>
Source record: 250981

There is a very good article in the April issue of Omni magazine about Ham radio. It talks of an old hobby that tackles today's communications demands. With all of the communications technology of today, satellites, cellular phones, computer networks, some folks think there is no longer a need for amateur radio when it comes to emergency communications. An example of the contrary in the article is Hurricane Andrew that hit Dade County, Florida, knocking out communication channels including cellular phone. The hams were there providing communications.

3048. San Diego Confiscated HT Summary (LONG)

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-09 22:40:00 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9502097947.AA794788963@ccmail.anatcp.rockwell.com>
Source record: 250980

There have once again been a plethora of references to the now infamous confiscated HT in San Diego. Below is my entire compendium of pertinent posts on the subject, edited somewhat to avoid too much duplication. My intent is to deliver the facts as they were reported at the time and (hopefully) correct some of the distortions that have crept into the tail. :-) I left the .sig's after the appropriate sections to give credit where due.

****

The San Diego Sheriff's confiscation of a ham's HT in 1993 is a story that could become an urban legend, as has been alleged in the past. The fact is, it happened. Yes, it would appear that the San Diego Sheriff had no legal authority to confiscate the HT, but the department, with the aid of the local FCC Field Engineer, did succeed in coercing Chris to "voluntarily" donate his HT to the SD RACES rather than face prosecution. The last I heard, the San Diego County Supervisors voted to decline the "gift". One thing that came out in 1993 is that at about the same time as Chris used his HT on the Sheriff's frequency to summon aid, another person was causing malicious interference on Sheriff's frequencies. The word is that the two together greatly irritated the Sheriff and drove the coercive activity that relieved Chris of his HT.

Bill Kirsanoff

There have been two articles in the San Diego Union, they are on the bulletin board at HRO. Here is a summary of the first one, I don't have a copy of the second article.

The article states that everyone acknowledges that it was the ``act of a good Samaritan.'' but that ``authorities confiscated Chris Boyer's portable ham radio last month after he used it to obtain emergency medical help for a seriously injured friend.'' It states that he ran into trouble because he called for help on a Sheriff's Department frequency that he isn't authorized to transmit on. They quote William Grigsby, engineer in charge of the San Diego FCC office: ``"Under the regulatory scheme, ... this kind of operation by persons who are not authorized is strictly prohibited, he is also quoted to say that "We can't have a situation where everyone who wants to have a transmitter on the police or sheriff's frequency can, if this continues, we're going to have chaos for the law enforcement system."

It states that Boyer tried to get help on five other repeaters but couldn't get anyone, they also tried a cellular phone but couldn't connect because they were ``in a ravine, toward the bottom of a canyon''. He then rode up the trail a half mile and tried again from a better spot but still couldn't get through, at that point they decided to try the SO frequency. The

article says `` "I look and this guy's bleeding, he's taken a head trauma," Boyer said. "I came on, gave my call sign - I wasn't trying to hide - and said, 'I'm a radio amateur with emergency traffic.' The dispatcher said, "Go ahead."

Two weeks later, he got a letter from Bill Kahn (communications coordinator) for the SO, telling him to meet with Kahn and an FCC person. He was given the choice of having to ``forfeit'' or be prosecuted by the federal government.

There are several quotes from different people including this one from county Supervisor Dianne Jacob, who represents that part of the county. ``"The frequencies are protected for public-safety emergencies," Jacob said. "Well, this individual had an emergency.''... ``"I think anyone in the same circumstances, including myself, would do the same thing."

In the second article I think there was a story about how Kahn had used his SO radio to request help when he got hurt while off duty out in the back country. I think it also quoted all the part 97.403 and mentioned that Chris Boyer now had an attorney and was going to fight to get his radio back.

--GaryM
--
Gary Morris KK6YB Internet: garym@alsys.com
San Diego, CA USA Phone: +1 619-457-2700 x128 (work)

This was the lead article in Tom Blair's column in the February 17, 1994 edition of the San Diego Union-Tribune.

"In a new bit of tension between the Board of Supervisors and Sheriff Jim Roache, the board refused Tuesday to accept a gift to the Sheriff's Dept. and told the sheriff to return it. The gift: a portable ham radio used last August by a back-country bicyclist, Chris Boyer, to summon help for a seriously injured friend. After sheriff's deputies responded to the emergency call, they told Boyer he had violated FCC rules by using restricted emergency frequencies and ordered him to surrender the improperly altered radio to them and the FCC. To avoid further hassle, Boyer signed the radio over to the department as a gift. But the supervisors, who honored Boyer in December as a good Samaritan, said no thanks this week. They urged the sheriff to return the radio to Boyer."

John WA6ORO

I KNEW (I actually wished :) he was going to get it back. Now I hope it doesn't take the Sheriff Office some years to do it, and not making it difficult for Chris Boyer. The tension of the above 2 groups exist for many years, when I still lived in San Diego, or so I heard.

David Tse
--
David Tse, VE7MDT Internet: a10554@giant.rsoft.bc.ca

I will prefer e-mail sent to above address.
My PO Box is CANCELED, please do not use.

There were two related circumstances that caused this to get blown out of proportion a bit. First, about two weeks before Boyer called in his "emergency" on an SO frequency, there was another person who had been jamming the SO frequencies using similar equipment, so they were particularly sensitive at the time this happened. Second, I have heard that Boyer is an engineer for a local radio or TV station and he admitted in that meeting with the FCC engineer that he had modified his amateur HT so he could use it on his station's commercial UHF repeaters and that he regularly used it on those frequencies. I think this second item is why the FCC went along with the SO in regard to confiscating the radio because it was not type-accepted for that use. I believe the radio is still in limbo somewhere, but RACES never did get it. Hopefully, Chris will get it back someday. I haven't heard much on this lately though.

>to me.
> GL and 73 Gerry K8EF@W8CQK.OH.USA.NA
>
>
Gerry -

In response to your question, I work for Medtronic, Inc, acknowledged as the originator of the implantable cardiac pacemaker and manufacturer of roughly 70% of the pacemakers implanted in the world. Enough brag. I read your message and gave our tech services group a call. They informed me that, given the rf parameters you stated, the risk is virtualy non-existant for our pacemaker systems. I cannot speak for other manufactures, but having working in the electromagnetic compatibility section once myself, I can assure you we test for everything that radiates between DC and Daylight. We even used to use a Drake T4B as a RF test source. Should you get a Medtronic pacemaker, you can, as a patient, call our tech services directly at (800) 505-4636 and get your questions answered. I have spent almost 20 years building, testing and researching Medtronic pacemakers and leads. I hope you get one of ours.

Best of luck in your coming implant.

DX Bulletin 11 ARLD011
From ARRL Headquarters
Newington CT March 9, 1995
To all radio amateurs

SB DX ARL ARLD011
ARLD011 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, HS1GOS, Bill, KD5IC, Dora Anna, NI5D, Tosy, JA6VZB, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

CONWAY REEF DXPEDITION UPDATE. Landing permission has been secured and licenses obtained. Three stations will be manned around the clock, requiring more than 14 hours operating time per operator per day for 10 days. The team consists of Mats, SM7PKK, Garry, NI6T, Nils, SM6CAS, Jun, JH4RHF, and Pekka, OH1RY. They plan to be active March 24 to April 3, including the CQWW WPX SSB Contest. For CW and RTTY the call will be 3D2CU. 3D2CT will be used on SSB. QSL 3D2CU via G4WFZ. QSL 3D2CT via Mats Persson, SM7PKK, Zenithgatan 24 5, S-212 14 Malmo, Sweden.

PACIFIC DXPEDITION, BELAU, MICRONESIA AND GUAM. Tosy, JA6VZB, plans to operate as KC6VW March 9 to 17, as V63BM from March 17 to 20, and AH0T/KH2 on March 20. His primary activity will be 160 meters, listening on 1823 kHz. For North Americans try from 1020 to 1500z. Europeans should try from 1900 to 2200z.

TANZANIA. Franco, I4LCK will be active from Mafia Island, AF 054, March 21 to April 2. His call sign will be 5H3CK. He plans to activate two new IOTAs, namely Boydu and Nyuni Islands. He will also be active in the CQ WW WPX Contest from Mafia. QSL to I4LCK.

KUWAIT. Bob, 9K2ZZ, reportedly has improved his 160 meter antenna. Listen for him daily 0000z on 1832 kHz. QSL via W8CNL.

PAKISTAN. Reports indicate that Rudi, DK7PE, is in Pakistan. He is looking for an active DXer in Karachi so he may be on the air soon.

THAILAND. A group of Thai hams will activate a new prefix March 11 and 12 using the call E25CMU. They plan to be active on all bands with CW, SSB, SSTV and satellite. Some operators mentioned are leader HS1AAM, HS1CDX and HS3DF. QSL via PO Box 19, Fang, Chiang Mai THAILAND 50110 or via the bureau.

EUROPA. Stations in QSO with FR5HG on 15 meter RTTY on Friday, March 3, report he will be active from Europa for 45 days starting March 8. Activity will be on RTTY, SSTV, SSB and CW on 40 through 10 meters.

MARIANA ISLANDS. Frank, AH0W/OH2LVG, plans to be active from March 23 to 30. Most action will be on the low and WARC bands. Listen for his CW, SSB and the possibility of satellite work on RS-12 and RS-13. QSL via KE7LZ.

EGYPT. Ahmed, SU3AM, is very active on 20 meter SSB and plans to be active until March 18. QSL via DL5ZBV.

CAYMAN ISLANDS. John, NC8V, will be on the air from Little Cayman Island, NA 016, as ZF2JC/ZF8 from March 16 to 21. Most operating will probably be on IOTA frequencies, but he will try to work in the Novice CW subbands. John operates mostly SSB but will switch to CW on request. QSL via NC8V.

THIS WEEKEND ON THE RADIO. The Wisconsin QSO Party, sponsored by the West Allis RAC, runs from 1800z March 12 to 0100z March 13, CW and Phone. See page 105 in the February issue of QST for more details.

3052. Need windows 3.1 for 286 on pactor, help!

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-09 23:36:33 UTC
From: equinox@halcyon.com
Message-ID: <equinox-0903951536330001@lcy-ip0.halcyon.com>
Source record: 251126

Hello-
I am looking for a version of Windows 3.1 that I could load onto my 286
machine. Since it's so old I was thinking somebody wouldn't mind
compressing it and sending it to me so I can update the old machine
enough to use the software I have downloaded...
Thanks
Jonathan, Olympia, WA KC7FYS

>
>73, John Lumkes
>lumkes@cae.wisc.edu
>KB9JIT
>

UHF and N connectors are definitely NOT interchangeable. They're physically quite different from each other. In short, N connectors provide a 50 Ohm constant connection (or 75 Ohm) and UHF do not. Typically, N connectors are used at UHF (300 MHz) and higher frequencies while UHF connectors are used in the VHF and HF regions. I know of at least one ham who has installed N connectors on ALL of his rigs - 160m and up!

As to which one is better - what is it's intended use? At UHF and above I would consider N connectors only. At HF there is very little difference. UHF connectors tend to be mechanically stronger than N, but N connectors form a better weather seal. (Don't ever believe claims that N connectors are waterproof - always apply proper sealing techniques to any type of RF connection that is exposed to the elements.) In the broadcast world both UHF and N connectors are rare - EIA flange connectors rule here!

P.S. UHF stands for "Union - High Frequency" when refering to connectors.

3054. Question about the 5WPM code test

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-10 01:40:26 UTC
From: etuggle@dora.auc.trw.com
Message-ID: <3joama$4fn@dora.auc.trw.com>
Source record: 251169
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Well, I did it! I purchased the Code Quick tapes (about $50) and decided
to learn the code. When I started in amateur radio (about a year ago) I
had no plans to upgrade because I didn't want to take the code test. I thought
It would be too hard and I didn't have the time. I did want HF privs however!
The only way I could get them was to study the code :-(So I did...

It has been only two (2) weeks using the Code Quick tapes and I can copy
almost eight (8) WPM!!!!!!! I could not believe it. I have found it to be
fun learning code. I have only spend a total of 8 hours with the tapes.

Well, the whole point of this post is to ask some of you that have already
gone though the cw tests what the format is like. Some folks have told me
you only have to copy 25 characters (in a row) correct and you pass. Others
have told me there is a 10 question quiz after the code is sent. Even others
have told me for the 5WPM there is no numbers, just text.?.?.? What's the
poop? Some folks have told me for the 13WPM test, all I need to do is to
use the "is" method. That is listen for the .. ... (is) and the information
after that word is all I need to pass the exam. I doubt if that is true.
Tnx for any help..

BTW, I hope the first part of this post didn't sound like an INFOmercial :-)
I was just so supprised that I could learn 8WPM in 2 Weeks!!!!

3058. Ham Log IBM Logging Program

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-10 04:00:29 UTC
From: rhg@sydney.DIALix.oz.au
Message-ID: <3joist$94e$1@sydney.DIALix.oz.au>
Source record: 251146

Hi,

I am the author of Ham Log - the IBM computer program for amateurs to log their contacts. In its fifth year of development, Ham Log has been acclaimed world-wide.

It is a professional program that has a enormous facilities and functions, yet very simple to use. From the last review in The Canadian Amateur magazine:

"This is the first computer program I have in years that I really cannot find anything to improve on. With so many features, it is beyond this reviewer's ability to do it full justice. I rank it [Ham Log] as one of the 'breakthroughs' in computer technology applied to t his fine hobby, ranking with Baycom, JVFax and Hamcom."

In Amateur Radio Action (Dec. '94), the editor Len Shaw wrote:

"... the opinion of many, myself included, Ham Log is already the best such product on the market. In my position as editor, I get to see and use most logging programs at some time or other and from my first encounter with Ham Log, I have believed it to be the best available - and that includes some quite expensive American programs."

Now, the fully functional demonstration version of Ham Log 3.1 is available on the Internet for downloading. There are two files to grab: ham_log3.zip (about 290k) and ham_log3.txt.

FTP to ftp.une.edu.au
Ham Log is located in the directory: /pub/ham-radio/ham-log

If you have any queries or comments, please e-mail me at: rhg@ozemail.com.au

I'm certain you will be impressed with Ham Log v.3.1

Kind regards,

Robin Gandevia

pgeorge@sallie.wellesley.edu (PETER Q. GEORGE) writes:

>There seems to be a new craze of putting down amateurs who have N1 in the
>front of their callsign. N1 is usually the prefix that denotes a Technician
>or General Class licensee. I was listening to a local repeater and was totally
>amazed of how much "No-Code" bashing is so common.

Actually, its usually an N1 callsign that is N1Jxx or later. Pre-N1Jxx
callsigns are at least tech pluses.

>Apparently these "bozos"
>feel that amateurs with a N1 prefix are not considered to be "real" amateurs
>especially the "No-Code" ones.

If I remember correctly, hams that came in thru the novice enhancement
received roughly the same treatment. The no-code tech license caused alot
of division in the hobby, and you can't expect it
to go away in four years.

> There are a lot of NEW amateurs out
> there who are a credit to the hobby.

And there are alot of bozos. Especially in our
area. Just this week I heard someone tell another
ham the reason he heard a Springfield MA station
(about 90 miles away) was due to "the snow and ice"
in the air helping propagation. I didn't have the heart to key up and
mutter the word "absorption" to him.

As opposed to the codeless tech license that I am, I also realize
that its helped the hobby quite a bit in some areas of the country.
I just wish some of those benefits would show up around here.

dave,

Do not be so sure of yourself. The IC-2IA will receive aircraft, but was not tested for Part 15 rules
for that frequencty range. It did not operate there without modification so it really was not
legal to modify the receiver for the aircraft expansion with that radio. The 2IA's accepted range
was receiving 136 to 174 MHz. You really need to get a copy of the type acceptance for each radio you want to modify.

Each radio that has a receiver that operates above needs to pass type acceptance, not just the
design of a receiver unit the manufacturer used in another radio. The latest radio's will

be
type accepted as a scanning receiver. This again is the amateur radios of mass manufacturer.
remember you can build your own and do not need it type accepted, just need to follow the technical specifications of Part 97.

Gary

3064. Slow-scan TV

You are absolutely correct in that ANYONE may operate at
Field Day. The only restriction is that only Novice, Technician,
and Tecniciam Plus operators may operate the extra credit
free novice station. It should not be surprisung that some will
try to hold the opportunity from new amateurs out of greed.
On the other hand there are many clubs that use the opportunity
to hook new amateurs and give them the taste of other than VHF
repeaters so they will upgrade.

The N connector is used at U.H.F. frequencies because it has little loss
at those frequencies and the Pl-259 has a high loss at U.H.F. and above.
The higher the frequency the higher the loss with PL-259 although the
lower U.H.F. freqs it will work for.

>Can someone let me know what would be the best way to ground the
>antenna and mast?

The *minimum* you can do according to the NEC is use a #8 or larger
wire, run *directly* from the mast to ground with no sharp bends. The
ground should be, *at minimum*, an eight foot driven rod. Now if you
want *real* strike protection, you're going to have to do more, as I've
outlined in several postings, but this is the minimum that Code will
allow. It will offer fairly good protection to the *dwelling*, but
probably won't save your equipment.

Mine won't do this. If I try to enter a freq higher than 450, it just
goes back to whatever freq was on before I tried to enter anything.
I bought the 530 about a year and a half ago, though, so maybe this is
something that's changed.

David, I must apologize. I was confusing the Larsen antenna
with the AEA. I do have one of those telescoping wonders in
a drawer around here somewhere, but I don't use it for fear
of breaking the BNC connector off the HT (it did break the
connector off a u2AT I had). That's a heavy awkward thing to
hang on a little HT. I admit it should have better gain than a
factory duck. What I use day to day is the Comet. It's a long,
but nicely flexible, dual band duck. I doubt that the AEA is
more than 2 db better than that.

3072. Re: PL-259 vs. N-style connectors?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-10 16:04:33 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1995Mar10.160433.2270@ke4zv.atl.ga.us>
Source record: 250993

In article <3jnovs$q60@news.doit.wisc.edu> lumkes@cae.wisc.edu (John Lumkes) writes:
>Quick question. Are PL-259 and N-style connectors interchangeable?

No. That's to say, they won't screw into each other's sockets. They're interchangeable in the sense that they'll fit the same kinds of cables, and they both are RF connectors.

>If not, what are the differences and which is better? It seems like
>PL-259 is the most common but I have better deals (used cables) on
>getting some N-style connectors. Thanks

N connectors are better. They are constant impedance while the UHF fittings are not, and if properly installed, offer a bit more weather protection than the UHF fittings. The typical N fitting is a little tricky to install properly, but so is the typical UHF fitting (PL-259, SO-239, etc). The difference is that most people don't realize they're installing the UHF connector improperly. Since the UHF fitting isn't constant impedance anyway, people sometimes get away with sloppy technique. If you want the lowest loss and better weatherproofing, you'll use N connectors. And you'll add extra weatherproofing to either type if installed outdoors.

Typically, at UHF and up, the N connector will be standard on most equipment. At VHF and down, amateur equipment will typically have the UHF fittings, but commercial grade equipment will still have N fittings, even at HF. (The name UHF for the PL-259, SO-239 series of connectors is a misnomer since they aren't well suited to UHF use. The name came about back when 30 MHz was nose bleed country.)

Alternatively, there is the BNC fitting. It shares the same constant impedance characteristic of the N fitting, and on the same cables, the same power rating, but uses a quick twist lock mechanism instead of screwing on. This type of connector is often used indoors, or where frequent configuration changes are needed. It's available for the same cable sizes as UHF and N fittings, though it's somewhat rare to encounter a BNC for the larger cables.

For very high power use, more than amateurs are allowed, the C or the EIA connector will be used. The C connector looks like a N connector on steroids, and the EIA connector uses a bolted flange. It comes in several sizes.

>type accepted as a scanning receiver. This again is the amateur radios of mass manufacturer.
>remember you can build your own and do not need it type accepted, just need to follow the
>technical specifications of Part 97.

You are right, each individual radio is different.
But, this just raises another loopole/grey area in the regulations.
If you modify a radio to extend its receiving capability,
you automatically void its type acceptance as per part 15 .

But, once you mess with the receiver, without having a valid
type acceptance assigned to it, isn't it the same thing as
building one from scratch. You didn't manufacture, or sell the thing,
you basically built it. It doesn't matter if you built it from
individual parts, or from a whole unit.

Isn't this how people are capable of building amateur gear from
surplus military stuff? Who cares about type acceptance, because
type acceptance ONLY applies to the manufacture and sale of the
equipment.

LIke I said, you were correct about individual radios being
different. I used the example of the FT-23R before I realized
that not all manufacturers use the same receiver in more than
one modle of radio. I doubt there are many dualband commercial
radios on the maket, so it stands to reason that the recievers
in dualband amateur gear is 'special', and only type accepted for
amateur frequencies.

It would be interesting to find out what the receiver in the
FT-51R is type accepted for. It requires a 'software'
modification to recieve outside the amateur band. So, does
its reciever actually need to be type accepted for anything
other than the amateur frequencies? Is a software modification
equivalent to a hardware modification in the eyes of the FCC?
I would guess it is, but I am always warned of guessing.

-So my questions are as follows. On Field Day:
-
- Can unlicensed individuals operate under the supervision of an appropriately
- licensed control operator?

Sure. Just watch out for third-party limitations when contacting DX stations.

- In particular, can they operate the Novice/Tech station?
Interesting question. According to the FCC, yes. According to the league, I'm not sure (I think the rules state only novice/techs, but that may be an oversight)

- Can Novice/Techs operate the 20m station under a control operator?
Same as unlicensed stations.

- The 1994 rules do seem to suggest that only Novice/Techs should operate the
- Novice/Tech station -- but I assume this is to keep higher class licenses
- from sandbagging. Is that correct?
This has always been the case. BTW, I think this includes setup.

-I hope that the rules don't preclude operation under a control operator.

That would be counter-productive, since one of the goals for FD is to get people interested in Ham radio. It is hard to do that if they can't operate.

Larry --

You need an FCC Form 610, available from the FCC's Forms Distribution Center (1-800-418-3676) or the ARRL (1-203-666-1541 or e-mail to mcarcia@arrl.org). Fill that out and submit it along with a copy of your license. You will receive the renewal in the mail in several weeks.

There is a 2-year grace period for renewals, so you should keep your current callsign. Good luck &

>
>I will be visiting India for a month. I am a citizen of India
>and have a Tech Plus license from here. I would appreciate some
>answers for the following questions:
>
>1. How easy is it to get a license in India?

Procedure is simple but takes a lot of time to get the
licence physically in hand, since the licencing authority
(Wireless Planning and Coordination Wing of Dept. of Telecommunication
i.e. Indian FCC in New Delhi, amateur licensing section)is under staffed and
there is a hugh back log. Its not computerised like FCC. You can
forget about getting a licence within a month.

>2. Who do I contact to get a license? (I will be going to Bangalore)

Local or Reciprocal ?
For local license: You need to sit for an examination.
Both theory(rules + radio theory) and practical (morse sending
and receiving). Exams are conducted at the wireless monitoring
stations situated near many major cities in India. You have one
near Bangalore also.
You need to contact the officer incharge of the
monitoring station to schedule an exam. for you. based on your
result in th exam. licence is issued from New Delhi.

There is no concept of VE/VEC as in USA.

Reciprocal: You need to apply well in advance to the authority in Delhi
with attested copies of your licence etc. Its better if you
could contact some ham in Delhi who could expedite the process by physically
going to the licensing office. Since amateur licensing is considered low
priority by them, hence the dept. is under staffed.

FYI, Bangalore has highest concentration of hams in India. They have
2 repeaters (open).

For additional information you could send me mail.

>3. What are the license classes and what are the freq. privileges?

5 types of licence
1. Advanced (12 wpm morse send&receive + rules + advanced radio theory)
all HF / VHF / UHF access of Indian amateur bands.

2. grade I (12 wpm morse send&receive + rules + moderate theory)
same as 1 except less power (100w in HF max. 10w VHF)

3. grade II (5 wpm morse send+receive + rules + simple theory)
same as 2 except log extract of first 100 both way CW contacts
should be submitted to get voice endorsement on HF bands)

4. Restricted (only rules & theory)
Only VHF access, also if you fail in morse exam. for 1,2 or 3, you
could get this class.

5. SWL (No exam, only listening permission)
Log extract of ham QSO's heard should be submitted to renew
licence.

Contact me for more information if needed.

>4. Is it ok to take an HT with me?

I would suggest not to take the HT. In India it is illegal to
possess a communication RX or TX or TCVR without proper licence.
Hence such equipments are taboo for Indian customs and may be confiscated.
In best case you may be allowed to leave the HT at customs and collect it
while coming back.
Though it is legal for hams to import an equipment in India
through proper importing procedures by payment of duty (50-60%),
most of the customs officers at airports are ignorant of amateur hobby
and may give you a trouble even if you have a valid Indian amateur licence.
But there is a way out....

for more info contact me.

>hours of the night, they get riled up, and they want more.

I'm happy to report that the local guys did a great PR job
on the SAREX school contact here last evening in Atlanta.
They got radio and TV coverage. WGST gave them good radio
mention, and at least WXIA-TV had a camera crew present
and broadcast the contact on this morning's news show.

It was very positive coverage, but it only happened because
the hams involved did an excellent job of *selling* the story
to the news producers. This is critical. If you want good PR,
you've got to work at it. The media isn't going to come looking
for you, unless you've done some sensationalistic screw-up.

For good PR, you've got to convince them it's worth covering,
and make it easy for them to cover it. That includes *timely*
press releases with key information, and followup calls to
the producers. Tying the amateur angle to something else of
interest, like the Shuttle, or positive effects on kids, will
increase your chances of getting coverage.

NASA, and the SAREX team at NASA, deserve a big pat on the
back as well. In national news coverage, they have repeatedly
slipped in mention of the amateur radio connection with the
current Shuttle flight. It's the best job done to date in
mentioning SAREX activities. In general, the media didn't
ask, but they were *told* about it during the routine
coverage. That's what it takes. Don't expect the media
to cover you unless you meet them at least halfway. Give
them a hook, help them write the story, sell, sell, sell.

<wolfgang.scherer@ccxbbs.uunet.ve> wrote:
> But what caught my attention was the use of solar power to recharge
>the batteries for the HHT.

Wolfgang,

I have used a solar panel, to charge the batery in a fixed station away
from mains, but not for mountain climbing. Quite frankly, it has it's
limits. Take a 50 W panel, which is not exactly small, and have
it sitting in the sun. On average it will harvest 5 to 10 watthours
per day, which is about 400 to 800 mAhours at 12V. Now this is
quite optimistic, sincesome losses during charging will occur.

(of cause, for no clouds and if you keep tracking, performance will
be a lot better, the above is for a fixed panel and average weather)

Now, take a good alkaline battery, sone brands are specified at 10 000
to 18 000 mAh for the "mono" or "C" size. So they will be as good
as the (heavier) accumulator + solar panel for *two weeks*.

Therefore, for shorter, and specially contest like operation it
will have to be battery (rechargeble for cost and ecology), and the solar
panel only for remote operation over long periods.

73, Moritz Dl5UH

Hi Jon --

I think what Bill meant in his March column was that most transceivers today are designed to LET you operate mobile and to make it easy for you if you choose to. But, of course, most people never actually do that. It's something to take up with the manufacturers sometime.

Just because a radio isn't optimized for CW operation (such as with full break-in keying, or QSK), it doesn't mean that you can't have a perfectly good time -- and be very successful -- making CW contacts. So buy your rig, and have a ball on both CW & voice.

Two meters and 440 (70 cm.) are the most popular VHF bands and they are mostly used for local FM mobile contacts. There are occasional band openings that permit repeater "DX." If you're really interested in making faraway contacts on VHF & UHF, then you'll need to invest in a "multimode" radio that permits you to use CW & SSB in addition to FM. Most of the "weak-signal" work and DXing takes place at the bottom of the VHF bands and is done in CW & SSB. It's great fun! (Amateur satellites, by and large, also operate CW & SSB; they offer your best opportunity for true DX on VHF/UHF)

As for HF operation (160-10), you're best off buying the most that you can afford right now, because the rig will likely last for many years, so you should get as much as you can in your initial purchase. Today's rigs are so miniaturized and so complex that it often costs more to gather the parts needed for building your own than to buy a commercially-produced radio. That's why there are so few kits out there anymore.

There are still people using transverters for SSB/CW work on VHF/UHF; they're a lower-priced alternative to buying separate multimode rigs for each band. Unfortunately there aren't many out there (I don't know if anyone still sells them new), so you'd have to build your own or scout around at flea markets.

Six meters is a great band; only problem is the potential for TV interference if you have a station on Ch. 2 in your area, since 6 meters sits just below Ch. 2 in frequency. The spread of cable has reduced this problem.

Power is nice but not necessary. There are many, many, people who have worked hundreds of countries on low power -- what we call QRP, or 5 watts or less. The average HF rig today runs about 100 watts, more than enough for casual contacts nearly anywhere. (The serious contester or DXer who needs to break through "pileups" and beat the competition will go for higher power; but you'll do better to invest in a better antenna system

before buying an amplifier.)

You'll find more about most of this on the CQ videos, Getting Started in Ham Radio and Getting Started in VHF, available directly from CQ at 1-800-853-9797.

Ah, but you should have. Well maybe *you* shouldn't have, but someone could have explained the rudiments of propagation to him in a non-confrontational way that could have made for an enjoyable QSO for both parties. Passing a 5 WPM beeping test wouldn't have taught him a bit more about propagation than the exam he took. Like most newcomers to the service, he's still got lots to learn. And he isn't going to learn it unless someone who knows is willing to teach, or at least point in the right direction.

>As opposed to the codeless tech license that I am, I also realize
>that its helped the hobby quite a bit in some areas of the country.
>I just wish some of those benefits would show up around here.

The only places it's helped is where the newcomers are warmly welcomed and gently guided by more experienced amateurs. The open hand is usually much better received than the clenched fist. I probably spend at least a quarter of my time on the air teaching, and another quarter learning. Sone of these newcomers have large measures of expertise in related fields. The other half of the time, I'm just shooting the breeze, it can't all be serious and "educational". :-)

3082. CQ Highlights 4/95 Issue

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-10 16:57:00 UTC
From: nw2l@aol.com
Message-ID: <3jq0cs$hd0@newsbf02.news.aol.com>
Source record: 251173

"CQ" HIGHLIGHTS - APRIL, 1995

Antennas are the main focus of CQ magazine's April, 1995, issue -- with five of six feature articles devoted to the topic, plus a review of a new 2-element, 5-band, quad. Here's a look at some highlights:

ANTENNA "EFFICIENCY" - WHAT IS IT?
by Lew McCoy, W1ICP

What's the most important factor to consider in evaluating an antenna -- gain, signal pattern or efficiency? According to antenna authority and CQ Technical Editor Lew McCoy, W1ICP, your anwswer should be "efficiency." But, he acknowledges in an article in the April, 1995, issue of "CQ - The Radio Amateur's Journal," most amateurs "don't seem to comprehend antenna efficiency, or if they do, they seem to dismiss the subject out of hand. This is unfortunate ... I decided to write this article to try to make amateurs more aware of what antenna efficiency really is."
McCoy goes on to explain (in considerably more detail than we can here) that "in amateur radio, efficiency means what one gets out of a circuit in relation to what one puts into it." Antenna efficiency, he writes, is basically a ratio of the power radiated by an antenna to the power lost in the antenna system.
"Suppose we have a rig putting out 100 watts and we feed that power into the antenna. Also, let's assume the antenna has a 3 dB gain. That 3 dB would increase our radiated signal in the antenna's best direction by twice, or 200 watts. Let's also assume that the efficiency of the antenna only has a ratio of 50 percent. That means we lose 50 watts, but because the antenna has 3 dB of gain, we end up with what we started at -- 100 watts being radiated."
The article explains the many factors that affect antenna efficiency, including length, design, quality of parts, etc., and offers advice on

choosing the
most efficient antenna and maximizing the efficiency of the one you
already have.
(McCoy also covers the topic of antenna efficiency in his book, "Lew
McCoy on
Antennas," published earlier this year by CQ.)

Other antenna-related articles in the April issue of CQ include:
"Build
Your Own Gin Pole for 12 Bucks," "Oh No! Not My Antenna!" "The A1M1
Magnum Slingshot" and "A DX Antenna for 160, 80, 40 & 30 Meters," plus a
CQ
review of the Antenna Mart AMQ-2-5 quad antenna.

ham radio today. Celebrating its 50th anniversary in 1995, CQ is written
for the
active ham, with regular coverage of contests, awards, VHF operating,
DXing and
propagation forecasts. It also includes features on antennas, packet
radio,
information for new hams and much, much more.

CQ sponsors several on-air contests, including the grand-daddy of them
all, the
CQ Worldwide DX Contest, plus a variety of awards, including the very
challenging
WAZ (Worked All Zones) and USA-CA (United States Counties) awards. In
addition, there are special activities in connection with the magazine's
50th
anniversary in 1995, including the year-long opportunity to earn the CQ/50
GOLD
AWARD and its many endorsements. (Any active ham can qualify for the
basic
award.)

CQ is available on newsstands and by subscription. For subscription
information,
article proposals or correspondence with editors and authors, write to CQ
Magazine, 76 N. Broadway, Hicksville, NY 11801; or send e-mail to
CQ@genie.geis.com, CQMagazine@aol.com, 72127.745@compuserve.com
or p00259@psilink.com.

3083. Re: NO CODE TECHS GETTING THE SHAFT ON LOCAL REPEA

IW>Listen in on a pileup (or join in) on some rare DX who is working
split
IW>(listening up a few kHz from his transmitting frequency) some time!
IW>Invariably someone will send "CALL?" followed by a chorus of "UP UP"
IW>which seems to invoke someone tuning right on top of the DX which
IW>incites a chorus of "LID LID" mixed in with obscenities.

Zack,
... and all these years I've been told CW filters out all these
people and makes the bands safe for moral purity.

I am, of course, saddened and dismayed at hearing that code has
failed at filtering the fracas. Another cosmic truth has bit the dust.

IB>I consider it an honor that they looked here instead of just ignoring
us all
IB>together. Maybe its just a perk of the hobby that we have the reputation of
IB>being that source of technical expertise and considered by potential employe

Brian,
I wish it were so. I've been in the broadcast industry for a lot of
years and have never heard anyone suggest that we look among the ranks
of Hams for talent. In fact, we're perceived as being behind the times
in our technical expertise. Rarely does a radio or TV station have any
need for CW.

While hams debate the awesome purification power of code, the rest
of the world advances to digital, microwave and fiber.

Rich

The Clear Lake ARC will hold its monthly ARRL VE Exams Saturday March 11th.

When: Sat March 11th, checkin 9am, all tests start at 9:30am

Where: Clear Lake Presbyterian Church 1511 El Dorado Blvd in Clear Lake
Enter the west door of the old church and follow the signs

What: You will need:
ORIGINAL and COPY of most current license
original AND copy of any valid CSCEs
2 forms of ID, one photo
current test fee $5.90 (no charge for Novice)

We have 610 forms and smiling faces to help you get checked in.

For more information:
email biekert@phoenix.net or jheil@phoenix.net
call Jim KB5AWM at 713/486-2032

73 and good luck
Bob

I am trying to set up my FT-530 to operate on my motorcycle, a BMW K75S.
I understand that 73 magazine had a cover story in the April 94
issue covering this subject. Is anyone out there able to mail or fax
me a copy of that article? Please post or email any replies.

I'd also be interested in hearing comments from anyone who has done this.
In particular, I'm looking for headset helps, particularly how to
make one headset work either PTT or VOX, radio mounting tips, and
suggestions for antennas to work without a ground plane. (I'd
prefer NOT to home-brew the antenna, so suggestions for commercial
antennas are preferred.) I do want 2m/70cm ability as well.

73 and thanks in advance.

Greetings,

I've been having trouble locating a rotary potentiometer (around 0-150K ohms). I'm not sure if this is the proper name for it, but basicly I need an infinite turn pot., that is it is not restricted. I've modified a few pots. by removing the limiting barriers, but this leaves an unsavory "gap". If you know a source for such critters, please contact me!

Many thanks in advance,

I have read where the FT-530 has the capability to RX 800 MHz.
Is this true?
Not that it applies to me, because I have a FT-51R.
But I wonder if the 51R can be modified the same way.

thanks,
Dave

3095. GB2RS News 12th March 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-10 19:13:16 UTC
From: dave@llondel.demon.co.uk
Message-ID: <794887996snx@llondel.demon.co.uk>
Source record: 251004
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 12th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

The RSGB London Amateur Radio and Computer Show is taking place this weekend.

And RSGB headquarters will be open to visitors next Saturday.

Today, Sunday the 12th of March, is the second day of the RSGB London Amateur Radio and Computer Show, which is taking place at the Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, in north London. This major annual event features over 100 trade stands, an RSGB book and information stand, lectures, special interest groups and a bring and buy stall. RSGB Morse tests will be available on demand, but don't forget to bring two passport-size photographs along if you wish to take your test at the Show. There will be talk-in stations on 2-metres and 70-centimetres, and doors open at 10.00 am with priority admission for the disabled. Refreshments are available on site. The official 8-page Show guide, which was published in the March edition of Radio Communication, includes a full programme of events and travel details.

Next Saturday, the 18th, RSGB Headquarters at Potters Bar will be open to visitors. This is not a formal open day so there will be no guided tours, but the shack, museum, library and bookshop will be available from 10 am to 4 pm.

King's College London is holding a 'Radio And Communication Day' on Friday the 24th of March, which will be open to the general public. There will be an exhibition, a series of presentations on the development of radio and the unveiling of a plaque commemorating the work of Sir Edward Appleton. There will be an RSGB stand at the exhibition, with representatives available to answer questions about amateur radio and the Novice licence. The 'Radio Day' will be held at King's College Strand campus, located next to Somerset House and close to Waterloo Bridge. The closest underground station is Temple. For further information call Anne Robinson on 0171 873 2696.

Would all G1s please note that they now have a new QSL bureau sub-manager. He is Mr M Marriott, G0OPC, Greenfield View, March Road, Friday Bridge, Near Wisbech, Cambridgeshire, PE14 0HA, who takes over from Mr R Kingstone, G4HHB.

This year is the 100th anniversary of Marconi's first successful experimental transmissions and there will be a number of special event stations and exhibitions on International Marconi Day on the 22nd of April and during the course of the year. At RSGB headquarters in Potters Bar there will be a Marconi exhibition and a special event station, GB100IMD {that is GB one hundred IMD}, at the RSGB's annual Open Day which this year is also on Saturday the 22nd of April. Would anyone celebrating the 100th anniversary of Marconi's work please let us know at RSGB headquarters so we can give your special event station or exhibition a mention on GB2RS.

The new RSGB Liaison Officer for South Gwynedd is Gordon Rogers, GW0RJV, whose address is Maesgwersyl, Garthmyl, Newtown, Powys SY15 6RS, tel: 01686 640611, who is also RLO for Powys. RLOs hold a wide range of information and are available to help RSGB members in their county.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Paraguay, NI5D and KD5IC will sign 'ZP stroke own calls' from Thursday the 16th of March until the 15th of April. Try 7.250 and 14.240MHz.

From South Africa, ZS6YA is signing ZS9RWR from now until the end of May for the Rugby World Cup games. In major contests he will sign ZS9F.

And from Jamaica, K6JAH/6Y5 will be active from now until Wednesday the 22nd of March on 10 to 40 metres, SSB only.

Next the Rally News:

Today, Sunday the 12th of March, is the Wythall Radio Club Rally, at Wythall Park, Silver Street, Wythall, near Birmingham. It features the usual traders in three halls and a marquee, a bring and buy stall, and bar and refreshment facilities. Talk-in is on channel S22.

Next Sunday, the 19th of March, the Norbreck Amateur Radio Electronic and Computing Exhibition will take place at the Norbreck Castle Exhibition Centre, Blackpool. Details from Peter, G6CGF, on 0151 630 5790.

Also on Sunday the 19th, the Tiverton Mid-Devon Rally will take place at Pannier Market, Tiverton. The rally features trade stands, a bring and buy stall and refreshments in two halls. The doors open at 10.00 am. Talk-in will be on channel S22 and further details may be obtained from G4TSW, Mid-Devon Rally, P O Box 3, Tiverton, Devon.

Now for the HF contest news:

The RSGB Commonwealth contest is taking place today, the 12th of March. This contest, which started at 1200 UTC yesterday, continues until 1200 UTC today. Work Commonwealth call areas on CW only and send RST and serial number. The full rules were published in the November 94 edition of Radio Communication.

Next weekend, the 18th and 19th of March, the Bermuda Contest takes place, and the following weekend - the 25th and 26th of March - is the CQ WPX SSB contest.

As usual, HF National Field Day this year will be held over the first weekend in June, the 3rd and 4th. There is a small change to the rules this year - a second receiver will be allowed in both the Open and Restricted sections. That is, you will be allowed to use one transmitter and one receiver (or one transceiver) plus an additional receiver. Note that a transceiver with a built-in second receiver, such as the FT-1000, counts as two receivers. Groups wishing to compete must send details of the site to be used to: David Hill, G4IQM, 14 The Garrones, Worth, Crawley, West Sussex, RH10 7YT, to arrive no later than the 6th of May. The full rules will be published in the April edition of RadCom, but groups wishing to receive an advance copy are welcome to request one from the RadCom office at RSGB Headquarters.

Next some VHF contest news:

Today, Sunday the 12th of March is another event in the 70MHz Cumulative Contest, which is taking place between 1000 and 1200 UTC. The rules can be found in the January RadCom.

And in two weeks time, on Sunday the 26th of March, another 70 MHz contest will take place - it is the 70 MHz Fixed station and SWL contest, and the rules for this contest can be found in the February RadCom.

After extensive consultation that took place with regard to the 4-metres or 6-metres contest debate earlier in the year and at the VHF Convention on the 19th of February, the VHF Contest Committee chairman is pleased to announce that there will be no changes with respect to 4-metres in this year's Field Day, and he would like to thank all correspondents for their input. As a result of this feedback, the VHF Contest Committee is currently looking at ways of promoting new 6-metre and 4-metre events.

Now some beacon news:

G0RDI/P has been authorised as an NBFM beacon on 50.83MHz at Amersham for a limited period of six months. The current power level is 1W and identification is by keyed tone.

GB3WV, the 1.3 GHz ATV repeater on channel RT2R located at Weymouth, Dorset, was taken out of service on the 25th of February.

The Salisbury UHF repeater, GB3SW, on channel RB9, resumed service on the 17th of February.

The Harrow UHF repeater, GB3HR, on channel RB14, is temporarily off the air due to a transmitter fault.

The Daventry UHF repeater, GB3XX, on channel RB13 is temporarily off the air due to a fault with the repeater logic.

GB3HK at Hawick on channel RB14 is temporarily off the air due to a fault with the transmitter PA.

And now the solar factual data:

The period from the 27th of February to the 5th of March saw solar activity at very low levels. Sunspot numbers increased slightly and the geomagnetic activity was mostly unsettled to active. The sunspot indices increased slightly every day from 56 on the 27th to 85 on the 5th, the mean for the period was 71. Solar flux levels up to the 4th varied little day to day and were about 90 units, but on the 5th declined to 84 units. The average for the period was 89 units. Several small sub flares were reported on the 28th and the 3rd. The electron fluence increased from moderate levels on the 27th and the 28th, to very high levels on the 1st to the 3rd before declining to high levels on the 4th. The X-Ray flux remained almost stationary for the period and averaged B1.0 units. The 90-day solar flux average on the 5th was 85 units, one unit up on last week.

Geomagnetic levels were mostly active with the most disturbed day being the 28th with an Ap index of 28 units; the most likely cause was a disappearing filament from the south-west quadrant of the sun on the 26th. The only quiet day was the 3rd with an Ap index of 7 units. The average for the period was Ap 19 units. The state has been 'mag alert' for most of the period. The aa indices as supplied by the British Geological Survey for the period from the 21st to the 27th of February were very quiet up to the 26th. The 25th was down to only 4.8 nanoTeslas. Levels increased to 25.9 nanoTeslas on the 26th and increased again to 'Sub Storm' levels on the 27th with 43.0 nanoTeslas being recorded. The average for the period was 14.9 nanoTeslas, about K2. The monthly RI sunspot number for February was 29.9, with a maximum of 47 on the 22nd and a minimum of 12 on the 8th. The smoothed monthly sunspot number for August 1994 was RI 26.8, +/- 5.

I'll repeat the figures:

Spots - 71; Flux - 89, Ap index - 19, X-Ray flux - B1.0, February spots - RI 29.9.

Now the ionospheric data for Central France

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 24th of February to the 2nd of March, averaged 7.8MHz, the best day being the 26th up to 9.6MHz. Levels declined to 6.8MHz on the 1st due to the high geomagnetic activity. The darkness hour lows declined from 3.7MHz on the 25th to 2.0MHz by the 28th, and averaged 3.2MHz. The daytime highs are taking place anywhere between 10.00 hours and 17.00 hours, with the darkness hour lows between 04.00 and 06.00 hours.

I'll repeat the figures: highs-7.8MHz, lows-3.2MHz.

And lastly the solar forecast.

This week solar flux levels are expected to increase to the high 80s, but solar activity should remain very low. Geomagnetic activity is expected to be at active levels for the next few days and then decline to quiet levels for the rest of the week. Ionospheric MUFs for the south are expected to increase this week from about 18MHz up to 24 later in the week. Levels for the north will be some three MegaHertz lower than the south. The darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Uniform and G7 Uniform Papa series, and Novice calls in the 2 0 Alfa Juliet and 2 1 Delta Uniform series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

[re: Timonium hamfest]

Depends on the weather. The last two years it has been pouring rain
on Sunday and the outdoor tailgate area has been empty. The indoor
tailgate area was full (not as much space as outside though).
The rain seemed to drive away more buyers than sellers; prices
were low on Sunday.

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Croatian,
Turkish, Swedish, Finnish, Russian, Chinese and
Esperanto.

This posting supersedes the one of 24th January.

Recent new material: Turkish 10 Mar 95
Croatian 24 Jan 95
French (Anatole Berthe) 24 Jan 95
Russian (Anna Boris) 15 Dec 94
Esperanto 17 Nov 94

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
10 March 1995

>Some folks have told me you only have to copy 25 characters (in a row) correct
>and you pass. Others have told me there is a 10 question quiz after the code
>is sent.

Both are correct. The test consists of a more or less ordinary QSO
transmission from one station to another. It goes on for about 5 minutes.
You are then given a 10 question fill-in-the-blank test on the content of
the transmission; callsigns, names, locations, type of equipement, etc.
You must answer with spellings as sent in the test. You must get 7 of the
10 questions correct to pass. If you do not pass this 10 question test,
you can also pass if there is anywhere in your copy one minute of perfect
copy; in the case of the 5wpm test, that is 25 consecutive correct
characters. Spaces do not count, but punctuation, numbers, and prosigns
count as 2 characters each. Most VEs allow you to correct your copy before
it is checked; that is, you can go through it, clean it up, and correct
any obvious mistakes. Yes, you should try the 13 wpm test, if for no other
reason to get "warmed up" for the 5wpm test. Best of luck.

Hi there. This is Arata KK5IP.

I'm postiog this for my friend senor Toyoda JA1HTR.

He is a good Dxer and fluent Spanish speaker.
He usually works CW and SSB on HF bands. And he also
works on VHF & UHF packet.

He wants to know BBS stations on some major cities
in South America. Because he wants to exchange
packet massages in Spanish.

If you know some BBS stations in South America,
please send him a packet message or e-mail me.

Thank you.

JA1HTR : JA1HTR @ JL1ZIL.10.JNET1.JPN.AS

Is this right (about C connectors)? I always thought that "C" connectors
were the bayonet variation of "N" connectors. A quick look at
the Newark catalog seems to confirm this.

From Tad Cook, KT7H
Seattle, WA March 10, 1995
To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de KT7H

Average solar flux was about the same last week as the week
previous, although the short term trend has been downward.
Geomagnetic activity was up and down, with days of active levels
followed by a day or two of quiet before more activity.

Solar flux should rise to around 95 after the middle of the month,
followed by a dip again to the low eighties by March 24. Recurring
coronal holes should cause some upset for the next few days, and
again around March 27 to 29.

Sunspot Numbers for March 2 through 8 were 71, 68, 80, 85, 55, 50
and 38, with a mean of 63.9. 10.7 cm flux was 90.3, 91, 89.1, 84.2,
83.5, 84 and 80.8, with a mean of 86.1.

This week's path projections are from Thailand to Hawaii,
Minneapolis and Boston.

To Hawaii, 80 meters should be good from 1100 to 1700z, and 40
meters from 1030 to 1800. 30 meters should be open from 1000 to
1830, and 20 meters from 0700 to 1400 and again around 1730 to 1930.
Check 17 meters around 1800 to 1830 and 2300 to 0800. 15 meters
should be good from 2330 to 0700, 12 meters from 0000 to 0600 and 10
meters from 0030 to 0530.

To Minneapolis, 40 meters should be open from 1130 to 1300z, and 30
meters from 1300 to 1500. 20 meters should be open from 1530 to
2000, and 17 meters around 1800.

To Boston, check 40 meters around 2230 to 2330z, and 30 meters from
2100 to 0000. Try 20 meters from 1300 to 2030.

3104. GROL question pools on-line?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-10 22:06:30 UTC
From: nuke@netcom.com
Message-ID: <nukeD58w2u.Ez5@netcom.com>
Source record: 250988

Although this is not a ham-related question per se,I hope someone here can help me out.

I'm looking for the question pools for the GROL on-line, if they exist. In particular I most need the element 8 pool (radar) but if I could find them all I would be most happy. Maybe even happy enough to format them for use with some quiz-giving software...

Although I will try to keep an eye to this group, please e-mail if you have the scoop on these. If others express interest, I will post whatever I find out. Thanks!

: someone please tell me more about CLOVER? Ken--73's

Clover is a proprietary system made by HAL. It is a complex system that was designed from the start to be used on HF. It uses all sorts of tricks to overcome HF fading, multipath and high noise levels. Details of how it works are too complex to go into here. There have been several articles in the ham magazines on the subject.

The Civil Air Patrol started building a nationwide Clover Network a little over a year ago. I'm the Sysop of one of the West Coast Clover stations. I have to tell you that Clover is slick! It gets through at times when nothing else except maybe CW would.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 MARCH AND FORECAST FOR 11 MARCH - 13 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 09 Mar
Daily Proton Fluence >1 MeV: 5.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.2E+07 (normal)
X-ray background: A7.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Mar 12 Mar 13 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Mar: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 09 Mar
Learmonth 12 4232 3322
Fredericksburg 14 14
Planetary 16 12

Observed Kp for 09 Mar: 1332 2244
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Mar 18 Unsettled to active
12 Mar 18 Unsettled to active
13 Mar 15 Unsettled
COMMENT: IPS Geomagnetic Warning 7 was issued on 5 March and is
current for interval 7-13 March. Observed activity sofar has been
less intence than expected.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Mar normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Mar normal fair poor
12 Mar normal fair poor
13 Mar normal normal fair
Degraded HF comms are expected mainly for high latitude circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
10 Mar 47 15% enhanced, Townsvile was near predicted monthly
values to 15% above, Hobart was depressed 15% then near predicted
with spread F during local night.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
11 Mar 30 15% enhanced during local day then near predicted
monthly values to 15% enhanced at night.
12 Mar 30 About 10% above predicted monthly values
13 Mar 30 About 10% above predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 6 March and
is current for interval 8-13 March. HF conditions are expected to be
degraded for high latitude circuits.

Something doesn't look quite right in the attribution lines above. Anyway,
the C connector has the same surface area as an N, so I don't see
why it would have higher power rating. There is an HN, which is a modified
N connector made to handle higher voltages. EIA flanges are often used
in broadcast applications and on larger cables for their high power handling
as well as ease of pressurization across cable junctions for air lines.

I'll check my Kings and Amphenol catalogs and get back to you regarding
maximum voltage specifications between N, C, and HN.

I had the same problem, and asked a fellow ham here at work for a substitute part. Attached is his reply. BTW, the part I ended up with did work, but even after adjusting the input and output trim capactiors I found that the added gain of the preamp was nearly offset by the increase in the noise floor. Turning up the *audio* gain of my rig was almost as good as turning on the preamp! If you have a choice of devices, look for one with a low noise figure. The one I ended up with had 4db listed on the package, even though it seems it should be 2db.

Good luck,

Greg KD6KGW

Hello Greg,

I hope that you are fine. Thanks for your message regarding the MOTOROLA transistor. "U309". Here is what I have found:

1. Motorola no longer makes that transistor in a TO package, it is now called a S310 or S311 and it is a surface mount device. Their reason for the change "Not enough volume".

2. There is some good news, RCA onder the brand SK makes that same transistor in a TO-72. P/N SK9072/452 JUNCTION N-CHANNEL J FET, VHF/UHF. I would like you to look at the transistor real close (underside) it should have four leads rather than three. The lead closest to the tab counterclockwise is the DRAIN next is GATE 2, GATE 1, CASE SOURCE AND SUBSTRATE. The NOISE FIGURE IS 2dB @ 100MHz on this device.

3113. Replacement for LM170/270/370 Vox/Amp IC

>It looks like the PLL is unlocking. The signal at the output of the

Hi Michael, forget the directions in the manual. Adjust the frequency
to mid-scale pot while transmitting at mid-frequency (146?). The voltage
drop while transmitting is enough to upset the PLL so simply adjust the PLL
while transmitting into a dummy load. Note the unlock points and set it for
half-way in-between. IMO, the receive PLL will lock OK after that step. If
it doesn't, find a mid-way point between receive lock and transmit lock.

The Ramsey kits are fully functional once they are adjusted properly and
modified in accordance with the QST article. I have built half a dozen
of them and learned a lot doing it. If you want full frequency coverage,
email tlcdhconsult@delphi.com for details. Don, KE6AJH, will serve me
a double-scotch for every kit you buy. :-)

FYI Cecil, Windows 3.1 will run on a 80286, 2MBytes of RAM is required.
Use WIN/S to start in standard (not 386enhanced) mode.
With 1MByte of RAM (or less) it is necessary to go back to Windows 3.0
and run in real mode.
I will give the original poster the benefit of the doubt and assume he
was asking for some king soul to transfer software with license
legally too him.

Cecil, you may be 40+ years a ham, (and not speaking for Intel),
but your brusqueness speaks for itself.

>use the "is" method. That is listen for the .. ... (is) and the
information
>after that word is all I need to pass the exam. I doubt if that is true.
>Tnx for any help..

I have taken both my 5 and 13wpm tests. This is the story. You sit down, and the code is sent to you at whatever speed you are testing at for 5 minutes. Then, you take your copy sheet, and you are given a multiple choice test of 10 questions, asking stuff like the sending stations callsign, name of operator, QTH, weather, rig, etc. If you DO NOT pass the multiple choice exam, THEN the VE will check to see if you had 1 minute of perfect copy, which would be 5 words, an since a word is considered to be 5 characters, that is 25 characters in a row perfect copy for the 5wpm test. The same is true on the 13 and 20wpm tests. As for numbers, there are always numbers, and they always count as 2 characters, along with punctuation, an prosigns. Good luck, the hardest part is behind you!

3122. Use AA Lithiums in your HT!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-11 08:25:42 UTC
From: zilch0@primenet.com
Message-ID: <3jrmq6$hok@news.primenet.com>
Source record: 251017

I have an Eveready spec sheet for their 1.5V AA Lithiums (L91 is their product code for these.)

Before getting to the useful stuff, let's look at cold-weather performance of Lithiums:

For a particular flashlight, with a constant load presented by the bulb, the following table shows the number of minutes their Lithium AA's lasted at 21 degrees and -20 degrees Centigrade vs. their Alkaline AA's at the same temperatures:

Alkaline at 21 degrees C: 107 minutes
Alkaline at -20 degrees C: 36 minutes
Lithium at 21 degrees C: 210 minutes
Lithium at -20 degrees C: 192 minutes

Putting aside for the moment the fact that, for the current draw this particular load had, the Lithiums lasted longer than the Alkalines, the more striking, but perhaps less obvious observation is the following:

The alkalines' duration at -20 degrees fell to 33.64% of what they can deliver at 21 degrees (36/107)! The lithiums suffered far less, falling to 91.43% (192/210) of the 21 degrees duration at -20 degrees !!!

Going back to the more obvious difference between the alkalines and the lithiums in this test --> the lithiums lasted longer than the alkalines:

This is not necessarilly true all the time. Other charts in this spec sheet reveal that lithiums far outpace alkalines when the current draw is strong, say 1500 milliamps (that's a lot more than any camera draws, even for film advance motors). But the charts also show that when the current draw is low, say 30 milliamps, the alkalines offer just as much capacity as the lithiums!

Here's another table that illuminates this:

Operating times in hours for various loads, Alkaline AA vs. Lithium AA:

Load Alkaline AA Lithium AA Typical Device
(milliamps) (hours) (hours)

1500.0 mA 0.2 1.4 Handheld Transceiver
1000.0 mA 0.4 2.0 Powered WalkMan Speakers
300.0 mA 4.5 8.2 Flashlight
30.0 mA 72.0 83.0 TV Remote Control
0.3 mA 8700.0 8700.0 Camcorder's Memory

So, check it out -- outside of factors like cold weather use, long shelf life, and of course, a manufacturer's specification to use a lithium for a particular product, there is NO reason to buy a lithium instead of an alkaline unless you have heavy current draining applications. THEN IT'S THE BEST REASON OF ALL! With the heaviest current drains, like HT's on transmit, a lithium that costs roughly twice as much lasts seven times as long! But even at current drains as high as 300 mA (a flashlight?) the increase in duration offered by the lithium is equal to the increase in price -- a factor of 2. It doesn't pay to select lithiums over alkalines unless the drain is greater than 300 mA. Use your alkalines on your HT for recieving, lithiums when you expect to be on the PTT a lot.

Best price I've seen for the Eveready AA lithiums: Home Depot.

I don't work for either company, just sharing my research.

Rich, some amateurs also are advancing into those things. In the 30+
years I've been involved in broadcasting, we've looked favorably on
an amateur license as one indication that potential employees have an
affinity for things technical. We don't want people who just want to
put in their 8 hours and then walk away. We want people who are in
love with the technology, who breathe, eat, and sleep the technology.
They are the most likely to stay current in the field, and the most
likely to throw a lot of energy into their work for us.

It's not always a good indicator, indeed some amateurs are just
modems, but by and large we've found an amateur license a useful
gauge of the degree of commitment to technology that we desire.
To an extent, we look at computer hobbyists the same way. Anyone
with a technical hobby is more likely to be committed to excelling
in a technical field than someone with no non-job related interest
in technical things.

OTOH, we've found that amateurs in general tend to have more than
their share of asocial personalities. They often are intolerant
of other sectors of our business, and often don't work well with
the public. Fortunately, our engineers are kept in the back room
and fed raw meat occasionally, so those personality problems rarely
matter.

Sadly, morality and legality often do not coincide. The medical doctrine
of "at minimum, do no harm" can apply here. If making a call on a police
frequency causes a "officer down" or "officer needs assistance" call to
be missed, then you may be doing grave harm. If you take care to avoid
that, and I'm not sure how you can completely, then the legal doctrine
of "lesser harm" can apply. Given a choice of two actions, both with the
potential to cause harm, the law expects us to take the course likely
to cause the lesser harm. That's a judgement call, and may lead to you
appearing before a judge.

Popping up on a police frequency is a balancing act to be sure. A
more clear case would be popping up on an aeronautical frequency.
Interfering with communications there could cost hundreds of lives.
Is that a good trade for the one life you might potentially save
with your radio call? I hope most of us are moral enough to say
no. But both police and aeronautical services are "safety critical"
services. There is the potential to cause grave harm by transmitting
on either one. We should be very sure we are creating a lesser harm
situation before transmitting on the frequencies of other services.

OTOH, I'd have a lesser compunction about transmitting a distress
call on the local garbage truck dispatch frequency. It's unlikely
that an unauthorized call there would cause a greater harm. If you
must transmit out of band, trying local utility frequencies first
would be good doctrine.

It depends! If you religiously sign as NY9S/7, you'll probably get most,
if not all, of your cards via the 7-land bureau. That's what I found when
operating portable-zero in ND for a year.

On the other hand, it's cheap insurance to make sure you've got envelopes
at BOTH bureaus.

3129. Re: GROL question pools on-line?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-11 12:27:31 UTC
From: drt@world.std.com
Message-ID: <D59zxw.IIv@world.std.com>
Source record: 251025

Mr. Bozo Bus Driver (nuke@netcom.com) wrote:
: I'm looking for the question pools for the GROL on-line, if they
: exist. In particular I most need the element 8 pool (radar) but if I
: could find them all I would be most happy. Maybe even happy enough to
: format them for use with some quiz-giving software...

: Although I will try to keep an eye to this group, please e-mail if you
: have the scoop on these. If others express interest, I will post
: whatever I find out. Thanks!

Side note: W5YI is reporting that question pools for all commercial
license elements will be updated (most of them need it) effective July
1995. You may want to wait until then to create any software. You
still may want to take the GROL before then, since they'll probably
replace most of the questions they lifted from the Advanced and Extra
written exams with more relevant and perhaps more difficult questions.
(Sorry, I don't know of anything on-line.)

: when normal communication systems are not available.

No, it mean that it is not in violation of _FCC_LAW_ to transmit out
of band in an emergency. It says nothing about other laws. If you made the
call in say one of the business bands I doubt anything would happed, not
against FCC rules and no one else would care. But, if you made the call on
say your local or state police freq there is nothing to prevent them NOT the
FCC from from charging you.

: N9HUR
: mudaw@ecom.ecn.bgu.edu

This applies to FCC law, what about local/state law. At least the
way I read it the FCC waives any penality for breaking there rules in an
emergency. Thing being do they have any say over say the state police
charging you with 'disrupting police activities' or some such?

Thanks for the information Bill. I don't think that the Ham
radio community does a good enough job at public relations.
There are so many opportunities that are not taken advantage of.
I really don't know why. I've even offered to help at my local
radio club with public relations but I think the members feel funny
about it. I don't quite understand. It seems the only press that
ham radio receives is when a town has an antenna dispute with a
resident. Have a good day.

Arnold,
Beside the JVFAX pgm, there is a pgm called HAMCOM on bbs's that include a
diagram of the interface.....it also has a transmit circuit. It's very simple
to make and works well with the JVFAX pgm.

B E S T O F 7 5 N E T

3 . 9 7 5 m H z

E V E R Y

S U N D A Y N I G H T @ 7 : 3 0 p m

The Best of 75 Net is a net that meets on 75 meters every SUNDAY Night at 7:30 PM Eastern on 3.975 mhz.

The purpose of the net is to inform and entertain. Each week we have a special guest on the net to speak directly to the amateurs on the frequency. This is a wonderful opportunity to speak personally with these great and knowlegeable individuals in these various fields.

Every so often the Best of 75 Net, has "OPEN LINE". This is again an opportunity for you the amateur radio operator or Short Wave Listener to ask questions or express your view on the net.

Prior guests have included ; WD9HSE Bob Nelson , W5YI Fred Maia, KC9RP Hap Holly, W2NSD Wayne Green and WA6ITF Bill Pasternak

Last week's guest Bill Pasternak went for 2 1/2 hours until the net had to be closed. It was a great success and all involved had a great time. Topics ranged from amateur radio to missing persons.

- -

T H I S W E E K : 3/12/95

J O H N H A R T N 0 O C F E C O M M F O U N D E R

This weeks special guest is JOHN HART N0OCF - FOUNDER OF ECOMM.

John will be speaking on the use of the internet to pass emergency traffic into and out of devistated areas during emergencies such as the recent KOBE, Japan Earthquake.

I am sure John will be taking advantage of this opportunity to recruit some volunteers.

- -

N E X T W E E K : 3/19/95

B O B H E I L - K 9 E I D

If you don't know who Bob Heil is then you definitely need to be a part of this net. Bob Heil is one of the more knowlegable people in the audio field. Bob has introduced a new standard of audio quality into the amateur community. In fact he is the undisputed leader in this area. Bob has many other areas of expertise as well. He is heavily involved in the Home Theatre Industry just to mention the surface. He is also a popular radio and TV personality in the St. Louis area.

Please check into the net and meet Bob Heil.

- -

If you have a suggestion for a guest or question to a guest you may leave it here or post it to my email. Thanks in advance to all who have helped and I look forward to some real fun in the future....

Happy Hamming

DON DON KO4TA

-> >EIA connector will be used. The C connector looks like a N connector
-> >on steroids, and the EIA connector uses a bolted flange. It comes
-> >in several sizes.

-> Is this right (about C connectors)? I always thought that "C" connector
-> were the bayonet variation of "N" connectors. A quick look at
-> the Newark catalog seems to confirm this.

Just top confuse things there is a SC "Screwed C" connector - its like a C
but with a screw fitting. I think one reason that they are used is that
the INNER pin on a 50R sc connector is same size as a 50R C connector and so
more robust that the 50R N inner pin.

And as someone else wrote, the HN.

I bought a 2006 a while back on the "no interest
no payment for 6 months" plan.
On the monthly statement interest kept appearing.

I thought maybe they would refund the charges
at the end as some outfits do.

Finally called today to ask about it because I wanted
to pay it off. When I asked they told me "Oh you had
some small charges.... and that is why there is interest."
This is something that I had kept careful track of. If I
made some small purchases I was sure to make a payment of much
more than any purchases I had made in that month. The
interest was on the entire amount including the "interest
free" purchase.

Anyway the point of this rambling discourse is that when
Rat Shack says "no interest" what they mean is they have
no interest in treating you fairly or living up to their
agreements. So watch your back when at the Shack

If Rat Shack management reads these news groups watch your
mail the four quadrants of my Rat Shack card are headed your
way. You got a few bucks you lost a good customer. Adios

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 MARCH AND FORECAST FOR 12 MARCH - 14 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 10 Mar
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Mar 13 Mar 14 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Mar: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 10 Mar
Learmonth 20 4332 3444
Fredericksburg 15 13
Planetary 15 13

Observed Kp for 10 Mar: 4332 3332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Mar 18 Active
13 Mar 16 Unsettled to active
14 Mar 14 Unsettled
COMMENT: IPS Geomagnetic Warning 7 was issued on 5 March and is
current for interval 7-13 March. Observed activity has sofar been
less intence than expected.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Mar normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Mar normal normal fair
13 Mar normal normal fair
14 Mar normal normal normal-fair
Degraded HF comms are expected for high latitude circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
11 Mar 48 15% enhanced, Townsvile was near predicted monthly
values to 10% above, Hobart was near predicted to 15% enhanced with
spread F during local night.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
12 Mar 30 Near predicted monthly values to 15% above.
13 Mar 30 About 10% above predicted monthly values
14 Mar 30 About 10% above predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 6 March and
is current for interval 8-13 March. HF conditions are expected to be
degraded for high latitude circuits.

: There have once again been a plethora of references to the now infamous
: confiscated HT in San Diego. Below is my entire compendium of pertinent
: posts on the subject, edited somewhat to avoid too much duplication. My
: intent is to deliver the facts as they were reported at the time and
: (hopefully) correct some of the distortions that have crept into the tail.
: :-) I left the .sig's after the appropriate sections to give credit where
: due.

: **********

: The San Diego Sheriff's confiscation of a ham's HT in 1993 is a story
: that could become an urban legend, as has been alleged in the past.
: The fact is, it happened. Yes, it would appear that the San Diego Sheriff
: had no legal authority to confiscate the HT, but the department, with the
: aid of the local FCC Field Engineer, did succeed in coercing Chris to
: "voluntarily" donate his HT to the SD RACES rather than face prosecution.
: The last I heard, the San Diego County Supervisors voted to decline the
: "gift". One thing that came out in 1993 is that at about the same time as
: Chris used his HT on the Sheriff's frequency to summon aid, another person
: was causing malicious interference on Sheriff's frequencies. The word is
: that the two together greatly irritated the Sheriff and drove the coercive
: activity that relieved Chris of his HT.

: Bill Kirsanoff

: There have been two articles in the San Diego Union, they are on the
: bulletin board at HRO. Here is a summary of the first one, I don't have a
: copy of the second article.

: The article states that everyone acknowledges that it was the ``act of a
: good Samaritan.'' but that ``authorities confiscated Chris Boyer's portable
: ham radio last month after he used it to obtain emergency medical help for
: a seriously injured friend.'' It states that he ran into trouble because he
: called for help on a Sheriff's Department frequency that he isn't
: authorized to transmit on. They quote William Grigsby, engineer in charge
: of the San Diego FCC office: ``"Under the regulatory scheme, ... this kind
: of operation by persons who are not authorized is strictly prohibited, he
: is also quoted to say that "We can't have a situation where everyone who
: wants to have a transmitter on the police or sheriff's frequency can, if
: this continues, we're going to have chaos for the law enforcement system."

: It states that Boyer tried to get help on five other repeaters but couldn't
: get anyone, they also tried a cellular phone but couldn't connect because
: they were ``in a ravine, toward the bottom of a canyon''. He then rode up
: the trail a half mile and tried again from a better spot but still couldn't

: get through, at that point they decided to try the SO frequency. The
: article says `` "I look and this guy's bleeding, he's taken a head trauma,"
: Boyer said. "I came on, gave my call sign - I wasn't trying to hide - and
: said, 'I'm a radio amateur with emergency traffic.' The dispatcher said,
: "Go ahead."

: Two weeks later, he got a letter from Bill Kahn (communications
: coordinator) for the SO, telling him to meet with Kahn and an FCC person.
: He was given the choice of having to ``forfeit'' or be prosecuted by the
: federal government.

: There are several quotes from different people including this one
: from county Supervisor Dianne Jacob, who represents that part of the
: county. ``"The frequencies are protected for public-safety emergencies,"
: Jacob said. "Well, this individual had an emergency.''... ``"I think
: anyone in the same circumstances, including myself, would do the same
: thing."

: In the second article I think there was a story about how Kahn had used
: his SO radio to request help when he got hurt while off duty out in the
: back country. I think it also quoted all the part 97.403 and mentioned
: that Chris Boyer now had an attorney and was going to fight to get his
: radio back.

: --GaryM
: --
: Gary Morris KK6YB Internet: garym@alsys.com
: San Diego, CA USA Phone: +1 619-457-2700 x128 (work)

: This was the lead article in Tom Blair's column in the February 17,
: 1994 edition of the San Diego Union-Tribune.

: "In a new bit of tension between the Board of Supervisors and Sheriff
: Jim Roache, the board refused Tuesday to accept a gift to the Sheriff's
: Dept. and told the sheriff to return it. The gift: a portable ham radio
: used last August by a back-country bicyclist, Chris Boyer, to summon help
: for a seriously injured friend. After sheriff's deputies responded to the
: emergency call, they told Boyer he had violated FCC rules by using
: restricted emergency frequencies and ordered him to surrender the
: improperly altered radio to them and the FCC. To avoid further hassle,
: Boyer signed the radio over to the department as a gift. But the
: supervisors, who honored Boyer in December as a good Samaritan, said no
: thanks this week. They urged the sheriff to return the radio to Boyer."

: John WA6ORO

: I KNEW (I actually wished :) he was going to get it back. Now I hope
: it doesn't take the Sheriff Office some years to do it, and not making
: it difficult for Chris Boyer. The tension of the above 2 groups exist
: for many years, when I still lived in San Diego, or so I heard.

: David Tse
: --

: David Tse, VE7MDT Internet: a10554@giant.rsoft.bc.ca
: I will prefer e-mail sent to above address.
: My PO Box is CANCELED, please do not use.

: There were two related circumstances that caused this to get blown out of
: proportion a bit. First, about two weeks before Boyer called in his
: "emergency" on an SO frequency, there was another person who had been
: jamming the SO frequencies using similar equipment, so they were
: particularly sensitive at the time this happened. Second, I have heard
: that Boyer is an engineer for a local radio or TV station and he admitted
: in that meeting with the FCC engineer that he had modified his amateur HT
: so he could use it on his station's commercial UHF repeaters and that he
: regularly used it on those frequencies. I think this second item is why
: the FCC went along with the SO in regard to confiscating the radio because
: it was not type-accepted for that use. I believe the radio is still in
: limbo somewhere, but RACES never did get it. Hopefully, Chris will get it
: back someday. I haven't heard much on this lately though.

: --GaryM

: Alsys Inc. Packet: KK6YB @ N0ARY.#NOCAL.CA.USA.NA
: San Diego, CA, USA Phone: +1 619-457-2700 x128 (voice/fax)

: Well, That's my file on the issue. Remember that the last post in this
: compendium was from spring of 1994. Situations may have changed since then.
: For one thing, I understand the Sheriff lost his bid for reelection. :-)

$*$*$ 20 Weak Signal Challenge (HAM Post) - Now $30 $*$*$

Three weeks have passed since the original posting of this challenge.
During that period, the Web page was accessed over 1000 times.
The weak signal recording has been listen to and processed by
many. Several operators using their best audio filters have been
able to copy my call. And yet, a correct identification of the calling
station has not been made. I am increasing the amount offered to $30
and will continue to escalate the prize until someone cracks the problem.

Details on the challenge can be obtained from my Web page:

http://www.webcom.com/~af9y/

The winner will be announce in the UseNet groups carrying this post
and my Web page.

Final Note for those trying their own signal processing techniques:

Many have asked about the WAV file format used for the
A/D recording. The format is a PC Windows standard which
contains 43, 8 bit-bytes of header (which can be thrown away)
followed by a consecutive series of 8 bit A/D data. The sample
rate was 8192 samples/sec.

Good Luck,
de Mike Cook - AF9Y

One of the local fellows W3PYF has a pacemaker and no amount of RF seems to slow him up or affect him inthe least.

Lord knows we have tried by aiming HTs and even a beam at field day but we just can't drop him no matter how hard we try!

All kidding aside I know he uses 2 meters and 440 a lot even runs a packet radio station. Runs 75 phone from the car at 100 watts and a cell phone too. In his house he runs some SSB on 160, 80 and 40 (once we heard him on 20!) and is the clubs EC so I wouldnt worry about RF and your new pacemaker.
God bless and do what the Dr. tells you. I need all the Soc Sec crowd I can get on 40 phone durring the day to keep me company on the road!

Hi Mike

I would be glad to welcome you to Amateur Radio.
Although I have been licensed since 1959, I feel the No-Code license is a great opportunity to enter this exciting hobby.
Personally, even after running 40 meter CW for over 25 years exclusivley, I would like to see the code requirment above 5wpm dropped altogether.
Maybe even replace it with typing skills test, Hi Hi....

The code really isn't that hard once you get the letters down pat, but why bother, you can always get into the hobby as a tech, and if the code interests you, go for it....

Looking forward to hearing you on the airwaves.

Gary - N0ZOI @ K0PFX.#STL.MO.USA.NA

The C connector is a bayonet style connector that is somewhat like an N connector that has been doing the muscle building amino acids. HN is an N that has definately been on steroids and is/was used by the Air Force for high altitude/high power applications. (I have an HF 1KW PA done by Collins that uses them.) C and N are most definately not interchangeable. However.... If you look at them carefully the N and BNC share the same core. In a pinch you can plug most N males into BNC females without any damage or problems other than there being no mechanical lock holding the connector pair together. The C is quite different, on the other hand. Its centerpin is much larger than the N centerpin. And other dimensions are accordingly different.

I tend to modify ham gear I purchase to use these offbeat connectors. That way I have the satisfaction of knowing that any thief or "receiver of stolen goods" that gets it will have a pain in the backside trying to use it. Small satisfaction I suppose; but, it is better than none. {^_-}

DP>So my questions are as follows. On Field Day:

DP>Can unlicensed individuals operate under the supervision of an
>appropriately licensed control operator?

YEP

DP>In particular, can they operate the Novice/Tech station?

YEP... as long as the control operator is capable of monitoring
the transmission and has control of what's being sent.

DP>Can Novice/Techs operate the 20m station under a control operator?

YEP, again, a properly licenses control operator.

DP>The 1994 rules do seem to suggest that only Novice/Techs should
>operate the Novice/Tech station -- but I assume this is to keep
>higher class license from sandbagging. Is that correct?

The intent is to keep higher class ops from operating under the
guise of Novice/Tech and running the Q's up.

DP>I hope that the rules don't preclude operation under a control
>operator. Last year my son (he was 12 at the time), had passed his
>TechPlus, and was waiting for his license to arrive. He went to
>Field Day, operated under supervision, got completely hooked, and as
>a result achieved his Amateur Extra in September, is just waiting for
>the return QSL cards to show up so he can get his WAS and WAC, and is
>co-chair of Field Day this year. I would like to see similar
>enthusiasm kindled in others this year.

Congrats to your son... and I hope he has a BLAST this year.

>appropriately licensed control operator?

YEP

DP>In particular, can they operate the Novice/Tech station?

YEP... as long as the control operator is capable of monitoring
the transmission and has control of what's being sent.

DP>Can Novice/Techs operate the 20m station under a control operator?

YEP, again, a properly licenses control operator.

DP>The 1994 rules do seem to suggest that only Novice/Techs should
>operate the Novice/Tech station -- but I assume this is to keep
>higher class license from sandbagging. Is that correct?

The intent is to keep higher class ops from operating under the
guise of Novice/Tech and running the Q's up.

DP>I hope that the rules don't preclude operation under a control
>operator. Last year my son (he was 12 at the time), had passed his
>TechPlus, and was waiting for his license to arrive. He went to
>Field Day, operated under supervision, got completely hooked, and as
>a result achieved his Amateur Extra in September, is just waiting for
>the return QSL cards to show up so he can get his WAS and WAC, and is
>co-chair of Field Day this year. I would like to see similar
>enthusiasm kindled in others this year.

Congrats to your son... and I hope he has a BLAST this year.

People!
This hobby is made up of people and people will do some
strange things. Find some who are nice and help. I am
WA9UKH and you can tell from that call that I predate the
no code license. I have met old and new hams that I liked
and disliked. I also happen to be a computer jock and maybe
that helps. Quit bitching and ignore the jerks. There is
room for everyone. The old complaint used to be a guy with
a linear that swept the freq and blew off the QRP people. There
will always be both kinds, not only in this hobby but in life.

I used HostmasterII but didn't like the lack
of features. Talking with others convinced me to try Kagold.
I use a Kam+.

Enjoyed it so much that when I added a PK232 to my setup
I ordered a copy of PK gold.

Some old servos used to use something like this on the back of a motor to
determine the shaft position. Also, this could be found on a radio
direction finder or similar equipment.

The Best of 75 Net is a net that meets on 75 meters every SUNDAY Night at 7:30 PM Eastern on 3.975 mhz.

The purpose of the net is to inform and entertain. Each week we have a special guest on the net to speak directly to the amateurs on the frequency. This is a wonderful opportunity to speak personally with these great and knowlegeable individuals in these various fields.

Every so often the Best of 75 Net, has "OPEN LINE". This is again an opportunity for you the amateur radio operator or Short Wave Listener to ask questions or express your view on the net.

Prior guests have included ; WD9HSE Bob Nelson , W5YI Fred Maia, KC9RP Hap Holly, W2NSD Wayne Green and WA6ITF Bill Pasternak

Last week's guest Bill Pasternak went for 2 1/2 hours until the net had to be closed. It was a great success and all involved had a great time. Topics ranged from amateur radio to missing persons.

- -

T H I S W E E K : 3/12/95

J O H N H A R T N 0 O C F E C O M M F O U N D E R

This weeks special guest is JOHN HART N0OCF - FOUNDER OF ECOMM.

John will be speaking on the use of the internet to pass emergency traffic into and out of devistated areas during emergencies such as the recent KOBE, Japan Earthquake.

I am sure John will be taking advantage of this opportunity to recruit some volunteers.

- -

N E X T W E E K : 3/19/95

B O B H E I L - K 9 E I D

If you don't know who Bob Heil is then you definitely need to be a part of this net. Bob Heil is one of the more knowlegable people in the audio field. Bob has introduced a new standard of audio quality into the amateur community. In fact he is the undisputed leader in this area. Bob has many other areas of expertise as well. He is heavily involved in the Home Theatre Industry just to mention the surface. He is also a popular radio and TV personality in the St. Louis area.

Please check into the net and meet Bob Heil.

- -

If you have a suggestion for a guest or question to a guest you may leave it here or post it to my email. Thanks in advance to all who have helped and I look forward to some real fun in the future....

Happy Hamming

In selecting a repeater antenna it would help to know something about the
location/environment of the repeater site. A moutaintop site subject to
severe icing and winds will dictate different strength requirements than
will a rooftop in Southern California. Also, a moutaintop location will
make pattern downtilt a desireable feature whereas with a lower elevation
site it would be a negative. So, where do you plan to put this repeater?

>can somebody post here a list of "Unofficial Activities" for
>this year's Dayton Hamvention ?

well, don't any information on the events so far, but i'm still
waiting to hear about some of the lesser known events such as
the Miniature Golf Tournament and the Bowling Tournament.
I think they're still looking for a restaurant that can kick out
the volume of food needed for the pizza eating contest.

(wondering just how complex a "connector chaos" event would be at
dayton...EIA to SMA with the most different parts - score by size,
number of different connectors used, SWR bandwidth of the resulting
chain...)

(club event: at the sound of the gun, teams have 2 days to gather all
the parts needed for a project they are handed at the start (no advanced
knowledge of the project..)...winner is the first one done that meets
spec..club gets a suitable prize - test equipment or new set of VHF radios
for the team members or a new "serious" HF radio for the club...)

3188. Re: Out-of-band emergency calls

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-12 21:48:34 UTC
From: wd0hxt@aol.com
Message-ID: <3jvq7i$pa3@newsbf02.news.aol.com>
Source record: 250785

WOW, there sure are a lot of opinions out there.
So let me add to the debate the following:
Part 97 is just that-- "PART"
It is only one small portion of 47C.F.R.
Subparts of part 97 are there to clarify. and outling the guidlines under which a station may be operated as a part 97 station.
47 CFR 97.403 is a standard disclaimer in nearly all parts of Federal law. What is saying is that part 97 alone can not be used as sole justification to prosecute an amateur operator who operates out of band on modified equipment WHEN THAT OPERATION IS JUSTIFIED UNDER LAW.
For example, an amateur radio operator who is the only operator able to copy a distress call on International maritime freqs could, under international maritime distress regulations, respond to that cal because it is allowed under maritime distress regulations. Provided that when an agency that is dually authorized to that freq IS ABLE to provide communications to said maritime vessle the amateur relinquishes his use of the freq to the authorized station. Therefore part 97 DOES NOT PROCLUDE the authorization under maritime law for ANY STATION to provide initial contact.
What part 97.403 DOES NOT authorize is the use of the modified ham rig to contact the local PD in the event of an emergency on their dispatch freq just because it is more convenient for the operator that to use the freqs he is licensed for.
Yes, under current law an amateur radio operator could modify his rig to operate out of band and still be ok. But, when he actually DOES operate it out of band he better make sure that there is NO other means available and that he IS AUTHORIZED UNDER SOME OTHER POINT OF LAW TO CARRY OUT HIS TRANSMISSION, because part 97 ALONE does not give him that authority.
If you really want to know whether you are authorized to do it, get a copy of the entire 47CFR and read it, then throw in a little international maritime regs. Then add some Federal disaster regs. When you have read and understand ALL OF THOSE then you will be ready to decide if you are whithin you rights to transmit on certain freqs under what types of emergency situations.

My name is Ray Hebert. When I was very young(around 4 years old) my parents were divorced and I never heard from my father again. I am trying to make contact with him and wish to solicite your help in this search. My fathers name is James Hancock. He and my mother(Dolores Coody) were married and lived in Pasadena, Texas from 1964 to 1968 approximately. I was born in 1965 in Houston, Texas.
My mother tells me that my father was a very active HAM operator. She also said that he worked at the radio stations in Houston as an Engineer.

I was hoping to find someone who knows of him or has a way of helping me to contact him.
I really would like to meet him after all these years. I have a beautiful wife(Teresa), and three handsome baby boys(Jake-4, Nick-2, Zack-1). I really would like for my boys to know their grandfather.
Any assistance you can offer in this effort will be greatly appreciated.
If my father should happen to read this message, please know that I do not
harbor any ill feelings towards him and wish to make the most of the time we both have left here on this earth to get to know one another.

Thank you,
Ray Hebert

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 MARCH AND FORECAST FOR 13 MARCH - 15 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 11 Mar
Daily Proton Fluence >1 MeV: 7.6E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.6E+08 (moderate)
X-ray background: A8.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Mar 14 Mar 15 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Mar: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 11 Mar
Learmonth 25 5333 4444
Fredericksburg 18 23
Planetary 22 20

Observed Kp for 11 Mar: 4341 3335
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Mar 20 Active
14 Mar 16 Unsettled to active
15 Mar 14 Unsettled
COMMENT: IPS Geomagnetic Warning 7 was issued on 5 March and is
current for interval 7-13 March. Activity is expected to decline
from 14 March to unsettled levels.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Mar normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Mar normal normal fair
14 Mar normal normal normal-fair
15 Mar normal normal normal
Degraded HF comms are expected for high latitude circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
12 Mar 66 15-30% enhanced, Townsvile was 15% above predicted
monthly values, Hobart was near predicted to 10% below.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
13 Mar 50 About 15% above predicted monthly values
14 Mar 45 About 15% above predicted monthly values
15 Mar 40 About 10% above predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 6 March and
is current for interval 8-13 March. HF conditions are expected to be
degraded for high latitude circuits, enhanced conditions are expected
for low & mid latitude circuits.

SB DX @ ALLBBS $OPDX.198
Ohio/Penn DX Bulletin No. 198

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 198
BID: $OPDX.198
March 13, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF & Southeastern Cluster Group, QST, WE1M, N6DCD, W6BJH, AA8SM, K8VJG, N8AC, W8CNL, 4X4NJ, DF4RD, VA3CW, VE7CC and DL7VEE & DXNL for the following DX information.

1995 INTERNATIONAL DX CONVENTION will be held April 21-23rd, at the Holiday Inn in Visalia, California. The Northern California DX Club will host this 46th annual event which represents one of the oldest and best known DX functions in existence. The event will include seminars, DXpedition programs, QSL card checking, exhibits, prizes and is ARRL sanctioned. For more details contact Ted Davis, W6BJH, P.O. Box 494243, Redding, Ca 96049.

3Y, BOUVET ISLAND. UA9OBA will be traveling throughout the Antarctic and Arctic beginning in June. He plans to activate a few new IOTAs in his travels (Nanskian Island and Scott Island). He will end his long trip in late October/November to activate Bouvet Island (AN-002).

4X, ISRAEL. Riki, 4X4NJ, is active daily on 160 meters 20 minutes before and after his sunset. He is usually on or around 1830 kHz and listening up a few hundred Hertz. Riki also mentioned he is looking for the following states to complete his WAS: ID, ND, NV, OR and UT.

4S7, SRI LANKA. Willem, ON6TZ, and Gerard, ON4ASQ, will be active until April 1st. No QSNs have been reported as of yet on the Ohio/Penn Network, so callsigns and band activities are not available.

9H, MALTA. NODXA members Birgit, DL7VTZ, and Holger, DL7VTM, who were recently active from the Congo (as TN2M and TN4U) will be on Gozo Island from March 24th until April 7th, signing 9H1TZ and 9H1TY respectively. They plan to participate in the CQWW WPX Contest (25th and 26th). Activity will be on all bands with 100 watts and wire antennas. QSL via DL7VRO.

9K, KUWAIT. Faisal, 9K2HA, reports that all foreigners in Kuwait must now sign 9K2/homecall as of March 1st. BE ADVISED that some callsigns issued to some foreigners are now assigned to Kuwaiti nationals (ex. 9K2ZZ now belongs to Faisal, ex-9K2HA. QSL via ON6BY). Ray, W8CNL, QSL Manager for 9K2ZZ (before March 1st) reports the following changes as of March 1st:
9K2ZZ is now 9K2/N6BFM ... QSL Manager W8CNL
9K2ZC is now 9K2/KI0K ... QSL Manager KC4ELO
9K2YY is now 9K2/N0YKI ... QSL Manager KC4ELO
Ray also reports that all cards received for contacts made with 9K2ZZ after March 1st, will not be answered or forwarded to Kuwait, so PLEASE check the QSL info with the station you have worked. New cards are being printed for the stations listed above, so PLEASE be patient.

9Q, ZAIRE. Peter, ON6TT, continues to be very active as 9Q5TT. He was heard this past weekend operating RTTY on 20 meters starting around 2030z

A9, BAHRAIN. The DX News Letter (DXNL) reports that Admiral Scotty Redd, USN (K0DQ) is currently signing A92Q and is often active on 40 meters CW. No other details are available because no QSNs are reported on the Ohio/Penn Network. QSL via Box 116, Manama, Bahrain.

CARIBBEAN DXPEDITION. Mark, DL1XAQ, and Ralf, DL9XAT, will be active from four different IOTAs in the Caribbean Sea. They will start from the St. Vincent area (J8) on NA-109 (March 25-27th) and then NA-025 (March 27th to April 1st). They will be active from the St. Lucia (J6) NA-108 from April 1-4th and then from NA-102, a Guadeloupe (FG) island, April 4-8th. Activity will be on 80-10 meters (also check the IOTA frequencies). QSL via homecalls.

J6, ST. LUCIA. Peter, DK1RP, will be active from here, April 11-29th as J6/DK1RP. His activity will be mainly on CW and on the WARC bands. All QSOs will be confirmed via bureau automatically.

PACIFIC DXPEDITION. Tosy, JA6VZB, will be active from three different islands during the month of March. He should be active now from Koror Island (Rep. of Belau) as KC6VW until March 17th. Tosy will be active from Yap Island (Micronesia) as V63BM, March 17-19th. He will then end his activity on Guam as AH0T/KH2, March 19th (length of stay is unknown). His operations will be on all bands using CW/SSB/RTTY, with an emphasis on 160 meters and RTTY. QSL only via the bureau to JA6BSM.

SPECIAL EVENT. The Special Olympics World Olympic Games will be held in July at New Haven, CT. Special Event Station, W1SO, will be located at these games and be active from July 1 through July 9th. It was reported that there will be multi transmitters/operators involving many hams from many radio clubs in the area. More details will be forthcoming.

TI9 PIRATE. A station continues to operate as AA2JS/TI9 and it has been suggested to ignore and not to carry on a QSO with this station. Scott, AA8SM, talked to the wife of AA2JS and she stated that he is NOT in TI9. She also mentioned that a lot of QSL cards are being received and

to inform everyone NOT to QSL this station.

TN, CONGO. A new "YL" operator named Hazel was heard over the past weekend signing TN7OT on 14220 kHz around 1945z.

USCG STATION'S KEY TO GO QRT. U.S. Coast Guard Communications Area Master Station Atlantic (CAMSLANT) "NMN" in Virginia Beach will cease HF Morse code operation on April 1,1995. A final message will be broadcasted on April 1,1995 at 0001z on 5.870, 8.471, 12.718.5 and 16.976 MHz. NMN will issue a special certificate to those who copy the final message. Submit your copy of the received message to USCG CAMSLANT, c/o NSGA Northwest, Chesapeake, VA 23322. Attn: TC3 S. Morales (KP4FFW) (This is taken from QST of March, 1995, page 38).

XF0C, CLARION ISLAND. There seems to be some confusion on what this station counts for DXCC. The answer is "Revillagigedos". Clarion Island is one of Revillagigedos group, along with San Benedicto, Roca Partida and Isla Socorro (which was active last October by a group using the callsign XF4M). QSL XF0C via XE1BEF or Box 231, Colima, Mexico, 28000.

ZD8, ASCENSION ISLAND. G4RWD is reportedly on the air as ZD8WD until September. Not much information is available on this one as far as band activities. (Please send QSNs)

ZS9WRT. This station was not active from Walvis Bay, but was a Special Event Station at the World Rugby Tournament. QSL via ZS6AJS.

EDITOR'S SPECIAL. The next couple weeks may be difficult for me to put out a bulletin due to some personal activites happening. I will try to do my best, but I cannot promise anything. (KYFC!)

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

| |>- The UHF link is being used to evade ISDN phone line charges.
|
| So what? That stipulation was removed from Part 97 some time ago.

It was never in there in the first place. That myth started with an ARRL
"commentary" in one of its publications.

KA-Gold is superior to Hostmaster in a variety of ways not the least of which
include advanced conferencing, online help system, clipboard
cut and paste of text, etc. Bottom line, buy the KA-Gold there is
no way you will be disappointed. I do not work or represent
Interflex in any way, I am just a very satisfied customer.

The following is a QST

A delay in the vanity call sign program, bad checks passed at a
hamfest and electronic fish all highlight Newsline report number
917 coming your way right now!

(*****
VANITY CALL SIGN FORM

There will be a delay in getting the vanity call sign program
underway. This is because the new Federal Communications
Commission form necessary for applying for a vanity call the new
Form 610-V will not be available until after May 1. Because of
this, applications for vanity call signs can not be accepted until
after the form is available. This, even though the effective date
for the new program to begin is March 24th.
Beginning May 1st, FCC Form 610-V may be requested by calling
the FCC Forms Distribution Center at 1-800-418-3676. Hams who
call the FCC to request the form before then will not have their
names recorded and it will be necessary for them to request the
form again, when it is available.
As an alternative you can send an Self Addressed Stamped
Envelope to ARRL-VEC at anytime. Write Form 610-V request on the
outer envelope and it will be sent to you as soon as it's
available.
The FCC says that it will make a public announcement of the
date of opening of the first gate to file a vanity call sign

application. Do not send in any forms until after that date is announced.

(*****
EMERGENCY COMMENTS

The ARRL has filed comments on FCC notices of proposed rule making concerning a proposed new Emergency Alert System in FO Dockets 91-302 and 91-171. The League says that the EAS proposal signals the Commission's intention to integrate broadcast alerting concepts into local and regional emergency response plans, and said that the Amateur Service is a logical partner in providing emergency information to the public.
ARRL assert that Amateur Radio has a long history of providing emergency communication. This, through the Radio Amateur Civil Emergency Service and the Amateur Radio Emergency Service. And the national society says while the Commission proposal cites hams as an auxiliary entity in emergency communication operations, the reality is that the Amateur Service is a principal provider of communication during disaster relief and other emergencies.
The League believes that Amateur Radio must be considered an available resource at all levels of EAS organization. It notes its memoranda of understanding with the American National Red Cross, the Salvation Army, the Federal Emergency Management Agency, the National Communications System, the Associated Public Safety Communications Officers, and the National Weather Service as basis.
The League suggests that EAS participants should be a part of overall emergency planning, not just emergency communication planning. It urges the total integration of Amateur Radio and other radio services into the overall planning.

(*****
SECTION MANGER SPEAKS OUT

And speaking about ham radio in emergency planning, the ARRL's new Section Manager for Alabama wants to see hams in that state unite, regardless of whether they are League affiliated. Tom Moore, KL7Q, was appointed Section Manager following the December 31st 1994 resignation of Ken McGlaughn (pronounced "Mac GLAWN"), KM4JD. One of Moore's first actions as new Section leader was to call a statewide cabinet meeting January 21st. During that meeting, Moore paid tribute to the many hams who, 'though not League members, contribute to the amateur radio service and to their community.
Moore has a warning for hams everywhere. He says the grab for valuable frequency spectrum by businesses with deep pockets will continue to threaten amateur radio.
About 40 amateurs attended the cabinet meeting. Moore's term as Section manager runs through December 31st.

(*****
RUBBER CHECKS

A ham radio con man appears to be at work in the mid-west hamfest circuit. This, with a number of exhibitors at a recent Missouri show duped out of new equipment paid for with bad checks. The person passing the bad paper claims the identity of Frank J. Margita (pronounced "MAR-GEE-TA") of Topeka Kansas, but that appears to be a phony. This, because the real Frank J. Margita passed away in Florida in 1992.
The con man is described as 40 to 50 years old standing six feet tall and weighing about 200 pounds. Witnesses say he has a beard, is very knowledgeable about ham radio. He may claim that he recently passed an Amateur Radio test and is waiting for his call sign.
Among the items that the phony Frank J. Margita paid for with rubber checks was a new Yaesu F-T 890 high frequency transceiver bearing the serial number 211200762. If anyone tries to sell you this radio or a new Midland 2 meter HT at a bargain price, please contact Detective Bill Fisher of the Saint Joseph Missouri Police Department at 501 Farron Street, in Saint Joseph, Missouri 64501.

(*****
STS-67 UPDATE

The SAREX Shuttle Amateur Radio ham station on board the spaceship Endeavour has been working flawlessly, but the same cannot be said for the scientific gear.
Just two days into a planned two-week astronomy mission, the team of orbiting astrophysicists was struggling to point an array of ultraviolet telescopes to the pre-selected celestial targets. Astronaut Ron Parise, WA4SIR told mission control the pointing system was drifting all over the place.
The crew has had to manually point one of the three telescopes, which are supposed to lock automatically on their targets using a computer. Later, Mission Control reported that most of the problems had been resolved with a change in procedures. This, in time for the space scientists to go back and focus on lost targets.
As reported last week, six of the seven Endeavour astronauts have their ham radio license. These include Ron Parise, WA4SIR on his second trip into space. With Ron are Commander Steve Oswald, KB5YSR, Pilot Bill Gregory, KC5MGA, Mission Specialist Tammy Jernigan, KC5MGF, Mission Specialist Wendy Lawrence, KC5KII and Payload Specialist Sam Durrance, N3TQA.
SAREX is being flown in configuration C on this mission. This means its operational on both voice and packet. A record 26 schools from around the world are participating in SAREX with a scheduled contact with the astronauts. Even more will be listening in to the school student's question and answer session with the astronauts.

(*****
IS FCC PLANNING TAX ON MODEM USERS?

N3GPU reports via packet that Baltimore radio station WCBM carried a news story which says that the FCC is developing plans to assess charges for modem users who pass data back and forth with online services such as Compuserve, America Online, Prodigy, and the like. The story went on to say that the proposed user fees could be as high as $6 per hour, and would be charged by the telephone carriers with FCC permission, as partial compensation for the costs of long distance service deregulation. The WCBM story concluded by saying that a similar effort by the FCC several years ago was shelved because of the weight of public comment against it.

(*****
HIGHER BROADCAST FEES

On the regulatory scene, Broadcasters and cable TV operators may face hikes in FCC user fees to pay for 1995 regulation under a new government proposal. VHF TV stations in the top 10 markets would be required to pay $21,540 to the FCC, up from $18,000 a year ago. VHF TV stations in markets below the top 10 would pay between $5,950 and $19,075 for 1995 FCC regulation. UHF station payments would range from $4,775 in the smallest markets to $17,150 in the 10 largest markets. Cable operators could be assessed 51 cents per subscriber, up from 37 cents in 1994. Radio stations would be hit with higher FCC user fees as well. The FCC proposal stems from Congress' ongoing effort to make regulated industries pay for the cost of FCC oversight.

(*****
HDTV

The era of high-definition television has been a long time coming to the United States but 1995 could prove to be a crucial year for those championing the new technology. After years of research and narrowly focused testing, a consortium of companies is putting the finishing touches on a system that is likely to be ready for its last go-round in the laboratory. If all goes smoothly, a special advisory committee called The Grand Alliance could recommend by late summer that federal regulators approve the system as the U.S. standard for transmitting HDTV signals. Alliance members believe that receivers could be available to the public in late 1996 or early 1997. This the same time frame when HDTV broadcasts would be available.

(*****
DX

In DX, reports from the Tokyo PacketCluster indicate that two Laotian stations are currently active. XW2A and XW1BOD have been mainly heard on 20 and 40 meters CW. The two station operate on

20 meters between 23:00 and 01:00 UTC and on 40 meters between 14:30 and 17:00 UTC between 21:00 and 22:30 UTC.
Also, several Japanese sources report that JH1AJT, who was recently active from Bhutan hopes to make a return sometime this summer. Reportedly, he has left all the rigs, antennas and amps in A5 land and plans to go back again to activate the station for a longer stay.

(*****
ELECTRONIC FISH-NAP

And finally, four men were charged in a scheme to poach some electronic fish. That's right, we said fish as in large mouth
bass. This, after some of the protected fish were tracked to a commercial farm through electronic devices implanted by state wildlife officials.
Prosecutors say the men illegally pulled more than 40,000 pounds of the bass from the Potomac River over three years. They then sold the protected fish to wholesalers in the United States and Canada.
But authorities were able to track the poached fish because some had tiny tagging transmitters implanted as part of a study by the Maryland Department of Natural Resources to track their growth and movement. Fish and Game authorities were first tipped to the alleged scheme by a Canadian inspector who saw a shipment at a Toronto wholesaler. After getting the lead, Maryland detectives took a receiver that monitors animal tag transmitters to a fish farm, where they picked up radio signals coming from the breeding ponds.

(*****

And for this week, that's all from the Amateur Radio Newsline.

3198. Sangean ATS-803A for sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 02:06:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.36169.4727.0N1D5238@canrem.com>
Source record: 250794

Hi. I have a Sangean ATS-803A general coverage receiver for sale. Its
the same as the Realistic DX-440.
Its a portable general coverage receiver that receives 150 KHZ-30 MHZ
continuous coverage, receives am sideband and cw, also receives fm and
fm-stereo from 88-108 MHZ.

- can be run from wall adapter or batteries
- internal, telescopic whip, or can be connected to an external antenna
- din plug can be used to hook this radio to a tape recorder,
- with headphones or with your stereo (through the radio's 1/8 inch
headphone jack) you get FM broadcasts in stereo
- rf gain, bfo, bass, treble, balance, and volume controls
- ten memories for your favorite stations
- direct frequency entry via number keys 1-0
- can tune in steps with knob or up/down keys
- will scan for stations/signals
- built-in clock with alarm
- lock switch prevents accidental key presses
- also has narrow/wide receive switch for narrowing bandwidth

I have the radio, the manuals/paperwork for the radio, and the
wall power adapter for the radio. Unfortunately, I cannot
sell the radio with a pair of stereo headphones, but all you
need are your standard walkman type, or anything with a 1/8 in
plug.
This radio is in fine shape, except for a broken telescopic
whip antenna which needs to be replaced. (most of the antenna
is there, but a couple of the end sections broke off a year or
so ago)
Reason for selling: I have one of those great little Sony's,
so don't need this radio.
I'm going to leave the asking price wide open on this radio.
I paid $275.00 a few years ago for it, but have no idea what
they're going for used these days.
Please reply via any of the following methods:
Internet: email to chris.smart@canrem.com
Fido: netmail to 1:229/15
Rime: private/routed mail to ->crs
Phone (voice): 519-756-9389, (just leave a message if I'm not
around)

Thanks,
73, de ve3 sht

3199. Dualband HT HELP??

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 02:06:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.36168.4727.0N1D5237@canrem.com>
Source record: 250795

Ok, once I sell my small HF rig and power supply, I plan on buying a dualband HT. I haven't had any experience with any 2 m or 70 cm equipment for years. The last handheld I owned was an Icom IC02AT; I loved it. I'm looking for something with the following features:
- direct frequency entry via a number pad, (I can't handle those little switches or thumbwheels as I can't see the display)
- 4 or 5 wats output on 2 m and 70 cm
- a hot little receiver that doesn't get constantly overloaded with intermod (I'm in a city of about 80,000 people, so the intermod problems aren't extreme here yet)
- at least 10 memories per band
- CTCSS capability on both transmit and receive, (very important on receive)
- extended receive capability, (not just the ability to make the display go out of band on receive). This would get rid of the necessity for a scanner to monitor the weather stations and a few other frequencies.

Also, what are the battery options on HT's these days? It would be nice to get something better then a nicad pack, such as the NiMH batteries available in most notebook computers these days.
Oh, by the way, I was originally considering just getting a 440 MHZ rig to avoid the conjestion and interfearance on 2m, but I figure I may as well just get an HT with both bands for what its worth.
Please let me know what you're using, approximately what its worth new, what you like/dislike about it, etc. Can you get antennas better then a rubber duck for these things that work on both bands?

Thanks and 73, ve3 sht.

3200. Ham gear for sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 02:06:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.36167.4727.0N1D5236@canrem.com>
Source record: 250796

Hi. I have the following equipment for sale. If you are interested in any of the following, want to make an offer, ask for more information, and so on, here's how to contact me:
Mail addresses: Internet: email to chris.smart@canrem.com, Fidonet: netmail to 1:229/15, Rime: private/routed mail to ->crs.
Phone (voice): 519-756-9389 (if I'm not around, just leave me some voice mail)

1. 15-20 amp power supply.
I have a 15 amp homebrew DC supply for sale. This thing is better built then most of the commertial supplies I've seen/used, is very solidly constructed, doesn't get more then slightly warm when supplying 15 amps at 13.8 volts DC.
I didn't build it, but I can certainly atest to its high-quality. The four big transistors at the back are rated at 5 amps a piece, so it'll probably put out close to twenty amps if pushed. DC voltage is also variable; (currently set to 13.8).
I'm looking for about $80.00 Canadian funds for it, since its in absolutely great condition, and was hardly used. (price is negotiable)
Reason for selling: I am saving up for a decent acoustic guitar, a dualband HT, and other things.

2. Ten-tec Argosy II

Yes, I'm parting with it, after 6 years of great performance.
Features: extremely small solid-state rig; great beginner radio for people with a low budget, perfect for mobiles, a great backup rig for emergencies or up at the cottage.
- 5 or 50 watts ssb and cw,
- transmits upper and lower sideband, cw, (automatically ofsets transmitter when switched over to cw)
- transmits and receives on 80, 40, 30, 20, 15, and 10 metre bands. (10 m is split into four band selections, 28.0-28.5, 28.5-29.0, etc.)

- great notch filter for eliminating carriers
- digital readout for frequencies, power/swr/signal meter,
- comes with Ten-tec power supply, d-104 desk mike that looks aweful but is a perfect match with this radio,
- also comes with voice readout for frequencies, (great for white-caners like me)
Reason for selling: I'm just not interested in keeping this thing around any more. I have almost lost all interest in HF, and will buy a better radio when I get back into the low bands. Furthermore, as I mentioned above, I need the money for other things.
History: For the first year after I purchased this radio, I was

constantly replacing fuses in the power supply, and the radio was pretty warm even with almost perfect swr readings. Then, the voltage regulator went for good in the power supply, blowing the two big transistors in the finals. $138 later, the supply and radio were fixed, and I have had no problems since. No blown fuses, no overheating problems, etc. It works great, except for the following minor problems. The plastic knob on the
mode-change control can be removed by simply sliding it off its post. There is no longer a knob on the notch filter control, but this could be easily remedied. Also, the RIT control needs to be lined up again. In other words, when the RIT control is in the middle of its range (transmit and receive are on the same frequency supposedly), transmit is down the band about 1.5 KC's from where the receiver is. I just turn the RIT to correct this, but its annoying having to have it permanently set wrong.
I'd like $450.00 or best offer for this rig, power supply, voice readout, d-104 mic. I still have the manuals and paperwork as well. If you don't want the d-104, I'll probably just throw it out as its so beat up.

My rig (a TS850) gives me the choice of using "Full Breakin",
"Semi-Breakin", or
no breakin at all by just putting the rig in send mode.

How does one decide which of these to use and when?

Is one less hard on the rig than the others?

73, Kris

-> Thanks.

What's there to know?
Get on just about any repeater pair and there is a repeater on it. =)
Here are my few suggestions:

1. Get an ARRL Repeater Directory.
2. Be sure that your radio can TRANSMIT PL tone (CTCSS).
3. Be sure that you can program it.
4. Listen for a few moments on a freq. Many repeaters have voice
ID which will tell you which PL TONE to use.

Have fun...

>How does one decide which of these to use and when?

The short answer is whatever seems right for you. It would be hard
to imagine any QSO today where no break in would work very well, you
would have to be fast on the switch if any quick question was asked
and you would not know when you were being clobbered while transmitting.
Of course, it is how things went 30 years ago :-) .

Some really like semi break in with a comfortable delay because you
hear less band noise and that makes some happy. However, you will
often not hear anyone QRM'ing you or if the other station has a
fast Break you will not notice.

I prefer full break in because it allows me to monitor the frequency
while I am transmitting, and I can have more natural conversations
on CW as we can fast break each other with comments and questions,
or QSY if someone moves in. It is a bit like the fast VOX guys that
like to speak to each other in more natural conversation mode, quick
questions and comments go back and forth, not a long monologue
followed by another.

My advice - try the different break in modes and see what you like.

>Is one less hard on the rig than the others?

Funny question, but it does make sense. I suppose the t/r relay or
diodes will have more use with semi break in than with none, and more
with full break in than with semi break in, but I have never (in 25 years)
had my t/r switching fail on me. It is like turning the radio on and
off. If you notice, more wear and tear on all radios with the on/off
cycle. Therefore, you can minimize that wear and tear, but then you
minimize its normal use or maximize the heat wear and tear, etc.
Tradeoffs. But the radio is designed to be turned on and off, and the
radio was designed for either break in mode. Just try them.

> have told me there is a 10 question quiz after the code is sent.

Eddie - congratulations on your progress. Some of the "it's impossible to learn CW" people should read your post.

I'm an examiner for the ARRL-VEC and give code tests all the time. I can't speak for other VEC's but I can tell you what the ARRL exams are like. Each test consists of a 5 minute (plus or minus) transmission that resembles one side of a CW contact, at the beginning right after the QSO has started. For example,

W1XYZ de K0ABC tnx for qso ur rpt 579 ....

it will then go on to give the person's name, qth, type of radio and antenna, and maybe some other details such as occupation, how long he's been a ham etc. How much of that sort of detail is there will depend on whether it is a 5, 13 or 20 wpm test. They then repeat the call signs at the end.

You can pass the test in either of 2 ways: pass a 10-question test (7 out of 10) on the content of the transmission, or have 1 minute of solid copy (25 characters at 5 wpm, 65 at 13 wpm, or 100 at 20 wpm). The written test may be either fill in the blank or multiple choice (that is up to the discretion of the exam team - mine will not give multiple choice, just fill in the blank). Solid copy is counted as 1 character for each letter, and 2 for each number/punctuation mark/prosign. My own experience is that far more people pass on solid copy than pass the 10-question test.

Hope this answers your question, and good luck on your exam. Hope to hear you on HF! 73 - Alan NS0B

SimTel/msdos/hamradio/
sdi700.zip Super-Duper for IOTA by EI5DI - Contest Logger

SDI v7.00 is a contest loging program for the RSGB Islands On The Air
contest which takes place each year on the last weekend in July. It is
based on SD, the contest logging program for the major international and
dozens of smaller contests worldwide. It was used by the winners of both
the 1993 and 1994 IOTA contests and includes an IOTA reference file. SDI
is easy to use because no multiple keystrokes are needed for any of its
logging or editing functions.

Special requirements: None

Changes: Updates and bug fixes in line with SD. Improved data entry
compatibility with other contest loggers.

sdi700.zip has replaced sdi537.zip.

Mailbox operation on 40 metres

>From Col VK2CTD.

You will be aware that I have been transmitting an edited cw
version of the broadcast each sunday after the 40 metre
callbacks. This service was intended to help those stations
who might have missed some of the cast because of poor
propagation at the present time. I am now in a position to
leave my system in an amtor/pactor mailbox configuration after
the callbacks. The system has been tested with Jim VK2BQS and
it worked fine with him.

If you were unable to copy the cast because of propagation or
just couldn't make it at broadcast time, please call in on
amtor or pactor on 7042khz, once connected just follow the
instructions from the mailbox. The broadcast will be entered
into the mailbox as a message addressed to ANARTS and
identified as the current cast number.

I would appreciate it if one of the stations copying the rtty
cast gives it a try out. The mailbox will be left on till
approximately 7 pm local EST. This service will take over from
the cw cast which will now discontinue. If the service proves
popular I will leave other files in the mailbox such as
amtor/pactor frequency lists.

Because of the complex software of the program being used, it takes sometime to load the cast into the mailbox, so please wait about ten minutes after the callbacks before attempting to connect.

Finally, I take this opportunity to thank Clem VK6CW for his assistance and technical advice in setting up the mailbox. Thanks a lot Clem.

Cheers from Col

IPS WEEKLY REPORT
---
03 MARCH - 09 MARCH

DATE OF ISSUE: 10 MARCH 1995

DATE 03 04 05 06 07 08 09
10CM 91 89 84 84 84 81 78
A 5 14 16 5 3 4 (12 ESTIMATED)
T -3 12 -29 32 33 40 38

SOLAR ACTIVITY WAS VERY LOW ON 5TH, 7TH AND 9TH MARCH, AND LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO UNSETTLED 3RD AND 9TH MARCH. FOLLOWING A SUDDEN IMPULSE OBSERVED AT APPROXIMATELY 0129UT ON 4TH MARCH, THE FIELD WAS AT UNSETTLED TO ACTIVE LEVELS, REDUCING TO UNSETTLED ON ON 5TH, AND QUIET 6TH-9TH.
IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY RANGED FROM NEAR PREDICTED MONTHLY VALUES TO 15 TO 30 PER CENT BELOW ON 3RD TO 5TH MARCH, THEN BECAME ENHANCED TO 15 PER CENT ABOVE FOR THE REMAINDER OF THE WEEK.

FORECAST (10 MARCH - 16 MARCH)

SOLAR: VERY LOW.

GEOMAGNETIC: 10 TO 13 MARCH ACTIVE TO MINOR STORM, THEN QUIET TO UNSETTLED.

IONOSPHERIC: 10 TO 13 MARCH DEPRESSED 5 TO 15 PER CENT, THEN NEAR PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

VK2SG RTTY DX NOTES FOR WEEKENDING MARCH 3RD 95(BID RTDX0303)

Our thanks this week go to: ZS5S, W2JGR, WB2CJL, WX5L, W5ZPA, W5KSI, K5ED, AA5AU, WS7I, RK9CWA, 5R8DS, IK0FVC, I5IGQ, I5KG, I5KKW, DJ3IW and the Central Europe DX Cluster DB0SPC, the K5NV DX Packet-Cluster and IK5PWJ PacketCluster.

BANDPASS:

NOTES OF INTEREST:
SPRATLY, 9M0. Francesco, IK0FVC report that from 29th March to Apr. 3rd some JA's & 9M6's guys team will be active from Layang Layang Island located in the Spratly (AS-051). The call should be 9M0A, operation will on all bands and modes (NO satellite).

CONWAY REEF, 3D2. The call sign assigned to this DXpedition are 3D2CU for CW and RTTY and 3D2CT for SSB. Trip plan to start on March 24 till April 3rd.

MADAGASCAR, 5R8. A German group is active from February 25 till March 10. Calls are 5R8EH (qsl to DL5UF), 5R8EI (qsl to DL2GBT) and 5R8EJ (qsl to DF5WA). They will work on all bands from 160 to 10 meters (including WARC) on CW/SSB/RTTY.

GUERNSEY, GU. To celebrate the 50th Anniversary of Liberation from Occupying Forces, a special event station will run from 7 to 13th May 1995 with call GB50LIB. On May 9th will be 24 hour operation. Activity is on all HF bands CW, SSB and RTTY.

SOUTH SHETLANDS, VP8. While Thomas, (DL7VTS) DP1KGI op. is now on route to home, VP8CQS Andy on Arctowski Base should get soon the rtty gear (loaned from IRDXA) from Punta Arenas Chile.

The VK2SG RTTY DX NOTES are available on Internet via Telnet or FTP at ab6z.ampr.org. The directory is called \rttynote.
For next week's bulletin send your bandpass to Jules, W2JGR AT W5KSI.#NOLA.LA.USA.NA.

Dx & IOTA Tidbits No.183

March 3, 1995

Editor Thomas Bevenheim, SM0CNS/DU7
Villa Sea Q, Ronda
Cebu Island 6034
P h i l i p p i n e s SM0CNS AT N0JN.EVIS.PHL.OC

Others tell you where we've been; Tidbits tells you where we're going! Contributions and suggestions are always welcome.

Contributers this week: 4X4NJ, DL2GAC, DU7IDF, G4DYO, H44MS, K3ZO, N0JN, N7ET, KB8NW, OM2DX, SM4EMO, VK4AAR, XE1BEF, XW1 & WB2CHO.Thanks!

S0... WESTERN SAHARA Tim (KC0PA) operating SSB (only) on all bands. QSL will be handled up on his return home in August. Address see below!

XF0.. REVILLAGIGEDO Hector (XE1BEF) will again operate XF0C from Clarion Island on March 3-18. He will operate on CW, RTTY and SSB on all bands 160-6 meters, QSL to XE1BEF.

XW... LAOS Zorron, XW1 appeard on 14195 kHz last Friday, with this very short callsign XW1 - no suffix! He presented himself as 'a Japanese tourist in Vientiane', asking for QSL via JH1AJT.

Fred (K3ZO) writes: "Those of you worked A92Q, that is Admiral Scotty Redd, USN, K0DQ, who now commands our naval forces in the Persian Gulf/Arabian Gulf area. He used to turn in top-ten performances regularly in the CW Dx tests from the station of W3GRF."

Events Calendar

Mar 18-19 DARC World-Wide SSTV (12-12z)
Mar 18-20 BARTG Spring HF RTTY (02-02z)
Mar 25-26 CQ WPX SSB Contest (00-24z)
Apr 7-9 Ham Radio/DXPO Atlanta (Georgia)

Silent key

We regret to announce the passing of Victor Cole, VK2VL, of Sussex Inlet.

Vic was first licensed in 1936 in Sydney and had lived on the South Coast since 1978. He was an active WIA member all his amateur life and served a term as Divisional President.

VK2VL took a large part in the reactivation of WICEN some years ago. Since moving to Sussex Inlet he acted as South Coast WICEN Co-ordinator for many years and was also very active as radio operator and equipment officer in his local Coastal Patrol.

Our sympathies are extended to Lillias and to Barbara, Barry and their families.

Vale Vic Cole, VK2VL.

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin VK2PFQ

Apologies for no Presidents Report last week but I was busy preparing for a trip to VK5.....No not at the Institutes expense, but for other reasons although I won't say Amateur Radio was not discussed. Whilst I was away the matter of Amateur Radio Licence fees were debated by the Federal Parliament. But more on that in just a moment. Since it contains the actual motion before the Parliament you might like to tape record it as I read it to you. The full implications of these motions may not be entirely clear when you first hear them. Record them and replay them at your leisure. I'll give you plenty of warning when I'm about to start.

Those of you that attended the Wyong Field Day and visited the WIA stand would have been asked to sign a petition against any increase in Amateur Radio Licence fees. You will recall that I said on a previous address that these things are really not worth the paper that they are written on.... There where a few blokes I asked to sign who reminded me of that....."But you said these things were useless?????" They cried. Well I haven't changed my mind... they are still useless.....The sole purpose of the exercise was to gauge, in real terms, the magnitude of the opposition. We collected over 500 signatures in around seven hours. A little over one signature per minute. Considering most Amateurs wanted to "chew the fat" as well I think your Council did pretty good.

Another of our efforts on the day was that we successfully stuck the same number of people, if not more, with a sticker. The messages on these were "FEE FREE AMATEUR RADIO", "VK2 DIVISION PUTTING YOUR CASE TO THE GOVERNMENT" "FIGHTING THE FEE HIKE", "PROUD TO BE A MEMBER", "THERE IS REALLY NO ALTERNATIVE"....Pretty innocent stuff you might say. No, not really. Devious might be a better word. What we really set out to do was to put the logo of the WIA on as many chests as we could..... We succeeded in adorning around 652 chests. Each sticker bore a "watermark" WIA logo behind the message. Great advertising don't you think? What do you suppose was the most popular sticker??? It was the one that said...."PROUD TO BE A MEMBER". It was most reassuring when people came up and DEMANDED to have one of these stickers. Thanks to everyone who supported us on the day.

Another exercise was to distribute a pamphlet entitled "What's going on in the VK2 Division". Obviously this contained an up to date status report of Divisional Activities. I wish to thank all members of Council who helped staff the stand on the day. The Council is so different these days I should probably list them all for you. Those present on the day were Peter Jensen VK2AQJ, Eric Van De Weyer VK2KUR, Pixie Chapple VK2KPC and her husband Henry, Peiter Kloppenburg our hardest working Councillor VK2CPK and his Sister who was visiting him from Holland, Ian Rosser VK2XB, Tony LIOLIO VK2ZLT, Eric Fossey VK2EFY. Peter Naish VK2BPN our Federal Alternate Councillor and Cesar Miranda VK2TCM.

There was a great deal more activity on the WIA stand this year than there was last year. I stress the word STAND....you'll recall that John Robinson was busy selling FM828's from the back of his Kombi van somewhere else. Apart from his input the WIA stand was EMPTY . ... OH, by the way if anyone wants/needs any spares for those 828's some will soon be available...so place your orders NOW!

The pamphlet and stickers were prepared with the assistance of CESAR MIRANDA VK2TCM and RICHARD MURNANE VK2SKY. It's easy enough to write these things and think up a few clever stickers but thoughts cannot be put into action without people who have the necessary Computer skills, the software and the machinery to produce a professional final product..... and all this.. FOR FREE!! I'd hate to think what it would have cost had we had we payed to have it done.

By now everyone would have received their copy of AR magazine which contained a copy of our submission to the Government concerning the proposed increases to Amateur Radio Licence fees. Thanks once again to all those involved in the preparation of this material, particularly the Veterans group...and I've forgotten that list of helpers once again Franklin....Sorry! Thanks also to the Editor and Publishers of AMATEUR RADIO ACTION for printing our submission in its entirety. I warned those of you that don't get AR to reserve your copy of Amateur Radio Action...Didn't I!!. Amateurs who are on a "NO Magazine" subscription will receive their copy hopefully by the end of the week.

Some people are very concerned as to the progress of our legal situation as a result of the last election... and rightly so. You will recall that I told you I had written the Deposition over the Christmas break in an effort to save money. It would have been in court by now had we been able to find all the relevant documentation.....BUT WE COULD NOT!!! The minutes of the meeting held at Doonside last February...In case you have forgotten that was the one called to debate a motion of no confidence in the Council of the day...Well the minutes of that meeting were NOT in the Official Minute Book. This has delayed us for a little time. Our inquiries eventually revealed that the minutes were left at Parramatta...there is no truth in the rumour that they were left...ON THE SAFE!!!! Anyhow we found them at the offices of the Secretarial Service which was used by the former Secretary. Thank God for that!

Again I make no apology for placing blame upon the person or persons who are responsible for these sorts of reprehensible actions. The next problem that this Division will face is that there are NO MINUTES IN THE MINUTE BOOK FOR THE LAST ANNUAL MEETING!!!!! There are none at the Secretarial Office I previously mentioned. They were not in the files... SO where are they????? At the council meeting next Friday night I intend moving that an appropriate letter be forwarded to the person responsible for preparing these Minutes. This is very very serious situation. Can anyone assist us with a tape recording???? PLEASE. This is a sincere request. I'd hate to think where this will place the Division if we not able to come up with this very necessary piece of paperwork. Really....Where will this ever end?.....and some people wonder why I criticise members of the previous Council. This Council will not take the blame for the mistakes of others. OK now on to the Business of those Licence fees.

I will now read for you the speech as delivered in Parliament on the 8th march 1995. It was previously mentioned in Parliament on 8th December 1994...It is headed up...

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE TAX) AMENDMENT BILL 1994

Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX) AMENDMENT BILL 1994
RADIOCOMMUNICATIONS TAXES COLLECTION AMENDMENT BILL1994
Second Reading

MR. ELLIOTT (Parramatta-Parliamentary Secretary to the Treasurer) (7.10p.m.) I move:

That the bill be now read a second time.

This bill is one of a package of three bills which ammend the radiocommunications tax ;legislation to implement improvements to the radiocommunications apparatus licensing regime following the findings of a public inquiry held by the Spectrum Management Agency. The full detail of the amendments in the package is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994.

This bill amends the Radiocommunications (Transmitter Licence Tax) Act 1983 to support the proposed changes by providing for tax to be imposed in relation to transmitter licenses in various situations to give effect to the policy of giving applicants for licences greater flexibility in organising their licence arrangements.

The financial impact of the package of bills is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994. I commend the bill to the House.

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX) AMENDMENT BILL 1994

This Bill is one of a package of three bills which amend radiocommunications tax legislation to implement improvements to the radiocommunications apparatus licensing regime following the findings of a public inquiry held by the Spectrum Management Agency. The full detail of the amendments in the package is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994.

This bill amends the Radiocommunications (Receiver Licence Tax) Act 1983 to support the proposed changes by providing for tax to be imposed in relation to receiver licences in various situations to give effect to the policy of giving applicants for licences greater flexibility in organising their licence arrangements. The financial impact of the package of bills is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994. I commend the bill to the House.

RADIOCOMMUNICATIONS TAXES COLLECTION AMENDMENT BILL 1994

This bill is one of a package of three bills which amend the radiocommunications tax legislation to implement improvements to the radiocommunications apparatus licensing regime following the findings of a public inquiry held by the Spectrum Management Agency. The other two bills in this package are the Radiocommunications (Transmitter Licence Tax) Amendment Bill 1994 and the Radiocommunications (Receiver Licence Tax) Amendment Bill 1994.

There has been some concern by some apparatus licensees, particularly amateur radio operators, that changes proposed as a result of the Spectrum Management AGency's public inquiry will lead to significant licence fee increases. Changes to the fees for Amateur radio operators are part of broader changes to apparatus licences. Under the proposal contained in "Inquiry into the apparatus licence system; a new outlook", released in February, the fees for apparatus licenses are to be based on a combination of the administrative and maintenance costs of issuing the licence and a tax component based on the value of the spectrum used.

Many apparatus licence users will see fee reductions under this formula, including the Royal Flying Doctor Service, state governments and taxi services, but some fees, such as amateur fees, were likely to increase under the draft proposal, as published. Most amateurs

were paying $37 per annum but under the formula being applied to apparatus licences in general. their annual fee would have risen by between $8 and $34 to a maximum of $71.

As part of the implementation processes for establishing a new apparatus licence regime, it has always been intended that a final round of consultation would take place before fees were set. I am pleased to announce that the SMA has further considered the level of fees to be applied to amateurs in the light of the public benefit that amateurs provide to the community, and that a lower overall fee is now proposed. In view of the training and experience in communications technology that amateurs provide to young people, and the roll that amateurs provide in maintaining communications links in time of emergency, the SMA has decided to reduce the tax component of the licence fee to the minimum level. This will reduce the fee from the proposed $71 to $51 per annum. The fee would be applied to all amateur licences.

While $51 represents a small increase on fees paid for many years by amateurs, the new fee is based on the administration and maintenance services provided to this group by the Spectrum Management Agency, including the cost of issuing the licences, managing interference to their services, issuing and registering call signs, accrediting examinations, and representing amateur interests in international negotiations. It also represents a reduction of $20, or 28 per cent, from the draft fee proposed prior to the most recent round of consultation.

While there are social benefits of amateur radio, the fee set at $51 represents more than fair value for their access, and ongoing use of large amounts of radiofrequency spectrum. The change in the level of amateur fees will not be offset by any increase in the fees paid by other radiocommunications licensees.

As part of its inquiry processes into apparatus licences, the SMA invited submissions from the public. A total of 422 were received. They covered a wide range of issues and provided a mix of views on how the apparatus licence system could be improved. Submissions were made by individuals and a range of organisations. The Wireless Institute of Australia, other amateur groups and many individual amateur licensees made submissions to the SMA.

A majority of submissions to the SMA's inquiry supported the issuing of apparatus licences for periods of up to five years, and greater flexibility for licensees in relation to the payment of licence fees, either by full up-front payment, or by annual instalments which may or may not be equal. With the commissioning of its new licensing computer system in March 1995, the SMA will be in a position to issue apparatus licences for terms of up to five years.

The proposed bills wil give spectrum users greater flexibility in organising their licensing arrangements. Under the amendments

proposed in the three bills, an applicant for an apparatus licence or a licensee will be able to choose between the following tax options;

(i) for an apparatus licence issued for a period a 12 months, payment of the annual licence fee current at the time the licence is issued;

(ii) for a licence issued for a period of more than 12 months, payment at the time of issue of the total licence fees;

(iii) for a licence issued for a period of more than 12 months, payment of an annual instalment upon issue and on each anniversary of the date of issue during the term of the licence; or

(iv) for a licence issued for a period of more than 12 months, where the licensee has previously elected to pay by annual instalments, and then decides to pay the balance of the licence fees, payment of the balance on the next occurring anniversary of the issue of the licence.

The Radiocommunications (Transmitter Licence Tax) Amendment Bill and the Radiocommunications (Receiver Licence Tax) Amendment Bill provide for the imposition of tax under each of there options.

The Radiocommunications Taxes Collection Amendment Bill amends the Radiocommunications Taxes Collection Act 1983 to set out the time the tax becomes payable under each option.

Where a licensee defaults on a payment of tax, the licensee will have failed to comply with the act, which would allow suspension or cancellation of the licence.

The Radiocommunications Taxes Collection Amendment Bill includes an amendment which will enable the SMA to determine that an interest penalty is payable by a licensee who is paying tax upon each anniversary of the issue of the licence, but does not pay upon the due date for an anniversary. Such a determination will be disallowable by the parliament.

The Radiocommunications (Transmitter Licence Tax) Amendment Bill and the Radiocommunications (Receiver Licence Tax) Amendment Bill include a provision which will impose tax if a default persists for 60 days following the anniversary payment due date. The amount of tax would reflect the total amount payable over the remaining period of the licence

It is not possible to make a firm estimate of the financial impact of the proposed amendments as it is impossible to estimate accurately what percentage of licensees will take up the option of apparatus licences of more that 12 months when that option is made generally available to licensees and, of those, what proportion will elect to pay the full fee up-front, rather than pay on each anniversary during the currency of the licence.

The overall intention for the legislative package is to provide more flexible methods of paying licence fees for licensees, with no net

loss of revenue over the period of the licence. I commend the bill to the House.

Well there you have it $51 not $71 for an Amateur Radio Licence. Is this good news.....I'll let you be the judge. Some interesting points arise from this information:

(i) There will now, under this proposal, be no different fees as was proposed...i.e. Full, Novice and Limited will all pay the same.

(ii) Full calls...$20 cheaper..Proposal was $71
(iii) Limited and Intermediate...$19 cheaper...Proposal was $70
(iv) Novices and Novice Limited..$6 DEARER ...Proposal was $45
(v) Discount equals the total amount payable under the original Proposal

Observation: This is as I told you way back in December a "CONSUMER TAX".....Nothing else. This Division will not accept this proposal lying down. The fight is not over......Consider this.... The lower house does not sit again for another TWO WEEKS!!!! If I am not mistaken the matter has to go to the upper house for ratification. Hmmmmmmmmmm!!!!!!

THE GOVERNMENT DOES NOT HAVE THE NUMBERS IN THE UPPER HOUSE.....THE OPPOSITION with the support of the minority parties can beat this. SO....get your pens and pencils out again....Write to those opposition people AGAIN. This division will write to the leader of the opposition and enlist his help. The ball is once again in our court. It is not as if I'm ungreatful for the reduction in fees. I only wish some of those Politicians had taken the trouble to answer our letters or even given us a 'phone bill... It's really those CB'ers getting off scot free....That's what grates on me as an Amateur.

Next week more on who said what to whom. Obviously this will have to be a condensed version. I deliberately read the addresss of the member for Parramatta so that everyone could understand exactly what the Government is proposing. You know its a pity that this Division and its members can't vote as a block in a Federal otherwise our Mr Elliot might just have to look for another job.

As a final note..... This Division has not received anything regarding this $51 proposal from the Federal Division, the Federal Media Liaison Officer, the Federal President OR the SMA. Hmmmmmmmm!!!!

Oh Yeah. Did you know that the WIA was 85 years old this week? There is a note from Tim Mills later in this Broadcast. I wonder why this has gone un-noticed???

See you next week

WIA examinations

The next examinations conducted by NSW Division of the WIA will be held at Amateur Radio House Parramatta, 109 Wigram St., on Sunday 2nd April 1995 at 1.00 p.m.

Applications close : Thursday 23rd March

WICEN News

WICEN members may be interested to know that next weekend is the John Moyle Field Day, and the Hunter Region at least will be taking part; will any other Region be testing their communications skills?

On the same weekend is the annual Bungonia Cave Rescue, for which Mark VK2XGK is looking for volunteers who won't necessarily have to go underground, and Mark can be contacted at work on (02) 936-8689. Following this, Hunter are meeting on the 20th March, and the end of WICEN's financial year, at which renewals are due,is on 31st March.

Events in April include the VRA Mid-Year Conference at Wooli (between Coffs Harbour and Grafton) on the weekend of 1st-2nd April; the Forster Triathlon on 9th April, and is commanded by Michael VK2CMW and Darryl VK2DAZ; the Hunter Anzac March, commanded by John VK2JRC is on 23rd April; and the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388. Finally, don't forget that the increased Amateur fees are expected to come into force in April, so keep writing!

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural Report

With the weather kind to us this afternoon there was another attempt to install the 6m repeater antenna, and to straighten existing ones; listeners will recall that this had to be abandoned last month due to wind gusts. For safety reasons the Dural beacons were switched off at that time.

Also, if all goes according to plan there will be a test transmission on 10m FM, om 29.120 MHz; we at Dural intend to use as many bands on as many modes as we can, not only for the benefit of our listeners but also to occupy the frequencies and therefore

help keep the various intruders at bay. Thanks go to Peter VK2EMU for the transceiver that enabled this service.

More dontions have arrived at Dural; the latest acquisition is a manual and power supply for an AWA BS-50 low-band transceiver; thank you Jim VK2KQ. Should any listener have any equipment for which they have no further use then perhaps they could keep in mind the Dural station? Speaking of donations, if listeners want the 6m SSB service to return then a transceiver, crystal-locked with at least 10 watts output, will be required ...

Listeners will know that we are experiencing problems with the 160m transmitter tripping out occasionally, and RF feedback getting into the tape player as a result of the new battery-backup system; both these problems are being investigated.

Finally. listeners are reminded that the revised Australian Band Plan calls for a 20MHz split on 23 cm repeaters in line with international conventions, now that the CAA radars have vacated the band; other states have followed suit, and our own service on 1281.750 MHz must be considered. To avoid stepping on a WICEN frequency as a result of the new offset a revised frequency of 1273.500 MHz has been chosen, being the primary mobile channel; this corresponds to an input frequency of 1293.500 MHz. The paperwork for this change has already been submitted, and the repeater, being frequency-agile as the result of a generous donation from Chris Ayres of Dick Smith Electronics and many hours of work from Bob VK2YOD many years ago, will change one month after approval has been received back from the SMA.

-- Dave VK2KFU, Dural Engineer

News briefs

In a very short News Briefs this week, we note a short letter to the Sydney Morning Herald this week that made the following comment:

"Internet, Schminternet! It's just ham radio for the computer generation".

Perhaps listeners might like to write to the Herald and discuss the matter--it may be a good way to gain a little bit of publicity for Amateur Radio. Don't let those writing skills we've recently demonstrated to the politicians go to waste!

"News Briefs" looks at news items from the mainstream media that are of interest to radio enthusiasts. Thanks this week go to "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, please send a clipping to the Divisional office.

--Richard Murnane VK2SKY

A time of anniversaries

It is the 85th anniversaries in this past week of two Australian institutions.

On the 8th March 1910, the Mitchell Library was opened in Sydney. Formed around the Australiana collection of some 61,000 books, as well as thousands of pictures, manuscripts and maps from the library of Mr. D.S. Mitchell who had passed away in 1907, the collection has grown to become, it is considered, the world's greatest source of Australian documentary records.

Two days later in 1910 and a couple of city blocks south west of the Mitchell Library, a group of wireless experimental enthusiasts were meeting in the Hotel Asutralia, to form an organisation to fight the government of the day who were attempting to charge them a licence fee of several pounds, a high sum of money in those days, for the right to conduct Wireless experiments and the use of the airwaves.

The convenor of the meeting was Mr. Taylor and from those attending they formed an organization to oppose the government levy and obtain a fair hearing.

That organization, formed on the 10th March 1910, was to become the Wireless Institute of Australia, who, at this present time are again in consultation with the agencies of the government of the day on the matter of licence fees and the steep proposed increases in the annual levy.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Radio Science workshop

WORKSHOP ON APPLICATIONS OF RADIO SCIENCE

The Electronics Department of Macquarie University is planning a residential workshop on the applications of radio science, to be held in Canberra on the 25th to 27th July. To give you an idea of what to expect, here s an extract from the "call for papers" for the event:

"Radio science covers a huge range of technologies and industries - telecommunications, radar, imaging, biomedical applications, intelligent vehicle highway systems and radio astronomy to name just a few.

"Modern Australia is facing many challenges, with rapid development across many areas of technology. Australians have a long history of tackling and solving difficult problems, and radio science is one area in which we have excelled. One aspect of our historical strength in radio science has been the willingness and ability of workers in different fields to work together: to solve problems and create new technology by sharing ideas, methods and techniques.

"It is the aim of this workshop to provide a forum in which today's radio scientists can meet and draw on the community's combined knowledge to tackle the challenges before us. By bringing together people from various fields of radio science we hope to promote discussion, cross-pollination of ideas and a synergy that will drive us all to higher achievements."

The invited speakers and their topics are:

7 Dr Bob Frater, CSIRO - Keynote Address: "Radio Science - Is it relevant? A commentary on aspects of Radio Science in Australia"

7 Dr Mark Harwood, Optus - "Australian Satellite Communications - Offering New Service and Business Opportunities"

7 Dr Max Lay, VicRoads - "Intelligent Vehicle Highway Systems"

7 Dr Ken McCracken, Jellore Technologies - "Radio Propagation (1kHz-10GHz) Through the Earth in Mineral Exploration and Mining"

7 Dr Ray Norris, Australia Telescope National Facility - "Cross-fertilisation Between Pure and Applied Research: Can Industry Benefit from Australian Radio Astronomy?"

7 Dr Nick Stacy, Defence Science and Technology Organisation - "Synthetic Aperture Radar"

Anyone who would like to present a paper at the workshop should contact the organisers, with a 1-page abstract of their paper, by 3 April.

For more information about the Workshop, you can contact: Jodi Steel, WARS '95 Organising Committee, Electronics Department, Macquarie University NSW 2109.

Club news: Summerland

Summerland Amateur Radio Club

The thirtysixth Annual General Meeting of the Summerland Amateur Radio Club resulted in the following persons being elected to the various positions;

President .. VK2HE, Ken. Vice-President .. VK2CGY, John.
Secretary .. VK2TEK, Peter. Treasurer .. VK2JAY, Karlene.
Publicity Officer .. VK2GJ, Graeme
Committee Members .. VK2TMT, Mike and Bert Suesskow.

Information on club activities may be obtained from .. Ken, 244771, Peter, 224074, or Graeme, 851336.

The Clubrooms, at 412 Richmon Hill Road Goonellabah, are open on Thursday nights and Sunday afternoons.

The Club's postal address is .. P.O. Box 524, Lismore NSW 2480.

Club news: Central Coast

Central Coast Amateur Radio Club

The Central Coast Amateur Radio Club advises that their next meeting will be this Friday, at the Club rooms, Dandaloo Street, Kariong, starting at 8pm.

There will be a lecture on the Global Positioning System (GPS).

Submitted by Bob VK2XRF

Club news: Waverley

Waverley Amateur Radio Society

The Waverley Amateur Radio Society is celebrating this year the completion of 75 years as a radio club.

The club meets regularly in their club rooms and conducts training courses in telecommunications for amateurs. The club will be having a presentation made by Mr. Michael Stubbs-Race (VK2ASR) on Satellite Remote Imaging using the QFAX IBMPC Program. He will show how easy it is to receive satellite images using a receiver and display the images using a computer. Advice will be given on how to build your own equipment or how to obtain commercial equipment for those who don't have the expertise. Remote imaging is proving very popular for those who want to be involved with satellites and earth resources monitoring including the weather.

The meeting will be held at 7:30 p, on Wednesday the 15/3/95 at the Club Premises, Vickery Avenue, Rose Bay (the Scout Hall opposite the Woollahra Sailing Club).

Simon Buxton - VK2EII - Publicity Officer

Club news: Manly-Warringah

The next meeting of the MANLY-WARRINGAH RADIO SOCIETY this coming Wednesday will feature a visit to the ATV studios of the Gladesville Amateur Radio Club. Due to space restrictions, numbers are limited for this visit, but there are still places available. Please note that the visit will start at about 7:30pm at the Gladesville club premises.

Members wishing to take part in the visit should contact the Manly-Warringah publicity officer, Richard VK2SKY, at work on 807-0656, before Wednesday.

--Richard VK2SKY

Club news: Radio Veterans

Radio Veterans meeting

Frank VK2DYP advises that the Radio Veterans meeting is at Parramatta on Thursday, starting at 11am.

Coming events

COMING EVENTS

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Shortwave Listeners...

Proposed new Amateur licence fees were due to come into effect on the first of March, but this has been delayed until late April -- so please

keep writing!

Liverpool and Districts ARC meeting . . . . . Tuesday
Waverley ARC meeting . . . . . Wednesday
Manly-Warringah Radio Society visit to Gladesville ARC . . . . Wednesday
Divisional Council meeting . . . . . Friday
Bungonia Cave Rescue exercise (WICEN--Mark VK2XGK) . . . . . Sat-Sunday
John Moyle Field Day . . . . . Saturday-Sunday
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 20 March
Waverly ARC Amateur classes begin . . . . . 21 March
Divisional examinations, applications close . . . . . 23 March
Divisional Trash and Treasure Sale . . . . . 26 March

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, by fax on (02) 626-6066, or on packet to VK2SKY @ VK2AAB.

Items can also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

3218. Radio Shack $12 DVR IC for HF xcvrs ??

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 09:28:50 UTC
From: RHAREL@18.9.INTel.COM
Message-ID: <9503130928.utk23558@18.9.intel.com>
Source record: 250812

$30 Digital Voice Recorder for Yaesu HF xcvrs ?

DVR's are great for contests, calling CQ, ID'ers and a whole
bunch of other applications where you would rather push a button
than speak into the microphone.
Radio Shack is selling it's Voice Record/Playback IC (ISD1000A)
for about 12 dollars these days.
I figure it's possible to take one or two of these chips
and homebrew my own DVR and save about $200 while I'm at it.
This 28 pin IC will allow you to record and play back 20 seconds
of high quality audio.
I bought 2 of these IC's with the intention to make my own
DVR (Digital Voice Recorder) for my Yaesu FT-990 since
the Yaesu unit costs about $230 dollars and can only do
16 seconds.
I intend to use the second IC for a continuous 20 second looped
recorder to catch things I may have missed.
I'm not quite sure how to hook up the IC once I construct the
basic working circuit to the 7 pin DIN connector on the back
of the FT-990.
If there is anyone out there who has done something like this
for any of the newer Yaesu xcvrs that use the external DVR,
I'd appreciate some coaching on this.
I understand that I'll have to use a small 7805 regulator
if I plan to use the 9V coming out of the '990 since the
Radio Shach IC works on 5 Volts
Here is the pin-out for the 7 pin DIN on the '990:

1- VOICE IN
2- VOICE OUT
3- PTT
4-+9V
5- CONTROL 1 (I'm not sure how this works)
6- CONTROL 2 (" " " " ")
7- GROUND

And here are the important pins to the Radio Shack IC:

VCC (+5V)
ANALOG GROUND
DIGITAL GROUND
SPEAKER +
SPEAKER - (THE IC'S OUTPUT IS 16 OHMS)
MIC REF
MIC

AGC
CE (NORMALLY PULLED HIGH. TO GROUND TO BEGIN RECORD)
PD (" " . TO GROUND TO BEGIN PLAYBACK)
R-R (PLAY RECORD SWITCH)

Can anyone on the net help me construct this DVR for the Yaesu
FT-990 (will work with other Yaesu xcvrs) ?

Any feed back is appreciated. (
Thanks and 73,
Rich
WB2JBS

Dave,

As you mentioned it, you need the PC too. The best program to get
is JVFAX, ver 7 (?). The program is well documented, and tells you
about the modes et.c.

Good Luck, Moritz DL5UH

3220. Multi-way Rotary Coax Relays

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 11:53:55 UTC
From: tgold@microvst.demon.co.uk
Message-ID: <951331@microvst.demon.co.uk>
Source record: 250816
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,sci.electronics

I have often seen rotary motorised coax relays at swap meets and hamfests and have wondered whether they were useful. They always come "as is" with no data, although the label usually warns about 24 or so volts requirements.

Well, yesterday I succumbed to a very clean four-way relay labelled Radiall Type R582964 (and says 24Volts). If anyone has a Radiall data sheet, catalog description or a fax number for them, it would help. I believe that this was a French company that was then acquired by Transradio, a U.S. firm.

Has anyone managed to get any use out of such units?

This seems like the ideal way to get multi-band performance out of LDF5-50 or such without the cost and weight of mutiple runs.

Any help greatfully received.

>Not a one-way transmission. Two licensed ham stations are involved - the
>transmitter, the aircraft that ID's with your call, and the receiver, you on
>the ground. The intended receiver of the signal is a ham station, not the
>general public.

I'm unfamilar with the laws govening this poster, so I'm brining up this question:

Craft has call of ham, transmitting.
Ham is on the ground, receiving.

Thus, up to a certain extent, the station is 'working himself', is this allowed?

Because over here, we aren't allowed to 'work ourself' (eg: 9V1ZY to 9V1ZY...)

Curious mind would like to know... *ponder*

If you are ever in the Colorado Springs/ Denver area,
Check for local RailHAMS hanging out on 146.460 and on
wide area coverage repeater 146.970- (mostly on weekends).
In the near future, we will be testing a 9:00 AM Saturday
net on the 145.265- repeater in C.Springs. Topic of discussion?
Trains, railroading, train-chasing, history, etc.

We will also use (along with the 146.460) the 146.820- or
the 147.015+ repeaters while chasing UP3985, UP844, or
UP E-Units in the Laramie/ Cheyenne Wyoming area.

Remember, most of you non-ham railfans have scanners, so
listen in. We will move alot of information.

This Sunday, 3/19/95, The Ham Radio & More Show will feature a
discussion on batteries, battery chargers, and what's on the horizon
with regards to portable power. One of the larger manufacturers of
batteries will be the guest. He'll explore the often debated question of:
Do NiCads really have a memory and more?
That's Ham Radio & More at 6:00pm EST on more than 30 stations as
well as on 3 different satellites in 3 different modes. For TVRO, it's on
Spacenet 3, transponder 9, 6.8 audio. The toll free call-in number is
1-800-298-talk. More info about the show can be had at 602-241-1510.

Hi all,

Could somebody please let me know the bandplans for 6m, 2m and 70cm in the Atlanta Ga area? The 1995 ARRL handbook seems a little vague on VHF/UHF bandplands. Also, are there voice repeater and packet BBS lists available for that area, and if so, from where could I get a copy?

Finally, are there any laws relating to importing radio equipment? I'm planning to import my Yaesu FT-5200, Alinco DRM06, Kenwood TS780 and possibly a Kenwood TS820S. Hopefully by the time this happens I'll have sorted out the appropriate USA licence :-)

3228. Re: Out-of-band emergency calls

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 15:08:04 UTC
From: suggs@tcville.es.hac.com
Message-ID: <3k1n4k$ije@hacgate2.hac.com>
Source record: 250825

In article 794595698snz@microvst.demon.co.uk, tgold@microvst.demon.co.uk ("Anthony R. Gold") writes:
|In article <3jhqse$s8r@hacgate2.hac.com>
| suggs@tcville.es.hac.com "Brian Suggs" writes:
|
|> Actually, it says "No provision of these rules..." It does not specify
|> whether "these rules" means part 97, or all of Title 47 of the CFR, or
|> only the subparagraphs of 97.405.
|
|Nice try but if you read it from end to end, the term "these rules" is
|applied with consistancy to the rules of Part 97. Elsewhere in Part 97,
|reference is also often made to "FCC Rules" and rarely to "FAA Rules".
|
|The key to being a good jailhouse lawyer is first to study the text.
|
|The term "these Rules" is used in connection with transmission for hire,
|protection of life and property and distress signals, amongst others.
|
|Perhaps you might find the most convincing us of the term in:
|
| 97.521 VEC qualifications. - No organization may serve as a VEC
| unless it has entered into a written agreement with the FCC. The VEC must
| abide by the terms of the agreement. In order to be eligible to be a VEC,
| the entity must:
|
| (d) Agree to assure that, for any examination, every
| examinee qualified under these rules is registered without regard to race,
| sex, religion, national origin or membership (or lack thereof) in any
| amateur service organization;
|
|If you feel that VECs examine rules less broad or more broad than all
|sections of Part 97 and only Part 97, please tell us more.

Actually, I would consider 97.521 the only occurence of the phrase "these rules" which could be used to argue it means only part 97. One occurrence does not equal "applied with consistancy". Further, even this occurrance doesn't convince me. Paragraph (d) says that the VEC will assure that the examinee who is qualified is registered without regard to x, y, z... Not that the VEC is assuring he is qualified under these rules. I don't think any of the VE's at sessions I have attended have made any attempts to verify that examinees were not representatives of foreign governments.

I'll be the first one to admit that this is just one interpretation. All I ask is that others, who are so adamant in their position of what the regulations mean, make the same admission.

Also, this whole line of discussion was secondary to the issue that nothing in part 97 prohibits anyone from modifying, building, or owning radios that can transmit "out of band", except for the 11 meter power amplifier restrictions.

Oh, and be assured that I *have* studied the text. :)

-Brian AC6GV, ARRL and GLAARG accredited VE

|>>>Of course you know that the rules also say that no provision of part
|>>>97 prevents the use of any means needed to get help in an emergency.
|>>>(97.405)
|>
|>Actually, it says "No provision of these rules..." It does not specify
|>whether "these rules" means part 97, or all of Title 47 of the CFR, or
|>only the subparagraphs of 97.405.
|
|You are correct. However, provisions generally applicable to all of
|CFR47 appear in Part 2. Wording similar to 97.405 is found in some,
|but not all, other parts of CFR47. My interpretation of the intent
|of that expression is to apply only to the particular part in which
|it is found since that is the pattern of intent found in other places
|in CFR47 where such expressions are used.
|

Fair enough. I'm not saying my interpretation is the only one, only
that it is a logically valid one. I would guess that the main source
of trouble for someone involved in such a situation wouldn't come from
FCC rules at all anyway, but rather from state or local laws concerning
interfering with police business, or something similar.

Hi:
I agree with D15UH. Unless you anticipate extended trips and can tolerate long periods off the air while your solar panel recharges your batteries or can afford to purchase and carry a huge panel, you are better off just bringing a dense power supply. To this I'd like to add: Lithiums weigh about 2/3 the weight of an alkaline for a given volume and have as much as 7 times the amp-hours depending on the load they must deliver a current to. See my other post in this newsgroup titled *Use Lithiums in you HT!!*. I posted it a couple of days ago, so you should be able to find it. Lithiums are AWESOME for mountaineering because of their tolerance for cold temperatures and AWESOME for radio because the more Amps you pull, the longer they last relative to alkalines under the same load! Be mindful of their 1.5 Amp ceiling though. If you have an application that calls for 12Volts at 6 Amps, for example, you cannot just string 4 3-Volt lithiums together in series. These four lithiums will NOT deliver 6 Amps. You would have to cross-link an additional 3 sets of 4 3-Volt lithiums in parallel to get the 6 Amps current capacity. NiCads can deliver 2 Amps per 1.2 volt cell. Alkalines are similar to lithiums in this regard, but unlike lithiums, not only do they last as long with heavy current drains, they do not deliver as constant a voltage over their life as lithiums do. Actually, the steady delivery of a rated voltage to about 90% of capacity is what NiCad's do best.

One more suggestion. I have done a lot of backpacking in the Sierra's of California. If I had to have only one radio with me for emergency purposes (if not just for fun) it would be the lightest, smallest 40-Meter CW QRP rig I could find (take your pick of several out there) used with a horizontal wire dipole at low elevation. This is ordinarily not a good idea to have a dipole close to the ground, obviously, but for emergencies, the high radiation angles that result from having the dipole far less than 3/4 wavelength above the ground, will give you terrific short-skip coverage in a 50-400 mile radius! If I were in a mountain canyon, gorge, or valley, I would much rather have this rig than a 200-Watt VHF radio and some lithiums to power it would be infinitely more useful than a VHF HT! If CW isn't appealing, consider MFJ's 10-Watt SSB QRP 20-Meter radio with a wire dipole. In either case, take Lithiums. They are usually available only in multiples of 3 Volts, but Eveready now makes a 1.5 V AA size (actually 1.7 V when new.) See my other post.

Addendum to my original post:

Be mindful of lithium cell's 1.5 Amp ceiling. If you have an application
that calls for 12Volts at 6 Amps, for example, you cannot just string
four 3v lithiums together in series. These four lithiums will NOT
deliver 6 Amps. You would have to cross-link an additional three sets of
foru 3v lithiums in parallel to get the 6 Amp current capacity.
Nicad's can deliver 2 Amps per 1.2 volt cell.
Alkalines are similar to lithiums in this regard, but unlike lithiums,
not only do they not last as long with heavy current drains, they
do not deliver as constant a voltage over their life as lithiums do.
Actually, the steady delivery of a rated voltage to about 90% of
capacity is what NiCad's do best.

Howdy:

Ok you boatanchors fans, I need help. I'm trying out a Coner (sp?) or
Conair (sp) CW transmitter. It is crystal controlled and spouts at least
75 Watts. The price is right, 15 bucks, and I can use it for experimentation

However, does anybody know where I could find crystals for that beast or
is there a way I can just plug a box to be able to transmit in a whole band?

Regards,

NE>Gary

Just in case the minimum is fine with you...maybe you just want CYA
coverage with your landlord? Ground rods for semi-temporary living
quarters are VERY easy. Go out and buy some 1/2 inch copper PIPE.
Preferably in 10 ft. lengths. Slip your garden hose over the end of the
PIPE and tighten down with a small size hose clamp. There should be no
reason to modify the hose for this. Hook up the hose to a water faucet
and turn the water on. What you have now is a hydrolic drill that is 10
ft. long. Simply push the rod into the ground, no hammering no sweat,
just some mud...it is up to you to decide how many of these you want and
how far to space them apart from each other. I know there will be purist
out there who will demand a SOLID rod be driven into the ground. But
lets face facts, you ground your tower, (or chimney mount) you put
polyphasers in-line with your coax, and you still don't really know if
you will get nuked by mother nature.

In the end, probably nothing will save your equipment...sleep well!

If I wanted to send Jonathan my copy of Windows 3.1 that I no longer
use, and delete it off my system. (which I have already done as I run
3.11 WFW) then I don't see how I am breaking any laws. I am simply
giving him my old unused copy of that program. I have removed it from my
system so it will not be installed on two systems at once. Where is the
legal problem?? And where do you get off saying Hams are the worst
violators of copyright laws? Sounds like a grave generalization to me.
Obviously you don't know any of the Hams I know...

-Bob

Go away, or I shall have to taunt you a second time.

: : >product code for these.)

: : Can anyone explain how they create a 1.5v lith. cell?
: : I thought they were inherently 3.0v cells.

: I have not been able to figure that out either. I don't get it.
: I got the spec sheet from an Eveready rep at COMDEX in Las Vegas. I
: asked him and he chuckled something about how that's proprietary and they
: are the only ones who have it. By the way, I've noticed they are really
: about 1.7V when new.

: AB6SL

Arrrgh! I hate it when people claim things are proprietary and
they are not. The following is all out in the literature:

The Eveready L91 batteries use the Lithium
Iron-Disulfide (FeS2) chemistry. People associate lithium
with 3 volts since that is what Li MnO2 and LiCFx batteries
produce. The cell voltage is strictly a function of the electro-
chemical potential of the two half cells in the cell. Lithium
has a very high positive half-cell potential, so it is possible
to get 3 volts per cell if one uses a reasonably negative
half-cell for the cathode. The choice of FeS2 was made
so that the cell voltage was near 1.5 volts for compatibility
reasons.

These cells as pointed out have excellent low-temperature and high-
current performance. This is due to their internal
construction in addition to chemistry. These cells have a spiral
bobbin construction (like NiCds) rather than a can and plug
construction of alkaline cells. While more expensive, the
exposed surface area of the active materials is much greater
allowing for the higher currents. The electrolyte is a solution
of lithium trifluoromethane sulfonate in dimethoxyethane and
propylene carbonate, which
being non-aqueous (think about Li + H20) performs better

in sub-freezing temperatures.

The open circuit voltage of these cells can be as high as 3.65 volts
although this rapidly drops on load. This is due to the presence
of trace impurities in the FeS2 such as Ni, Cr, and Co.
Unlike NiCds, and like alkalines,
the discharge voltage is a function of percentage of charge remaining,
so the OCV can be a useful indicator of life remaining. This
is due to a multi-step discharge chemistry associated with
the FeS2 cathode.

Due to the low internal resistance of the spiral bobbin construction,
the short circuit current of the cell is well in excess of 10A.
As this degree of current would cause the cell to heat up and
eventually burst, releasing hot organic electrolyte and
metallic lithium, for safety, a Raychem resettable fuse is
integrated into the cell and limits the dischrage current
to 2.1A.

Incidentally, this chemistry was also used by Venture
Technologies in the early 80s for AAA cells for pagers.
Of course, since pagers were low-current, they used the plug
and can construction and capitalized on the low weight of
lithium. However, the cost differential didn't pay off and
those cells are no longer being made.

I personally keep a set of lithium cells in my emergency
kit as they have excellent shelf life (due to passivation of
the Li anode) and their excellent overall performance.

Cheers -

Ken

* H-II LAUNCH SCHEDULE *
========================
February 24, 1995
NASDA HQ, Tokyo

The H-II Launch Vehicle with the Space Flyer Unit (SFU) and Geostationary Meteorological Satellite-5 (GMS-5) aboard is newly scheduled to be launched as follows:

1. Primary Launch Date: March 15, 1995
2. Launch Window: 16:45 - 18:10 (JST=UTC+9h)
3. Alternative Launch Period: March 16 to 31, 1995

Regarding the malfunction having been detected in SFU, it has been recovered to the normal condition and confirmed there is no concerns with the launch. The relating organizations have agreed to settle the above new launch schedule.

* LOGGING OUT OF MIR *
==========
More and more people are trying to use the MIR PMS these days, and that is fine if we all follow some simple rules.

How many times have you seen a whole MIR pass full of <<DM>> messages (DM-Disconnect mode) and no data, and it appears that know one is logged in? Well, in reality, someone is logged in, but may have gone out of range of MIR and is unable to logout of the MIR PMS. This results in the PMS that is tied up until the PMS idle timer expires and forces a disconnect to the out-of-range station. After 8-10 minutes, MIR will try to force out the missing station with ten (10) <<D>> (D-Disconnect request) packets. After the last <<D>> packet, MIR will accept the next connect request heard.

Rule: If you are connected to the MIR PMS, make sure you send the LOGOUT command (B) to MIR 2-minutes before LOS or when Mir gets below 10 degrees above the horizon. This will help prevent ruining a whole pass for the stations down range of your QTH.

Remember, only 1 station can connect to MIR's PMS at a time, ALL others must wait.

[Info via G. Miles Mann, mann@pictel.com, WF1F @ K1UGM.MA]

* SpaceNews NEWS *
==========
Maurizio Bertolino has announced that he is translating issues of SpaceNews into the Italian language and making them available free of charge on his Trance BBS in Italy. The number for the BBS is +39-11-482751.

This raises the number of languages SpaceNews is available in to five (English, French, Portugese, Spanish, and Italian). Thanks to all those who take the time to do the translations every week.

* SpaceNews AVAILABILITY *
==========
SpaceNews is a non-commercial electronic journal of interest to Amateur Radio Operators involved in satellite and other advanced areas of telecommunications. It is published every week (as time permits) and is available for unlimited circulation provided no charges are made and no profits are realized from its availability.

SpaceNews is available from a variety of different electronic sources. It is widely distributed on the Amateur Packet Radio (AMPR) network

through a system of thousands of terrestrial packet bulletin board systems around the world, and follows normal AMSAT message routing. It is also uploaded weekly to the AMSAT-OSCAR-16 digital store-and-forward "Pacsat" satellite.

SpaceNews is carried on the Usenet news service under the newsgroups of rec.radio.info, rec.radio.amateur.space, sci.space.news.

Those with Internet access can obtain the latest issue of SpaceNews by using the Unix "finger" command as follows:

finger magliaco@pilot.njin.net

Those with e-mail capabilities can receive SpaceNews by sending a blank message to infobot@infomania.com with a subject of:

#FINGER magliaco@pilot.njin.net

Archives of past SpaceNews issues are available via anonymous FTP at pilot.njin.net (IP address = 128.6.7.38). Files are located under the /pub/SpaceNews directory. Issues from 1993 and 1994 have been compressed in .ZIP files, while issues from 1995 are available individually in ASCII text form.

Many of the files available via FTP at pilot.njin.net are also available at trustno1.pc.cc.cmu.edu [128.2.41.51]. This system is a 486DX2-66 MHz PC running Linux, and can accept 100 simultaneous FTP sessions. It also carries a great deal of information relating to the television program "The X-Files".

: BY the way folks: Is anyone else having difficulty with the
: 4 Call area (two letter) incoming QSL Bureau ??????
: (Sterling Park Amateur Radio CLub, VA)

: I sent them 2 or 3 envelopes about a year ago, and I have heard
: NOTHING back from them!!

Maybe you just don't have any cards coming to you. :-) :-) :-)

I sent them some envelopes over a year also. About a month ago I finally received two envelopes back. One had like 5 cards in it, the other had 2 cards (two different callsigns). I had sent more than 300 cards via the outgoing bureau prior to sending my envelopes to the incoming bureau.

: Today I mailed them two more large envelopes, an additional
: SASE for a reply, and a letter asking them what is going on!

Don't be surprised if you don't hear from them for quite a few weeks. The letter I got with my last few cards indicated that the bureau is actually divided amongst several volunteers and that it may take several weeks for information to filter down to the person actually handling your cards.

I have decided to additionally persue other means (direct etc.) of geting a QSL card confirmation.

3247. Re: Question about the 5WPM code test

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 22:35:44 UTC
From: dave@fc.hp.com
Message-ID: <3k2hc0$goa@tadpole.fc.hp.com>
Source record: 250845

Here are a few more tidbits for you:

The test QSOs will contain every one of the letters, numbers, punctuation marks, and prosigns at least once. As has been mentioned, you can pass the test either by getting at least 7 of the 10 questions right, or by having one minute of solid copy (25 consecutive characters at 5 wpm, 65 characters at 13 wpm, 100 characters at 20 wpm). Numbers, punctuation marks and prosigns do count double. Remember, any wrong or missing character resets the counter.

The twist that hasn't been mentioned yet is that you can get credit for a lower speed on a higher speed test if you have enough solid copy. For example, if you take the 13 wpm test, and have 25 consecutive characters of solid copy, you get credit for 5 wpm. Likewise, 65 characters on a 20 wpm test gets you a 13 wpm pass. That's one good reason to try a higher speed exam as a warm up. The other reason: in our session this last weekend, we convinced a candidate who came in to take 13 wpm to try the 20, and he passed it!

Here's a hint for taking your test: whenever you hear a punctuation mark, drop down and start a new line on your copy sheet. If you're copying well, it doesn't hurt, and if you're having trouble it can help you re-synchronize.

Good luck,

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 MARCH AND FORECAST FOR 14 MARCH - 16 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 12 Mar
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Mar 15 Mar 16 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Mar: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: minor storm

Estimated Indices : A K Observed A Index 12 Mar
Learmonth 27 4335 5532
Fredericksburg 25 26
Planetary 30 28

Observed Kp for 12 Mar: 5543 3334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Mar 15 Unsettled
15 Mar 8 Quiet to unsettled
16 Mar 8 Quiet to unsettled
COMMENT: Active conditions may occur during local night.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

13 Mar normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Mar normal normal fair
15 Mar normal normal normal-fair
16 Mar normal normal normal-fair
Degraded HF comms are expected for high latitude circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
13 Mar 49 15-20% enhanced, Townsvile was 15-30% above predicted
monthly values, Hobart was 15-30% enhanced during day with strong
sporadic E 4-6UT, then near predicted to 15% below with spread F at
night.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
14 Mar 50 About 15% above predicted monthly values. mufs at
hobart are expected to be near predicted to 10% depressed.
15 Mar 45 About 10% above predicted monthly values
16 Mar 40 About 10% above predicted monthly values
COMMENT: HF conditions are expected to be degraded for high latitude
circuits, enhanced conditions are expected for low latitude circuits.

3250. Re: FT-530 RX 800 MHz?? can the FT-51R do that?????

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-13 23:56:14 UTC
From: lgregory@cris.com
Message-ID: <3k2m2u$adi@warp.cris.com>
Source record: 250846

In article <3jq5pp$ba3@ecom4.ecn.bgu.edu>, mudaw@uxa.ecn.bgu.edu (David A. Webb) says:
>
>I have read where the FT-530 has the capability to RX 800 MHz.
>Is this true?
>Not that it applies to me, because I have a FT-51R.
>But I wonder if the 51R can be modified the same way.
>

I don't know about the FT-51R, but yes, the FT-530 can be modified to
receive 800-9?? MHz in fixed 12.5 kHz steps. It isn't very good at it,
but it's better than nothing.

I just wanted to stop in here to say two things:

1. Thanks very much to all who responded to my "CW and Web Site ?'s" post a few weeks back with advice about taking my 13 wpm code test. Using some of the advice I got, I took my Element 1B last Saturday (3/10) and (barely :>) passed it to complete the requirements for my Advanced license. So in a few weeks, I'll become KS4??, or "The Artist Formerly Known as KD4QDP". :)

2. I got a chance to help my club, the Lynchburg (VA) Amateur Radio Club, with a SAREX contact on Sunday (3/11). The students at J.J. Fray Elementary in Rustburg, VA had a nine-minute Q&A session with one of the astronauts onboard the shuttle _Endeavour_, courtesy of a phone bridge and an Australian ham who got us a wonderful signal for the whole session. I tell ya, if seeing children's eyes light up when they hear a real live astronaut talking *right to them* doesn't make you feel glad you got your ticket...you're clinically dead.

: Help please! I am located in Central michigan <at CMU> and I have been
: trying to receive NAVTEX bulletins and I have been unsuccessful. I have
: two sources that conflict each other with frequencies bu both agree on LSB.
: Can anyone offer a "for sure" frequency and time? Or any other help?

518 KHz is the nominal frequency. LSB is correct for decoders
set normally. The transmissions are about every 20 minutes, and
should be receivable in Central Michigan during nighttime hours.
They are not continuous, and from all over the country and in fact
world, so you may have to listen an hour or two before you get
good copy. Remember that the decoder, whatever you have, runs
on two audio frequencies about 200 Hz apart. Many accept 2025 and
2225 Hz or thereabouts, so a digital receiver will read 518+2=520
lHz, but yours may be different. GL and 73 Gerry K8EF@W8CQK.OH.USA.NA

I'm still looking for a braille edition of Playboy -- I understand the
centerfold is OUTRAGEOUS.

My apologies for complete insensitivity and political incorrectness,
but it HAD to be said.

For those among you you appreciate the male of the species, please
substitute 'Playgirl' for 'Playboy' and political correctness and the
balance of the cosmos returns.

I have a TS-440, and have had QRP rigs with full break-in, and a TS-520 without full break-in.

I prefer full break-in to hear the "other end" if they want to ask a question. As others have pointed out, you hear a lot of other junk in the interim, but you can learn to ignore it.

If CW is not yet comfortable, semi-break-in is a nice way to get accustomed to the noise between pauses, then graduate to full later.

Even today, I sometimes go to semi-break-in if the band is exceptionally noisy. Find I concentrate better that way.

Good Luck!

: Is this true?
: Not that it applies to me, because I have a FT-51R.
: But I wonder if the 51R can be modified the same way.

The FT530 can indeed receive 800 MHz, and does a pretty good job of it. However, as far as I can tell, the FT51R cannot receive 800 MHz. I have yet to see a post concerning modification of this radio to receive 800 MHz, plus, the Yeasu rep (fwiw) told me that it cannot be done.

: : 2M (146Mhz) repeater system.

Well, the Diamond and Comet Repeater antennas work well, but they seem to be very prone to getting blown apart during lightning storms. If you live in an area where you don't get much lightning, then they would be a good low cost choice.

The BEST repeater antenna, is, of course, a Decibel Products (DB220 I think is the model for 2 meters, DB420 for 440 MHz). These are often found used at ham fests, and can go for as little as $150. Be careful, however, since the wiring harness on these antennas is the first thing to go if it gets zapped by lightning. A new harness from DB products can run about $300, but if you know what you're doing, you can repair a bad harness.

It's interesting to note that while the gain figures on the Diamond and Comet antennas are as good as those on the Decibel Products, many field tests have proven that, hands down, the DB Products antenna is simply the best.

GC>The *minimum* you can do according to the NEC is use a #8 or larger
GC>wire, run *directly* from the mast to ground with no sharp bends. The
GC>ground should be, *at minimum*, an eight foot driven rod. Now if you
GC>want *real* strike protection, you're going to have to do more, as I've
GC>outlined in several postings, but this is the minimum that Code will
GC>allow. It will offer fairly good protection to the *dwelling*, but
GC>probably won't save your equipment.

Gary.
I have been thinking a lot about "the minimum" requirements of NEC now that my back yard is beginning to look like a copper spider webb. I recently got a copy of the Antenna Book and in the front of the book it describes a ground system that utilizes a copper wire or pipe burried around the house a few inches under ground. Would you consider this good protection?.
Also, It is usually easy to properly ground a vertical antenna at the mast but a dipole that is supposed to have a transient protection device between the antenna and transmision line sometimes is almost an imposibility to attain ie. Just recently my son and I put a dipole up 70 feet in the trees behind my house (not really in the trees but using the trees). The possibility of the top of these trees holding 70 feet of #8 or larger is slim to none not to speak of the cost for a tight budget. Any suggestions? I would appreciate any comments from anyone.

Thanks. 73's from KC4QBQ Mechanicsville, VA

The reason most newcomers don't know anything is that you don't have to know anything to get a license. You just have to memorize the answers. IMHO, making the question pools available is a cheat. Back when I got my license in 1978, you had to go to the FCC field office and face the man with the white shirt and black tie proclaiming "So, you want to be a ham radio operator, I don't think so!" You had to LEARN it to pass the test. 73, Dana, AJ1R.

Sounds like a "CONAR" kit, popular transmitter and receiver kit of the
1960's. Looks like a lunch box. I don't believe it put out anywhere
near 75 watts, I think it had 40 watts input or something, probably
30 out? Not sure about that.

>However, does anybody know where I could find crystals for that beast or
>is there a way I can just plug a box to be able to transmit in a whole band?

Crystals still available, FT 243 case, from several manufacturers, many
list in QST and CQ and 73 magazine, I don't have an address here. You
can try a vfo, but you need an old one like a Heath VF-1 to drive it
properly, and might need to do a little mod to make it work.

Good luck. Look for a manual!!!

In many cases, the rig isn't fast enough to do full breakin at
high code speeds. Either the receiver will be muted half the time
during key up or the weighting of the transmitted code will be
light or a combination of both. In that case, you are pretty
much forced to go back to semibreakin or QRS. Case in point,
my FT-757. Abominable design makes it useless on full breakin
at any decent speed.

>for the help.

Steve,

The size of panel and battery depends on the amount of transmitting
you have in mind. As a guideline, two 50 W panels will harvest about
200 Whours a day in mixed weather, and about twice as much in full
sun shine. This will give you about 1.5h transmit time...

As to the charging circuit, what you *need* is an overcharge protection.

May be you can get in touch with

The Best of 75 Net is a net that meets on 75 meters every SUNDAY Night at 7:30 PM Eastern on 3.975 mhz.

The purpose of the net is to inform and entertain. Each week we have a special guest on the net to speak directly to the amateurs on the frequency. This is a wonderful opportunity to speak personally with these great and knowlegeable individuals in these various fields.

Every so often the Best of 75 Net, has "OPEN LINE". This is again an opportunity for you the amateur radio operator or Short Wave Listener to ask questions or express your view on the net.

Prior guests have included ; WD9HSE Bob Nelson , W5YI Fred Maia, KC9RP Hap Holly, W2NSD Wayne Green and WA6ITF Bill Pasternak

Last week's guest Bill Pasternak went for 2 1/2 hours until the net had to be closed. It was a great success and all involved had a great time. Topics ranged from amateur radio to missing persons.

- -

T H I S W E E K : 3/19/95

I don't think the airwaves are for the exclusive use of those who
can properly explain electromagnetic propagation, or know the
pin-out for an RS-232 interface, etc... If someone can have a good
time using VHF/UHF without _interfering_ with another station, I
think it's just wonderful, as long as we keep the lids off of HF.

Don't ask me about my credentials... I'll give you a hint. I got my
current callsign 10 years after being licensed the first time. I
was then a graduate student in EE.

There you go again :-)

Nothing says that the VE assures anyone that the examinee is qualified. It simply says that the VE will assure that qualified examinees are registered. If the VE had another duty which was to prevent registration of the non-qualified, you would indeed have a point. The absence of a declaration with regard to being a diplomat or a spy if a defect in Form 610 and not an ambiguity in the rules. If you simply register everyone for whom you have no knowledge that they are unqualified, you will have complied with this sub-section.

> Oh, and be assured that I *have* studied the text. :)
>
> -Brian AC6GV, ARRL and GLAARG accredited VE

I appologise for appearing to imply otherwise.

The C connector is bigger than an N, the HN is bigger still, none of
the three will interconnect. The BNC will interconnect, but not lock,
with the N. The voltage and power limits are generally set by the
flexible cable that they are mounted to rather than the connectors
themselves. All four are rated higher than RG8 type cables.

This is getting silly.

There is no one best antenna for a repeater, just like there is no one
best antenna for HF. There are a lot of factors to weigh, including
environment, HAAT, shape of coverage area desired, terrain, maximum
power input, frequency, etc. Every repeater antenna made has its
advantages and disadvantages. A 10 dB SuperStationmaster might
be a great antenna on top of a building a few hundred feet above
surrounding terrain but may be a terrible antenna, both as far
as signal saturation as well as mechanical durability on a
10,000 foot mountaintop.

3282. IOTA to NA-055 thjis weekend

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-14 15:15:48 UTC
From: brunelli_pc@delphi.com
Message-ID: <h62a2qs.brunelli_pc@delphi.com>
Source record: 250878

IOTA OPERATION - March 18-19

N1QDQ/N1QVE will be operating a mobile HF IOTA station from
NA-055. This is coastal Maine east of 69 deg W. Operations
will be centered around 3.020, 7.020, 14.020, and 21.020 on CW
and 3.860, 7.260, 14.260, 21.260, 28.460, and 28.560 on phone.
We will QSY to a WARC band if necessary, but will be working only
bands showing good propagation due to the limited nature of the
operation.

The bands have been in very bad shape lately and the prospects
are not looking especially good for the higher frequency bands,
but we will be there.

QSL direct to N1QDQ or N1QVE via callbook or buro. We hope to
have a special IOTA QSL card quickly in order to return cards ASAP.

Though this may not be the rarest of IOTA groups, but any excuse
for a road-trip is acceptable!

3283. Re: Mods for Alinco DRM06?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-14 15:24:49 UTC
From: Mike@g4kfk.demon.co.uk
Message-ID: <795194689snz@g4kfk.demon.co.uk>
Source record: 250883

Hi William,

> Anyone have any information on the new Alinco DRM06 6 meter radio.

I have one of those here. The bands a bit quiet over here, and as you
might have seen in uk.radio.amateur there is a very heated debate over
the proposed repeater network on 51 MHz.

> According to a very informed source there is a mod, but this person would
> not tell me what it is. I would like to know the frequency range transmit
> and receive. To any Net Police out there warming up your flamers. I might
> need a signal genarator and want the radio to do double duty. E-mail me if
> you like.

Simple trick to extend receive range to 40.00 - 59.99 MHz:

1/ Power the radio off
2/ Power on whilst holding in the CALL / CH. SP. button

That's it! To go back to 50.00 - 53.99 just repeat the above steps.
I have done this to my DRM06 and can confirm it works.

There's a hardware mod for extended transmit/receive. I have NOT done this,
but have been assured by the Technical Editor of a respected UK ham radio
magazine that it's ok. The coverage will become 40.000 to 72+ MHz, though
I understand that the power falls off at the top end, and the receiver
performance is lousy on the (UK only) 70.000 to 70.500 (4m) ham band:

1/ Remove the front panel (I know that's easier said than done. That's why
I haven't tried it yet!)
2/ Locate a pair of solder blobs on the pcb directly behind the display and
short them together.
3/ Re-assemble (again, easier said than done).

Hope this helps.

So what?? Isn't it time to put to rest once and for all this myth about nothing being allowed to compete with the phone company. Your 2 meter ht is being used to evade Cellular Phone charges. Your packet message from NY to Ca is being used to evade not only long distance phone charges, but also postage. Big deal.

3287. I need a gizmo!

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-14 15:42:18 UTC
From: helliott@losat.redstone.army.mil
Message-ID: <3k4i42$q6l@michp1.redstone.army.mil>
Source record: 250888

I have need of a gizmo, and I don't know how to go about building it.

I want to put together a device that would allow me to pipe my mobile radio audio output through my car stereo speakers, and I want the device to mute the stereo audio anytime audio comes out of the mobile. The channels need to be independent, since the dual band radio has dual audio outputs. Audio on the 2m band would mute the left stereo output and pass through the 2m audio, while the right side would do the same (independently) for the 70cm audio.

Any help or suggestions?

3288. Public awareness and image of ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-14 15:59:11 UTC
From: gdm@fermi.ualr.edu
Message-ID: <3k4egf$i3s@news.ualr.edu>
Source record: 250885

As evidence of the decline in awareness of ham radio by non-hams, I offer the following account of an incident that occurred yesterday evening:

My son, who passed his Tech exam on February 25 and received his ticket in the mail yesterday, decided to take it and his new handie-talkie to his Boy Scout troop meeting to show them off. The Scouts have historically been involved in amateur radio, right? Well, guess again. The scoutmasters confiscated his HT until after the meeting and told him not to bring it back.

I realized that some education was needed and I started immediately with the head scoutmaster. She said that they didn't object to ham radio per se, but they just didn't know what it was. (Said they thought it was a "regular" radio. I'm skeptical about that excuse.) It looks like someone is going to have to step in and let this new generation of scouts and scoutmasters know what ham radio is and isn't, and that "someone" is us.

|>Just in case the minimum is fine with you...maybe you just want CYA
|>coverage with your landlord? Ground rods for semi-temporary living
|>quarters are VERY easy. Go out and buy some 1/2 inch copper PIPE.
|>Preferably in 10 ft. lengths. Slip your garden hose over the end of the
|>PIPE and tighten down with a small size hose clamp. There should be no
|>reason to modify the hose for this. Hook up the hose to a water faucet
|>and turn the water on. What you have now is a hydrolic drill that is 10
|>ft. long. Simply push the rod into the ground, no hammering no sweat,
|>just some mud...it is up to you to decide how many of these you want and
|>how far to space them apart from each other. I know there will be purist
|>out there who will demand a SOLID rod be driven into the ground. But
|>lets face facts, you ground your tower, (or chimney mount) you put
|>polyphasers in-line with your coax, and you still don't really know if
|>you will get nuked by mother nature.

I would recommend this only after other methods have failed. In particular,
washing out soil from around the ground pipe defeats its purpose. Instead,
use the copper pipe but drive it with a butterchurn motion. Make a small
hole with a shovel and add some water. Then push the pipe down into the
center of the hole with a turning motion. Pull the pipe back up a little
with a turning motion. Then repeat. You should easily be able to drive
the pipe into the ground 8-10' unless you hit a large rock. Even then,
a water drill won't help. Also note that cutting the end being driven
into the ground into a point helps in driving the pipe.

I'm told for an even better ground, pinch the end of the pipe together
before cutting into a point. Also drill a number of holes into the pipe.
Then after driving the pipe into the ground, fill it with rock salt. Every
few months, add a little more rock salt and you should have a great ground.

> Local police agencies cannot confiscate amateur equipment regardless of
> the crime committed.

C'mon David...think a little bit.

If you hit someone over the head with your handheld and killed them,
could the radio not be siezed as "evidence?" (The old Motorola
"bricks" were entirely capable of this, by the way.)

Applying your logic might well give someone license to commit
murder. Fingerprints on the "murder weapon" would also be thus
inadmissable, and no proof of your culpability could be presented
in court.

You're correct. Local cops can not enforce FCC rules. I'm sure
that's what you meant to say.

Wowsers, whatta thread! Lets remember a couple things here.

We're talking about people are who trying to be prepared to
serve their fellow citizens in an emergency. I think we can
all agree that's in the best tradition of Amateur Radio.

But I hope those same, concerned folks, would give some
consideration to the problems involved when strangers pop
up on a public safety frequency. That is also a major concern.

We've quoted the law- and had little discussion of the practicality.

The proper place for non-cops to hook up with police is the
911 telephone system. I would only hope that as much effort
would be put into that option as I've seen in this thread.

Then, knowing you've done your best in that area, do whatcha
gotta do. I may think modifying ham radios is a bad idea, but
I can't say anything bad about the goals of those who are
clipping diodes.

Wd0hxt (wd0hxt@aol.com) wrote:
: WOW, there sure are a lot of opinions out there.
: So let me add to the debate the following:
: Part 97 is just that-- "PART"
: It is only one small portion of 47C.F.R.
: Subparts of part 97 are there to clarify. and outling the guidlines under
: which a station may be operated as a part 97 station.
: 47 CFR 97.403 is a standard disclaimer in nearly all parts of Federal law.
: What is saying is that part 97 alone can not be used as sole justification
: to prosecute an amateur operator who operates out of band on modified
: equipment WHEN THAT OPERATION IS JUSTIFIED UNDER LAW.
: For example, an amateur radio operator who is the only operator able to
: copy a distress call on International maritime freqs could, under
: international maritime distress regulations, respond to that cal because
: it is allowed under maritime distress regulations. Provided that when an
: agency that is dually authorized to that freq IS ABLE to provide
: communications to said maritime vessle the amateur relinquishes his use of
: the freq to the authorized station. Therefore part 97 DOES NOT PROCLUDE
: the authorization under maritime law for ANY STATION to provide initial
: contact.
: What part 97.403 DOES NOT authorize is the use of the modified ham rig to
: contact the local PD in the event of an emergency on their dispatch freq
: just because it is more convenient for the operator that to use the freqs
: he is licensed for.
: Yes, under current law an amateur radio operator could modify his rig to
: operate out of band and still be ok. But, when he actually DOES operate it
: out of band he better make sure that there is NO other means available and
: that he IS AUTHORIZED UNDER SOME OTHER POINT OF LAW TO CARRY OUT HIS
: TRANSMISSION, because part 97 ALONE does not give him that authority.
: If you really want to know whether you are authorized to do it, get a copy
: of the entire 47CFR and read it, then throw in a little international
: maritime regs. Then add some Federal disaster regs. When you have read and
: understand ALL OF THOSE then you will be ready to decide if you are
: whithin you rights to transmit on certain freqs under what types of
: emergency situations.

: Ed Fairbairn
: wd0hxt@aol.com
: edf@bbs.wd0hxt.ampr.org

Ed, I think this may be the RIGHT answer. But it's a ridiculous
requirement. Who is going to do all this? Amateur radio is a
HOBBY, and I for one don't feel that it's incumbent on me to learn all
the laws for all services before trying to get emergency help. If I
try and exhaust all clearly authorized means to get help in a

life-and-death situation, and there are other, non-authorized freqs available, I think I would use them if I could. "Skin before tin before ticket" is the motto in this case. I would also let the legal system sort out the mess after, if necessary, and be willing to take responsibility for my actions, etc. After all, a radio or even a license is a small price to pay when measured against saving a life.

BTW, none of my radios are modified for TX out of band, nor do I think I will ever do the mods. I believe that my chances of ever being in the situation where TX on police dispatch frequencies was the only alternative are laughably slim. But if I ever have to, and have the means, I don't think I would ultimately let the laws or the minor consequences stop me (I would hesitate and try to evaluate the situation carefully, of course.) I'm on pins and needles waiting to hear the final outcome of the case in San Diego; I hope that ham gets his radio back eventually, and gets recognized for the hero he is. The sheriff's department involved in the confiscation is pusillanimous from what I've read. That ham should be vindicated. But if not, so be it. That would cause me and quite a few others, from what I gather, to have one notch lower esteem for the law enforcers, if not for the law itself.

There, glad I got that off my chest!

Message-ID: <NEGAARD.95Mar14110051@draagen.graceland.edu>
Source record: 250884

A couple of months ago, someone referred me to an article by Wayne Ryder titled "A 1.8 - 30 Megahertz 100 Watt SSB Transmitter," published in 'Communications Quarterly: The Journal of Technology,' volume 4, fall 1994. I've been trying to obtain it through inter-library loan ever since, and today I finally got the bad news:

It seems that only two libraries carry the journal in question. One wants something like ten dollars (plus postage) to duplicate the article and send it. The other won't do it at all. So, I turn to the amateur radio community for assistance ($10 is a bit steep).

Is there someone out there who has the journal, could duplicate the article and mail it to me? I'd be happy to pay duplication and mailing costs in advance. Please contact me by e-mail if you can help. Thanks!

3296. Who do I contact for TVI in Racine WI

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-14 17:16:05 UTC
From: Paulette Quick <plquick@facstaff.wisc.edu>
Message-ID: <3k4j0l$h5@news.doit.wisc.edu>
Source record: 250892

I am requesting this information for a friend.

There is alledgedly a ham causing interference to the neighbors' TV and other electronic equipment. The location is Racine, Wisconsin, which is about 25 miles south of Milwaukee.

Who would a person contact regarding the interference problem? The OO for Wisconsin? A Milwaukee area ARRL representative?

Thank you for your assistance.

Paulette Quick, N9OUH
Madison, Wisconsin

3297. Re: QEX Publisher Info

Newsgroup: rec.radio.amateur.misc

QEX is a specialty publication of the ARRL (American Radio Relay League); it deals with technical matters and experimental designs. It's available by subscription to League members (don't know the price offhand). You can call ARRL at 203-666-1541, or route an email query to their online rep, Mary Carcia (mcarcia@arrl.org).

Another technical publication on the market is CQ Communications' "Communications Quarterly" magazine. It is a purely technical journal, with an increasing emphasis on the relationship between computers and ham radio. It's available on newsstands for $9.95/copy, or by subscription from CQ (1-800-853-9797 / 516-681-2922) for $29.95/yr (US - higher for DX).

Well, of course the amateur allocations are only a small part of the
airwaves, so such an exclusive useage won't come about no matter what
our licensing requirements are. Nobody is against having a good time,
but such a desire alone is hardly enough justification to award an
amateur license.

Source record: 250900

The latest Antenna Compendium, volume 4, has some performance comparisions in the article "An Investigation Of 2-Meter HT Antenna Performance." According to measurements, the long extended whips outperformed the worst duck antennas by about 10 dB. They did a lot of work--its 7 pages long.

Windows will definatly run on a 286, I did that for a year or two. It ran
okay on my friends machine with 2megs and mine with 4 megs was fine.
And giving Windows to him would be quite illegal (so?)

Hello!

I was asked to post a message for a friend of mine who is not on the Internet:

He is attempting to restore his old HeathKit DX-20, which was his first rig.
Unfortunately he does not have the manual or schematic for the transmitter.
If anyone has either available for that particular radio, please e-mail me at
treit@seanet.com or send the information to:

George, K7BDU
163 Keasling
Chehalis, WA 98532

Many thanks!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 MARCH AND FORECAST FOR 15 MARCH - 17 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 13 Mar
Daily Proton Fluence >1 MeV: 3.8E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.6E+09 (very high)
X-ray background: A3.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Mar 16 Mar 17 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Mar: 82/23

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 13 Mar
Learmonth 13 3224 3332
Fredericksburg 14 29
Planetary 18 33

Observed Kp for 13 Mar: 3455 5543
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Mar 15 Unsettled
16 Mar 10 Quiet to unsettled
17 Mar 6 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

14 Mar normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Mar normal normal fair
16 Mar normal normal fair
17 Mar normal normal normal
Degraded HF comms are probable for high latitude circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
14 Mar 34 near to 15% enhanced, Townsvile was near predicted
monthly values, Hobart was near predicted monthly values during day,
then 15% below with spread F at night.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
15 Mar 30 Near predicted monthly values. mufs at hobart are
expected to be near predicted to 10% depressed.
16 Mar 25 Near predicted monthly values
17 Mar 20 Near predicted monthly values
COMMENT: HF conditions will probably be degraded for high latitude
circuits.

Anybody that makes a purchase on their RSVP card at Radio Shack should double check their receipt to make sure the salesman enters the proper promotional code. As a former Radio Shack employee I understand how easy it is to put a purchase on revolving credit when the customer asked for 0 interest, the sad part is that at that point, its too late. I am certainly not defending Radio Shack, just making everyone aware of the situation.

> this year.
>
> Dave Probert, KE6JRS

The FD rules from 1994 did require that the Novice station must operate under a different callsign than the primary entry. They also stated that no person may operate from more than one Field Day station. Therefore any person who operates the N/T station is automatically prohibited from operating the primary station at some other time during the Field Day contest.

The near-instant licensing processing pretty much ensures that this year if a person passes his test at least three weeks ahead of Field Day and the VE promptly processes the papers, he will have a valid call for the FD weekend. The other questions regarding unlicensed persons are addressed in the FCC rules.

4 hour commute? Perfect way to study the code! Pre-novices used to
build 80 and/or 40M converters for their car radios (with an added
BFO) to copy CW during their daily drive to work. I've got several
schematics I can draw up and email to you.

Also, get in the habit of translating license plates into code
(by humming or whistling). You'll be on HF in no time at all!

TELENT callsign.cs.buffalo.edu 2000 used to get me to a nice callsign lookup service. Now, when I try to connect to it, I get the message "sorry, this server won't let us use the SUPPRESS GA option! Disconnecting". Anyone know what the problem is? I don't understand it because I thought BUFFALO was in NEW YORK, not GEORGIA ;-)

Anybody have any thing to report about the Radio Shack
2m handhelds? Good, bad, indifferent, etc? I'm
contemplating a low-end (not much $$) purchase.

Wish you could get on Compuserve. We are having a big talk about that currently. I don't go beyond tossing an HT into my tank bag. Never did want to talk to anyone when I'm riding but have often wanted to put my old FT310D on the luggage rack and do some 40MTR Midcars.(g)

An exposed 4 dipole array (with downtilt if necessary). This antenna is rugged, at DC ground and is unlikely to degrade in a harsh environment. I personally prefer Sinclair, but dB products is also a contender.

GS>I bought a 2006 a while back on the "no interest
GS>no payment for 6 months" plan.
GS>On the monthly statement interest kept appearing.

GS>I thought maybe they would refund the charges
GS>at the end as some outfits do.

Sorry you had problems with that. I actually work at a Radio Shack and I have seen the problem before. What happens is that when the sales associate goes to the payment screen, they can pick what interest plan you get. (Right now there are about 6 different ones.) It sounds like that particular person picked the wrong one. If you've got your original ticket, it should say "0%" etc at the bottom. If it doesn't, then that was the culprit, if it does, then it sounds like you've got more of a legal case.
If you can't find the receipt, the stores keep a copy of them (a paper--i.e. hard copy (it's not "in the computer" so don't ask)) boxed up in the back, if you know the date that you bought it, then it can be looked up.

What I used was an arrestor on the feed line at the point which the line contacted the ground, This was attached to TWO copper pipes driven into the ground, connected by 6 guage wire. At the shack was another arrestor and a copper plate 3 feet long by 9 inches wide buried about 18" down. This was connected to the arrestor by 8 guage wire. Antenna grounding is very important in the mtns of Colorado. I've had three close strikes,

but not one piece of radio equipment was ever compromised. (Can't say as much for some consumer electronics, though...)

Cecil - I can't hum notes from a piano either; I also cannot read music,
have a horrible singing voice and am totally tone-deaf. However I can
copy CW at 25-30 wpm. There isn't really a correlation. I'd be curious
how much time he has spent working on trying to tell the difference
between dits and dahs - it does take a little practice, and my experience
(I've had a fair bit, having been involved with several novice classes and
having served as a VE for 6-7 years) is that most people who claim they
cannot learn CW have never really given it an honest try or else have gone
into it with such a negative attitude that they never had a chance to begin
with.

Another item to consider: VE's are allowed to make adjustments in the CW
exams to accommodate people with "handicaps". This can include such
things as sending at a lower or higher tone pitch than the standard 730
Hz; I don't see why the weighting couldn't be changed as well. Our VE
team has made special tapes several times for people with such problems,
and programs like SuperMorse or Morse Academy (which has a built-in test
giving function and is approved for use in real testing situations) may
well have the capability for making such changes as well.

3335. Connector losses

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-15 05:39:31 UTC
From: mckee@fc.hp.com
Message-ID: <3k5uij$ibp@tadpole.fc.hp.com>
Source record: 250730
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

I am setting up my Yaesu 747 to be the IF for a transverter. The rig uses some small coax with "Weird Yaesu coax connectors" to connect the RF board to the power amplifier and to connect the antenna to the receive-in on the RF board.

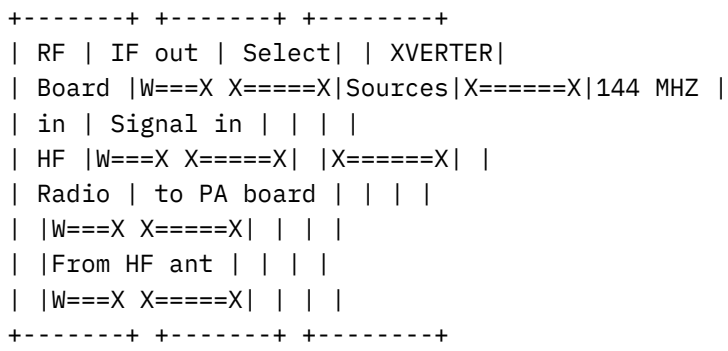
I called Yaesu and a very friedly fellow took my $$ and promised to send me a couple of pieces of the coax with the ends on them. I'd like to cut them in half, and put some sort of reasonable connectors on but, I am wondering about signal loss.

My hopes are to build a source selector so that I can use the setup as:

Simple HF radio (IF out routed back to PA board, HF antenna routed to Signal in)
Simple 2M radio (IF out to Xverter, Signal in from Xverter)
Satellite mode A (IF out to Xverter, Signal in from HF antenna)

without haveing to take the lid off all the time (the connections to the RF board look fairly fragile), and without having to spend 15 minutes connecting identical looking cables to the wrong places so that I can just miss a good satellite pass.

I'm thinking of something like:



Where W represents a "weird connector", and X represents a reasonable connector. The back-to-back connectors will be on the back of the radio. I need them because the coax with the weird connectors is short, and the connectors are "supercrimped" on and don't look like they will come off in any state to be put back on, and Yaesu does not sell them unattached. [sigh]

Unfortunately, to use it as a simple HF radio, the output signal must go through EIGHT connectors (SIX of which I'm adding). This has me worried about the losses from those connectors. My _ARRL Handbook_ does not have a table of connector losses, and I'm hoping someone out there does,

or has a better idea.

I could replace the back to back connectors with four very small PC board boxes, soldering the coax together inside. I could also directly wire the source selector to the cable. Or am I just worrying about nothing??

Thoughts???

73, Bret

: In this case no, I don't think so - there would be no communications going
: on.

: Where video from a ground controlled RC airplane is legal under
: special provisions.

Since auxillary operation is allowed up on the high bands (above 222 MHz),
one-way transmissions should be legal. There are no real restrictions on
the "testing" you can do up on 10 GHz, so you probably could send a
string of dots/dashes. Identification every 10 minutes would be essential.
You could double as a microwave beacon station - depends on your creativity!
Making sense of the return signal could get difficult. -Ray

>I just wish some of those benefits would show up around here.

I think the overall affect has been positive in the Louisville area. One point to keep in mind is that many people entering the hobby don't know a lot about propagation. I readily admit that when I received my license in the mail in July 1993, I didn't know a Sporadic E from a Dislexic F. Thanks to a positive attitude, a lot of friendly "elmers" and a bit of studying, I have made quite a bit of progress.

The big key, in my opinion and experience, is education. I know I've been guilty of misreading some information and making statements on the air that showed what I knew -- not much. This is where the knowledgable person typically steps forward and says, "That's not quite right..."

As a perfect example, one night a fellow asked me about multiband HF antennas. I told him right off I didn't have a clue but maybe he could cut a 40 meter dipole and use it as a quarter-wave 80 meter dipole. Another fellow chimed in at that point and said, "Well, you can do that but I wouldn't expect it to work very well." I have learned quite a bit from the elmers. I've also learned quite a bit by reading -- LOTS of reading. But, I do have an advantage. I don't study the answers to the questions. I want to know WHY the answer is correct and the only way to do that is to study the underlying principles. I do like to read as well, so the ARRL Handbook has been my night-time companion.

Go for it, Mike. The only aspect of amateur radio that I regret is not getting my license 15 some odd years ago when I was in high school. The difficulties I had back then were learning the code (that was my fault) and not having transportation to Atlanta (90 mile drive) to take the test. I initially entered the hobby as a Technician then upgraded to Tech Plus and now General. I'm ready for Advanced but haven't taken the test yet. I also discovered that I really enjoy working CW on the HF bands.

It has opened a lot of doors for me as well. The biggest satisfaction, by far, is all of the friends I have gained since I entered the hobby.

3339. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-15 07:15:07 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.wNLZ2c1w165w@GRAFex.sbay.org>
Source record: 250734
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE525.EXE. Compile on your

system then uudecode UUEXE525.EXE. This is a self-extracting archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

1. Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know.

2. You have spelled the file name incorrectly.

3. The file name has changed since the INDEX was generated. Order a new INDEX.

4. You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

Try the PING command to check that the path is open.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to incoming@grafex.sbay.org. This email address is set up to flag me that there is something new that I need to take care of quickly.

Source record: 250742

Hello All,
TECHSAT1 will be launched on the 28th of March from Plesetsk Russia,
As Calculation show the Techsat-1 will be seen at the command station
in the Technion (Israel) only 8 hours after launch (sixth orbit).
The Techsat team would like the help of all of those who can monitor
the satellite during the time until and after the first 8 hours.
If you would like to help please contact us at the command station
using the addresses below.
Satellite operators that will want to help will be givven a telemetry
decoding program for the Techsat1.

Packet: 4z7aba@4x4hf.isr.mdle
Internet: 4x6em@techunix.technion.ac.il
Fax: 972-4-230956 (for Assi)
Phone: 972-4-292646 (ground-control)

Keplerian elements will be updated close to launch date
Satellite: TECHSAT-1
Catalog number:
Epoch time: 95087.37500000 (Seperaton)
Element set: 001
Inclination: 075.3991 deg
RA of node: 328.7324 deg
Eccentricity: 0.0015304
Arg of perigee: 101.9385 deg Mean anomaly: 355.9607 deg
Mean motion: 14.7000703 rev/day
Decay rate: 0 rev/day^2
Epoch rev: 0

The following are the downlink frequencies of the satelite:
35.225 - primary RHCP / 435.325 - secondary LHCP
Primary mode of operation 9600 bps MSK ,
secondary mode is 1200 bps BPSK (emergency only).

Thanks , Assi
Techsat ground control team

Jmmorrison (jmmorrison@aol.com) recently wrote
in <3jctms$isi@newsbf02.news.aol.com>:

: Is 420mhz-430mhz reserved strictly for ATV or can it be used for low power
: simplex comms also?

: P.S. In Metro Detroit, 420-430mhz can't be used at all for amateur radio
: but I was just wondering about most areas of the country.

Most areas of the country that have active linking repeater networks use the 420 - 426 MHz sub band for the duplex link channels. ATV uses the 427.25 frequency or 426 - 432 sub band. Simplex activities can always be found in the 431 - 433 MHz sub band. SSB activity is on or near 432.100 MHz. Other simplex activities can be found between 435 - 438 MHz. Most of this activity is ssb or fm use of satellites. Repeater users in the 440 - 450 MHz sub band talk simplex or car to car on the output of their repeater.

446.000 is the nation wide fm dimplex. In California 441.000 and 446.500 are also fm simplex in the repeater sub band.

H All,

Ook ik wil graag wat goedkoper met anderen in verbinding komen, maar ik weet niet hoe...nou ja...

Gezocht dus...

Packet modem compleet werkend (moet hem dus aansluiten en hij moet het doen) Baycom, maar het liefst een TNC (=beter toch??)

Ik heb hier een TNC2 modem, maar op de 1 of andere manier krijg IK dat @#$-ding niet aan de gang.

Ik gebruik het progr. Graphic Packet. Bij het opstarten van dit progr. kan m'n comp. de modem NIET vinden (sync...t/m 256 TNC antwoordt niet). Het progr. staat overigens GOED geconfigureerd.

Nu heb ik dat @#$-ding 'ns bij 'n andere "packet-freak" geprobeerd en daar werkt 'ie perfect.

Zelf denk ik dat het aan de relaisschakelaar ligt, (packeteers weten nu wat ik bedoel???), m.a.w. het kastje met schakelaar die tussen de modem en de computer zit.
Als iem. zo'n kastje heeft of iem. kan mij helpen om dat kastje/schak. te repareren, ook die mag, hoop ik, antwoorden.

In ieder geval zoek ik een GOEDWERKENDE packetmodem (compl. dus)

Prijsindicatie......f 150,=

Of....iem. die mij kan helpen om mijn modem te repareren...

Certainly anyone can operate any station with the proper licensed control operator present. If you are not making a serious effort, it is a great way to have a non-ham make their first contact. You will be rewarded with a large smile and maybe a recruit.

The rules state that the novice station should be used by novice and techs, not higher licensed people. But I would think that a non-licensed ham could give it a try with a control operator present.

I would think that anyone present at a field day site shouldn't be prohibited from operating any station (except for the novice station noted above). I believe the rule about operating at multiple stations only applies to going to another site. I will have to review the rules carefully.

>Because over here, we aren't allowed to 'work ourself' (eg: 9V1ZY to
>9V1ZY...)

Yes, we are allowed to "work ourselves" in several different ways.
One of the most obvious is with repeaters and digipeaters. I can
work the KE4ZV repeater from the KE4ZV station in the mobile or
the KE4ZV station at home. I can also work the KE4ZV-1 digi from
the KE4ZV packet station, and it can in turn work the KE4ZV-2
digi, etc. All that is perfectly legal. In addition, I can have
any number of auxillary link stations working under the auxillary
rules where *all* of them *must* have my call sign. That's because
under the auxillary rules, an auxillary station can only communicate
with other auxillary stations of the same linked system.

3355. FT2500-M Memory Cloning wire

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-15 14:13:47 UTC
From: kmf@tellabs.com
Message-ID: <1995Mar15.141347.8523@tellab5.tellabs.com>
Source record: 250776

MEMORY CLONING wire for the Yaesu FT-2500M radio:

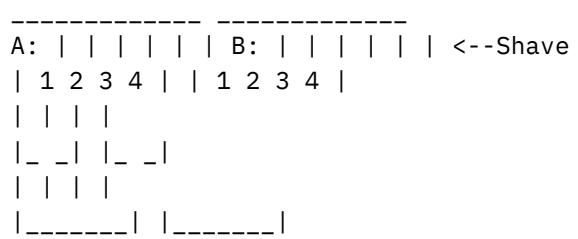
The owner's manual for the Yaesu FT-2500M 2m radio tells how
to clone memory from one radio to another, but it does
not tell how to hook up the wires between them. They do sell
the wire, but why not make one out of an old four wire telephone
cord laying around the house. The only wires that are needed to
be connected between the radios are pin 3 to pin 3 and pin 5 to pin 5
as shown below. A standard telepone wire can to be changed to accomplish this.

The mic plug is an 8 wire plug, but a 4 wire plug will fit, after shaving
the edges such that the outer wires will not bend. Pins 3 and
5 are in the middle 4 wires, so this plug will work.

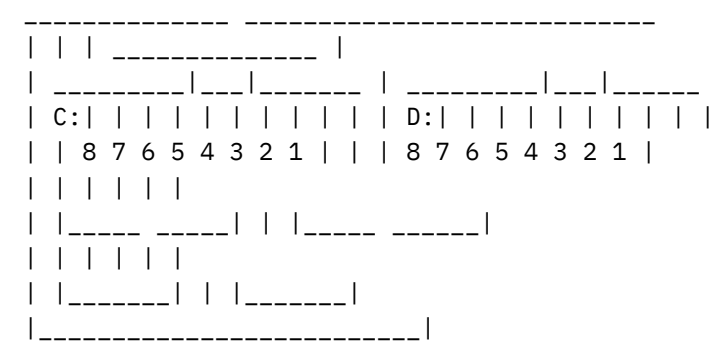
The instructions are below:

1-Get a standard modular RJ-11 4 wire telephone cord.
2-Shave the four corners of the plug that extend to the right of
pin 4 and to the left of pin 1. These need to be below the grade
of the connect wires (pins 1,2,3,and 4). If they are not shaved,
then the radio pins 1,2,7,8 could get bent.
3-Cut the line (4 wires) into 8 wires.
4-Now when looking into the plug with the wire going away and the
snap connector down, the far left wire (A-1) needs to be connected to
the far left wire (B-1) and the middle right wire (A-3) needs to
be connect to the middle right wire (B-3).
5-Insulate the connections and the unconnected wires (pins 2 and 4).
6-Snap either end of the wire into either the transmit radio or the
recieve radio. Pin (A-1) will connect to pin (C-3) and (A-3) connects
to (C-5). Also Pin (B-1) connects to (D-3) and (B-3) connects
to (D-5).
7-Follow the owner's manual instructions for memory cloning (i.e.
hold F/W while pressing POWER. Then REV for receiver and RPT for
transmitter).
8-Turn the power off. Remove the wire. Install the mic and check memories.

Looking into the 4 wire male telephone plug:



Looking into the FT2500-M radio eight wire female plug:



DISCLAIMER: This works great for me, but do not guarantee much else.

>Mary Carcia (mcarcia@arrl.org).

Last I checked, it's $12 per year for ARRL members. It's a real bargain
at a $1 per issue, and well worth taking a subscription. You'll find
something in every issue that's worth the cover price, and more.

>Another technical publication on the market is CQ Communications'
>"Communications Quarterly" magazine. It is a purely technical journal,
>with an increasing emphasis on the relationship between computers and ham
>radio. It's available on newsstands for $9.95/copy, or by subscription
>from CQ (1-800-853-9797 / 516-681-2922) for $29.95/yr (US - higher for
>DX).

To keep Rich from blowing his own horn too loud, let me be the one
to say that Communications Quarterly is an excellent journal. I've
found something worth the $9.95 in every issue. My only wish is that
it could come out more often, though I'll admit that would be hard
to handle if the per issue price remained $9.95. I'd sure pay $50
a year, though, for a 12 monthly issue magazine of this quality.

>VHF/UHF bandplands. Also, are there voice repeater and packet BBS lists
>available for that area, and if so, from where could I get a copy?

The ARRL is a little vague because their national bandplans have been soundly rejected in some quarters by the coordinators. To get the exact plans for Georgia and 8 other Southeastern states, pick up a copy of the SERA Repeater Journal. The 70 cm bandplan has been recently revised, so the ARRL Repeater Directory is somewhat out of date. The SERA listings in the Repeater Journal are the only definitive list. HRO in Atlanta should have the Repeater Journal in stock.

For packet in Georgia, you'll want to contact GRAPES for the State networking plan. GRAPES is the SERA designated packet coordinating body for Georgia. In general, it's 1200 and 2400 baud on 2 meters in the 144.91 to 145.09 and 145.61 to 145.71 ranges, and 9600 and 56kb on 70 cm.

>Finally, are there any laws relating to importing radio equipment? I'm
>planning to import my Yaesu FT-5200, Alinco DRM06, Kenwood TS780 and

>sorted out the appropriate USA licence :-)

I can't give you much guidance here. If the radios are importable under FCC regulations, and I believe the ones listed may be (at least if they don't cover cellular phone frequencies), then you shouldn't have any trouble. You may have to pay a duty.

When you get licensed here, drop by the 443.650 MHz repeater, CTCSS 100 Hz, and say hello.

While an actual radar system has not been put together in our (Dallas-Fort Worth) area, Channel 4 (KDFW-TV), with the help of local hams, re-broadcasts their doppler radar signal on the UHF Amateur TV band (approx 432 MHz). It is not broadcast all the time, but only during sever weather alerts in the DFW area.

Very interesting idea. I don't know of a circuit offhand, but you'd basically want to build some sort of a switch that would sense the audio from your rig when the squelch opened, then shut off the audio from your car radio to that speaker and feed through the ham audio. You'd need to build one for each speaker, of course, and be sure that, when you switch one source "off," it's routed to an 8-ohm load. There are plenty of cheap switching ICs on the market; I'll bet there are folks here who could help you with specifics. And when you finally get something designed & built, it might make an interesting magazine article.

>(independently) for the 70cm audio.
>
>Any help or suggestions?

Doc, getting rig audio out through the stereo is easy, getting it
to switch from entertainment audio to 2 way audio on demand is a
bit harder.

The no brainer method of hooking the 2 way to the stereo is to
just use a CD adapter. This is a "cassette" that plugs in the
stereo with wires coming out to connect to a portable CD player.
You just wire up left and right to the rig and you're in business.

An alternative is the CD adapter that goes in the stereo's antenna
lead and inserts a low power FM signal that you can tune on the
stereo. Again, just wire the two way's audio outs to the inputs
of the adapter.

Neither one of these does program muting when a call comes in.
They're all or nothing systems. If your stereo has external
amplifier jacks, and an external power amplifier, you can build
a switchbox to insert there which can be controlled by the two
way's COR signal. This is more involved, and requires minor
surgery on most two way radios to bring that signal out. If
your stereo is all-in-one, then you'll need to do surgery on
it as well. That can be a pain.

Doug --

Radio Merit Badge still puts an emphasis on ham radio, but as a radio merit badge counselor who has had zero applicants in about 6 years, I can assure you that that doesn't make much of a difference.

From another perspective, I'm an Assistant Den Leader in my son's Cub Scout pack, and it is endlessly frustrating to me that the people who are running the pack -- well-intentioned as they are -- haven't the foggiest idea of what the program is all about. I say this as someone with over 20 years experience as a Scouter on district & council levels.

What they need -- as you quickly realized -- is education. Perhaps you and your son should schedule a talk and demonstration of ham radio, for his troop, certainly, but also for the district "roundtable," a monthly meeting where all the Scoutmasters get together to learn about program ideas, etc. Ask your son's Scoutmaster for the name and phone number of the district roundtable commissioner &/or the district Scout Executive.

One final note: I noted that you referred to the "head Scoutmaster" as "she." I was under the impression that the BSA required Scoutmasters to be men (and had won a lengthy court battle over the issue). Has this changed?

Well, since you're a ham, maybe you can contact the neighbor and find out
a little more about the interference. As you may be aware, most of the
time, when TVI occurs, it is a problem with the consumer electronic
equipment, and not with the ham's station.

Of course, no one wants to hear this. However, a simple little high-pass
filter for about $5 purchased at the local Radio Shack and connected to
the antenna input of the neighbor's TV will probably stifle the TVI. It
might be good PR if you just go out and buy these filters and volunteer to
put it in. I've done that before, and the problem was squelched.

Yeah, right. I guess you never heard of Dick Bash, or the ARRL License
Guide, or the AMECO study guide. While only Bash had the exact word for
word questions and answers, the others were close enough not to matter
unless your memorization was *totally* mindless. Even in the far distant
"good old days", the tests were never *that* tough or comprehensive.
Aside from the legal mumbo-jumbo that has to be memorized in any event,
and can change on political whim, the technical side of the tests has
never been very hard or very comprehensive, just some very rudimentary
circuit theory, and a small bit on near-DC propagation.

If you think merely passing the 1978 exam qualified you to discuss VHF/UHF
propagation modes intelligently, think again. Quick, what's the effect
of terrain roughness on your 50 uV contour at 70 cm?

Paulette --

First of all, you should make your neighbor aware that not only hams "cause" TVI -- and that unless he/she is certain the interference source is a ham, then he/she shouldn't be too quick to pin blame. Secondly, the neighbor should realize that, while the interference occurs only when a particular station is transmitting, the problem most likely lies in his/her home entertainment equipment, which most likely is not properly shielded/filtered against intereference from nearby signal sources. And the only way to resolve the problem is in cooperating with the person whose signal is resulting in the interference.

That said, there are two routes you can follow:
1) Contact a local club in the area and see if they have an RFI committee that can help track down and help resolve the problem.
2) Contact your ARRL Section Manager (see Pg. 8 of any recent QST), and ask to be put in touch with the section Technical Coordinator. There may be one or more Technical Specialists in the area who can help. Your SM may also be able to direct you to a club contact.

Indeed silly you. It's not even covered in any meaningful way on the
Extra exam. But now that you mention it, what *is* the absorption at
2 meters of snow and ice? Say at a rate of fall of 1 inch per hour.
Bet you don't know. I know, but that's because I have to know as a
part of my profession, and it wasn't on the commercial license exam
either. It was something I had to learn *after* being licensed.

Quoting Wcoyle03-07-95 21:19elphi.com to All <=

>If anyone knows who I would contact at General Motors
>(Chevrolet) about guidelines for installing 2 way radio
>equipment in a GM vehicle, please let me know. I tried the
>customer service # in the owners manual and they were no help.
>My primary concern is voiding my warranty. I'll be primarily on
>2 meters.

When I wrote my September 1994 QST article about the auto manufacturers' policies, GM told me that their published installation guidelines represented GM's sole statement of policy. They also told me that the dealers and dealer network would be able to answer questions, supply the GM installation guidelines.

As can be seen in the article, GM customer-factory service does not know anything about technical bulletins or EMI problems. Apparently, they keep a staff there just to tell people to contact their dealer. From reports I have received, some dealers are not able or willing to locate the GM installation guidelines.

Each GM subsidiary has their own numbers. To help, here are the TSB numbers for each:

Buick - 93-9-1
Cadillac: pending, bulletin number was not available at press time
Chevrolet - 93-24-9A
Oldsmobile - 93-I-07
Pontiac - 93-9-1
North American Truck - 93-9-23
Canada - 93-8A-104
Saturn - pending, it was reported that they were working on a possible video

The GM installation guidelines were reprinted in the ARRL book, "Radio Frequency Interference: How to Find It and Fix It." ARRL Members can obtain a free copy of the guidelines by sending a large SASE with two first-class stamps to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. Ask for the "GM Installation Guidelines" package.

Refer to my articles in September 1994 and March 1995 QST for additional information.

: For very high power use, more than amateurs are allowed, the C or the
: EIA connector will be used. The C connector looks like a N connector
: on steroids, and the EIA connector uses a bolted flange. It comes
: in several sizes.

The C connector is a quick disconnect bayonet connector that might
be considered an oversized BNC connector. Its about the size of an
N connector. There is a high voltage version that handles 4 kV, but
is only rated to 2 GHz. Standard Amphenol C connectors have the same
specifications as the N connectors--0-11 GHz, peak voltage rating of
1500 volts. I've heard of one VHF+ contestor using C connectors on
his portable equipment--reduces setup time compared to N connectors.
They are often reasonably priced at hamfests, like most other oddball
connectors.

: The higher the frequency the higher the loss with PL-259 although the
: lower U.H.F. freqs it will work for.

Actually, high quality PL-259s have relatively little loss. The problem
is the impedance mismatch, not the loss. Thus, you have to be careful
about replacing UHF connectors with N connectors on 70 cm gear. The
equipment may require re-tuning to compensate for the lack of an
impedance bump. At 2 meters the impedance bump is small enough to ignore.

losses thru any connector at hf are normally nothing to worry about, in my opinion.

>>I could replace the back to back connectors with four very small PC board
>boxes, soldering the coax together inside. I could also directly wire the
>source selector to the cable. Or am I just worrying about nothing??

I think ur just worrying about nothing. Here's what I did many moons ago:-

1. Fit a switch in the logic cable that disables the pa board (see below)

2. Snip the mini-coax leads in half (both tx and rx) and attach them onto the back of a couple of bnc connectors or similar on the back of the rig. (if you do it carefully you won't even cut the braid) I use BNC connector because they are easy to connect up when they are at the back of the radio when you are all fingers and thumbs, but make a note of the positions of the TX and RX connectors so that you don't "brown-hole" it and stuff the RF out up the RF in hole etc

3 Either swap the bnc leads to connect up the kit or fit a 3-switch to select the direction/source required.

Note that you don't have to worry about the switching rf away from the pa if you use the logic line to disable the pa altogether ..... hang on, I'm getting the service manual out......
it's a 3 wire lead from the main board to the pa unit:-
J06 on the main board, pin 1=gnd, pin 2(centre, the one to fit a switch in) TX9V, pin3=13.5v this connects to...
J03 on the pa unit

this is what you should have....

<------------\ /------------>
TXmain bd \ / paTX
\/
bncTX pa unit (now switched) (please, no jokes
about class D etc :-)

<------------\ /------------>
RXmain bd \ /
\/
bncRX paRX

---------------------------------13.5v
pa sw/ off
J06-----------/ --------------------TX9v J03 pa unit
main bd on
---------------------------------gnd

If you get problems with breakthrough on the receive side either manually disconnect the main hf antenna out of the back of the pa unit (PL259) or fit a coax switch in the feedline.

NOTE
You can also use the bnc o/p as a low level, synthesised, all mode signal generator. If you have general coverage TX enabled it's very useful on the workbench, but turn the pa off before you start! I'm a UK class B licensee so I've cut the TX9v lead altogether, so I can't make any cock-ups when servicing commercial kit.

The o/p from the TX drive is quite low, so it may need a stage of amplification before driving a transverter.

Good luck

Gordy

: afford right now, because the rig will likely last for many years, so you
: should get as much as you can in your initial purchase. Today's rigs are
: so miniaturized and so complex that it often costs more to gather the
: parts needed for building your own than to buy a commercially-produced
: radio. That's why there are so few kits out there anymore.

Actually, there are quite a bit of kits out there. However, most of the
kits are either for simple projects (QRP transceivers) or advanced projects
(microwave transverters or DSP platforms). But, Rich is right if you want
a basic radio for the purpose of talking to people, you are better off
buying one. Building is great for learning--but only a few experts can
save money by building their own all band/all mode HF transceiver. Clubs
like the QRP Club of New England and the Northern California QRP club have
had a lot of success with club projects--I'm not sure if the next NorCal
project will really fall into the "simple" category...

: There are still people using transverters for SSB/CW work on VHF/UHF;
: they're a lower-priced alternative to buying separate multimode rigs for
: each band. Unfortunately there aren't many out there (I don't know if
: anyone still sells them new), so you'd have to build your own or scout
: around at flea markets.

Ten Tec sells a 6 meter transverter kit.
Down East Microwave sells kits and assembled units--all the way
through 5760 MHz.
SSB Electronics sells transverters, but these German imports
aren't cheap.
Tokyo Hi Power also sells tranverters, but I don't think anyone
is importing them from Japan at this time.

That's amazing! Especially since the specs say only 6W out with 13.8V in.

StationMaster antennas have been used in Commercial systems for
years with great durability and performance, but at quite
high costs. We recently removed one from one of the towers
we are on, had been there since the late 50's, and still worked.
It was badly chewed up, though. In fact, we used it one winter
for 146.88. We replaced it with a Diamond Dual bander, 440/
146 with 6 db gain at 146. Thing to watch, is not to go for
excessive gains, or you'll tend to find poor signal areas in
lower terrain elevations.

: my 2-meter handheld. Has anyone in Southern California had any luck in
: doing so? Does it take a biiiig antenna? I feel stupid because I can
: pick up things like Radio Havana and Radio Austria, but not W1AW which is
: so much closer. Send advice!

W1AW is located in Newington, Connecticut. Forget any chance
of receiving their broadcasts on 2 meters...just too far.

Your best chance is to try any receive their high frequency
broadcasts (3.5815MHz, 7.0475MHz, 14.0475MHz, 18.0975MHz and
21.0675MHz...these are the W1AW Morse Code frequencies)

The W1AW voice frequencies are: 3.99MHz, 7.29MHz, 14.29MHz, 18.16MHz,
21.39MHz and 28.59MHz.

Hope that helps.
Cheers,

I have to agree. When I went to Detroit to get my general in 1967, workers were tearing out the back wall of the office while we took the code test. The examiner wasn't about to cut us any slack, because "Conditions will be difficult on the air, after all." These guys had about the sense of humor of IRS agents.

Now that I'm going for my extra, the advice I'm getting is to use one of the computer-based packages to get up to speed. Essentially this amounts to memorizing the questions and correct answers. Even a longtime friend, who knows the world about electronics theory, advises me to focus on the questions, and not even to read the chapters in the _ARRL Extra Class License Manual_.

A lot of the folks who are debating the merits of code/no-code seem to have forgotten that lack of math skills made passing the general exam as much of a nightmare to those who could copy 15 wpm or more, as the code was to others. Simple algebra, like rearranging the variables in Ohm's law, was a tremendous obstacle.

|>The FD rules from 1994 did require that the Novice station must operate
|>under a different callsign than the primary entry. They also stated that
|>no person may operate from more than one Field Day station. Therefore any
|>person who operates the N/T station is automatically prohibited from
|>operating the primary station at some other time during the Field Day
|>contest.

Could we get a clarification on this from the ARRL? I was under the
impression that the N/T station was still part of the "one" field day
station for purposes of operating and scoring. As such, novice tech
operators could also operate the other stations. If this is not the case,
then I think the rule should be changed. We'd love to let the N/T in our
RACES organization operate any radio they'd like to try. That only seems
to make sense. Should they be prevented from making satellite contacts on
our satellite station because they operated their N/T station? I think
not. Billy Lunt, what say ye?

I just want to broadcast my appreciation for this WWW server. I have scoured the Net for International Callbook servers and could not find any when I read a post in this newsgroup about IK4LZH's WWW page. It's a BEAUTIFUL interactive database that let's you do queries but also let's you update existing QSL info and add new info for new callsigns, international or domestic (speaking from my U.S. perspective.) Check it out and use it. I have put in more calls than I've taken and over time, with everyone contributing, especially for rare operators currently on the air, this database promises to be superior to any CD or paper callbook resource that could be purchased.

Thanks to IK4LZH!

|>
|>do they still have the radio merit badge or is that all wrapped up in
|>a "communications" badge these days?

Yes they do, but apparently it is not a very popular merit badge. A friend
of mine is a merit badge counselor for Radio Merit Badge and in the last
some number of years hasn't had anyone come for the badge. Apparently all
the press about child molestation has greatly curbed the use of merit
badge counselors that are not directly associated with the troop. What
an unfortunate state of affairs! I would certainly never have gotten
a bronze palm by only going to my troop's merit badge counselors.

Also, I would have thought it would be common courtesy to check with the
scoutmaster before bringing something for "show-and-tell". As to not
knowing what it was, sounds like a perfect opportunity! I have given
amateur radio demonstrations to boy scout troops and they love it. Nothing
like hearing AO-13 and the BBC to peak their interest. Call the scoutmaster
and volunteer to put on a presentation on radio communication. Use that
as a chance to explain amateur radio, emergency communications and its
relevance to the Boy Scouts, existing scouting related radio activities
such as the Jamboree On The Air, etc.

I was first licensed back in 1977, and I didn't have to go face
anyone down. My novice test was given by a volunteer, and I
passed the elements leading to an Advanced class license at the
San Francisco FCC office over the time frame of 1978-1980. I
took these tests in groups, and the proctors were all very pretty
young women.

I passed the Extra elements in a VE session. No notable difference
in the process other than I knew the people proctoring the exam in
the first place.

As many have pointed out, there were plenty of know-nothing hams
even in 1978.

Several repeaters are listed in the ARRL repeater directory, but some of the active local ones are: 147.36+ in Wallingford, 146.61- in New Haven,
145.29- in Killingworth, and 147.09+ in Glastonbury.

Club addresses can be obtained from the ARRL (a Conn benefit - it is somewhat local about 30 miles north of New Haven) telephone 203-666-1541.
Some clubs are:
SCARA - Southern Conn ARA in New Haven
MARC - Meriden ARC in Wallingford
SARS - Shoreline ARS in Killingworth
?ARA - Milford club
If you want any info about MARC e-mail back to me.

>>radio stores, etc for the New Haven area.
Limited for ham radio equipment...Rogus Electronics in Southington and Lentini in Newington

3389. FCC Reprimands K1MAN ? ? ? ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-15 19:06:55 UTC
From: HWDX09A@prodigy.com
Message-ID: <3k7dsf$1aae@usenetw1.news.prodigy.com>
Source record: 250684

The following was printed in the March 1, 1995 issue of the W5YI Report
and is a very interesting responce to K1MAN on the ongoing interference
complaints with I.A.R.N. bulletins. The FCC attitude is refreshing.

Dear Mr Baxter :

A matter was brought to my attention several days ago that I need to
discuss with you. We have been informed by certain amateur radio
operators
that you claim to have an ex-clusive right to use a certain frequency
and
that you are telling other amateur radio operators that if anyone uses it.

I will revoke their license. Since the first person who complainded to
us
would not have any reason to know my name it appears the allegation
might
be true. We are investigating

I have suggested to the Field Operations Bureau and the Wireless
Telecommunications Bureau that if you have, in fact, in the alleged
conduct, they should consider holding a hearing to determine your
fitness
to remain an FCC licensee. I am making no representations as to whether
or not such a hearing would be held or what the and what the result of
it
might be. However, if you are using my name or the name of any other FCC
employees to threaten other amateur radio operators with sanctions, you
should cease doing so immediately. You have been a licensee long enough
to
know the proper complaint channels.

I have also received a copy of a letter you sent to an Assistant
United States Attorney in Maine. For your infor-mation I did not write
the
letter Ms Malone sent to you, but I do concur with it. Your reply
suggests
to me that you may very well lack the character qualifications to be a
FCC
licensee. You certainly lack the maturity but that is, unfortunately,
not
grounds for revocation. While we do encourage people to bring violations
to our attention, there is a fine line between being a good citizen and
making improper threats. At the very least, you appear to be close to
that
line.

If it is ultimately determined that you have made improper threats, that determination could result in a hearing to examine youe fitness to remain an FCC licensee and/or criminal prosecution. I make no representation as to what the outcome of any proceeding might be since I am not the one who will make that decision. However you should take Ms Malone's and this letter very seriously.

Although you have not used lawyers in the past, I suggest that you consult with an attorney knowledgable in FCC procedures about your alleged
conduct. I also urge you to consulty with an attorney concerning MS Malone's letter. To provide you with some incentive to do this, let me say
that if you wish to communicate with me for any reason, it must be done through an attorney. I will not accept any letters or telephone calls from
you personally. Besides for making for more orderly procedures here, using
an attorney would clearly be in your best interests. I would also strongly
suggest that you not send letters to anyone similar to the letter you sent
to Ms Malone. As I previously indicated to you, such letters suggest to anyone who reads them that you may indeed lack the qualifications to hold
an FCC license.

We just replaced our repeater antenna (2m) with one of these. The original
was also a SS that had been in service 25 years. Definitely a good antenna,
but pricey, as it's commercial grade. I think we (the club) paid around
$600 for it.

> agree.

I'm no lawyer either, and I don't agree with theft of software, but
after reading the license, I think I can disagree with your assessment
of whether or not giving away an unused copy of a program violates
Microsoft's license agreement (or the law, for that matter).

From the "Microsoft License Agreement" found in the front cover of the
"Read This First" booklet packaged with Windoze, Windoze for
Workgroups and the upgrade version (my comments in parentheses):

(Section 1 covers permission to use the product and when it is
considered "in use.")

2. UPGRADES. If the SOFTWARE is an upgrade from another
software product licensed to you, whether a previous Microsoft
product version or a third-party product, the SOFTWARE must be
used and transferred in conjunction with the upgraded product,
unless you destroy the upgraded product. If the SOFTWARE is
an upgrade to a component of a package of software programs
which you licensed as a single product, the SOFTWARE may be
used and transferred only as part of that single product
package, and according to the License Agreement earlier
provided with that single product package.

(Section 3 covers what material is covered by the license and
when it may be duplicated.)

4. OTHER RESTRICTIONS. You may not rent or lease the
SOFTWARE, but you may transfer the SOFTWARE and accompanying
written materials on a permanent basis provided you retain no
copies and the recipient agrees to the terms of this
Agreement. You may not reverse engineer, decompile, or
disassemble the SOFTWARE, except to the extent that such

foregoing restriction is expressly prohibited by applicable law.

(Section 5 covers software distributed on multiple media in
the same package. Section 6 covers language software and
isn't applicable to the Windows products.)

If you've read and understood sections 2 and 4, ask yourself these
questions:

- Is the Windows license transferrable?
- Is Bob's copy of WFW covered by a new license?
- Has Bob met his end of the transfer terms?

Keeping in mind that Bob never mentioned whether or not his copy of
WFW was an upgrade kit and assuming he'd physically transfer his old
copy of windows to Jonathan (as opposed to shipping it over the 'net),
would anybody care to give a *definitive* answer as to whether or not
Bob can transfer his old copy of Windoze to Jonathan? (For more
thoughts on net.lawyers, see the .sig quote below.)

>If the VE had another duty which was to prevent registration of the non-
>qualified, you would indeed have a point.

Umm, but that *was* my point. I think we're agreeing here. The VE is not assuring he is qualified. Thus the issue of whether "these rules" refers only to part 97 or to all of Title 47 cannot be inferred from the fact that it would be unreasonable for the VE to need to apply this larger body of rules, as you were arguing, since the VE isn't responsable for assuring that the examinee is meeting them.

> The absence of a declaration

>I appologise for appearing to imply otherwise.

Not necessary, but thanks anyways. People are taking this whole discussion far too seriously.

Anyone out there with a list of ham freqs for Washington, Oregon area of US? Please email whatever you have. The call guide that I'm using just says what range to look in, but I'm using a programmable scanner; I can't scan a range to find you hams...

Thanks,
Will Middleton
Seattle, WA

: in broadcast applications and on larger cables for their high power handling
: as well as ease of pressurization across cable junctions for air lines.

Interestingly, according the the Andrew catalog, N and HN connectors have
the same *power* rating at 900 MHz, 0.6 kW, even though HN connectors have
twice the DC test voltage rating (4 vs 2 kV). Doesn't look like N
connectors will handle the legal limit on 23 cm--are there special versions
available?

|> did it take? Thanks. 73, Tom WB4iUX

I sent in an address change on the 29th of December 1994 and the license was renewed (Old
expiration was
23-Aug-1994) with the issue date of 05-Feb-1995 and I received it on February 7th.
Looks like that was 5.5 weeks

>either. It was something I had to learn *after* being licensed.

Yes! A ham radio license is a beginning for a lot of people. But I think what's happened/happening is that so many licensees really aren't interested in learning beyond what it took them to GET the license, and THAT may be what underlies what is being objected to. These people just want to get on the repeater and talk about their headaches.... ;-)

When I got my Novice license in 1963, I knew nothing (about radio!); When I got my General, and later Advanced, I STILL didn't know all that much, but I kept interested and eager to learn more and more. I'm attracted to those hams who have a similar attitude.

> Microsoft's license agreement (or the law, for that matter).

This question needs to be answered first. There are wo versions of WFG 3.11:
an upgrade version, to be applied over Windows 3.1, and a complete version.
The original poster did not indicate which one he had, but, if it was the
latter, I see no problem with him giving away his old copy of Windows 3.1.

This is not significantly different than intentionally buying an old version
(I receive a catalog from an outfit known as "Surplus Software". lots of
old software really cheap) and promptly buying the new version at the upgrade
price.

Except that one doesn't need to "get on" the low bands to learn about
propogation, even first hand. Most people *listen* before they transmit.
By listening you can often determine what propogation is like and about
its effect on signals. This can be done without passing a 5 WPM beeping
test. But in neither case (transmitting or listening) will first hand
experience teach you much of anything about why or how propogation occurs.

: Some time ago, a formula was published for the density of the sulfuric acid in
: a lead-acid battery and the state of it's charge (% charge). Naturally I filed
: it away for future reference. Now that I need it, however, I can't find it!
: Could someone, with a better filing system than I have, please send me the
: relationship again?
: Thanks,
: Dale

Hope I can help you Dale. Here's what I know: A fully charged lead-acid
wet cell should have a sulfuric acid concentration of about 30% by
weight. A fully discharged battery will be near zero. A 30%
sulfuric acid solution has a density of 1.2185 g/mL. Assuming a linear
relationship of charge v. concentration, a suitable formula would be:

density = 0.002185 * %charge + 1.000

or rearanged for %charge:

%charge = (density - 1.000)/0.002185

Hope this helps.

ISSUED AT 15/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 MARCH AND FORECAST FOR 16 MARCH - 18 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 14 Mar
Daily Proton Fluence >1 MeV: 1.8E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 4.2E+09 (very high)
X-ray background: A9.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Mar 17 Mar 18 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Mar: 82/23

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled.

Estimated Indices : A K Observed A Index 14 Mar
Learmonth 13 3234 3132
Fredericksburg 10 15
Planetary 13 18

Observed Kp for 14 Mar: 3434 4332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Mar 12 Quiet to unsettled
17 Mar 18 Mostly unsettled, with brief active periods possible.
18 Mar 8 Quiet to unsettled
COMMENT: A slight increase in the level of activity is expected on 17
Mar due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
15 Mar normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Mar normal normal fair
17 Mar normal fair poor
18 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
15 Mar 12 near predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
16 Mar 20 Near predicted monthly values
17 Mar 30 Mostly near predicted monthly values, with occasional
daylight enhancements of 10-20%.
18 Mar 30 Mostly near predicted monthly values, with occasional
daylight enhancements of 10-20%.
COMMENT: Spread F observed during the local night is possible again
today.
Observed Townsville frequencies: near predicted monthly values.
Observed Hobart frequencies: depressed 15-30%.

Please note the *if* in my original posting. You are not supposed to
upgrade from 3.1 to 3.11 and then give 3.1 away. It says so right
there in your quotation of the Microsoft agreement.

One of the reasons I don't like the Gordon West books is that he primarily
just gives answers with very short explanations. It seems oriented to
putting a 2-meter HT into your hand in the quickest possible time with no
real knowledge to go along with it.

I'm glad that I studied with the ARRL's _Now You're Talking_, because it
provided useful information first, then tested you on comprehension afterwards.
It's still an excellent reference -- for example, the section on antennas came
in very handy when I built my dipole. It has information that you'd never
find in a Gordon West book.

>and only upper management. Not wanting to start a flame war.
>

I'm sorry, your right: May all Rat Shack Upper Management burn in hell, lower management do time in Purgatory, and sales staff find new jobs in the food service industry or car lots.

I'm soul searching right now to see if I can remember exactly why I dislike Rat Shack .... It seems to be a combination of things starting with poor quality coax, and the heavy handed things the Upper Management did in the '70's (long story about salemen being to good at Tandy and making to much in commission sales, so they fire those salemen).

However I still buy SOME things from them. Their recent selling of AST computers was an improvement. Tandy has been pretty supportive of the HAMs in the Dallas/Ft.Worth area (they allow the HAM to use their parking lot for a tailgate sale on Saturday mornings).

I guess I could forgive them IF they stopped selling that POOR coax (the cause of
more than one RF problem for me) and ALL of the Upper management quit.

Regards.

3413. Contesting - why?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 00:56:48 UTC
From: dmunroe@vcd.hp.com
Message-ID: <D5IDAo.Hp8@vcd.hp.com>
Source record: 250707

Could someone explain what the appeal is in contesting? I realize that people have differing ideas of what is fun, but, if contesting is what I think it is, spending an entire weekend making thousands of extremely brief contacts not only sounds boring, but also seems to be an incredible abuse of the spectrum. Wouldn't it be more enjoyable to use the time to have real QSO's and possibly make new friends in the process?

Yet, I'm amazed at how popular contesting seems to be -- or at least that's the impression I get from the latest CQ. I'm even more amazed that amateurs in other countries have gotten hooked on this.

No, this is not a troll -- I really am trying to understand what the hook is that gets people involved in this.

>the antenna has 3 dB of gain, we end up with what we started at -- 100 watts
>being radiated."

>. . .

Oh, no, the antenna experts are at it again.

You put 100 watts into an antenna and get 200 out? Guess there's finally a
way to defeat the law of conservation of energy. Just loop 100 of the watts
back around, and you can run a 100 watt bulb from the rest.

Or, we can put 100 watts into the antenna, lose 50 as heat, and still
get 100 out? Come on, now.

No wonder so many people are confused and misinformed about antennas. Aren't
you guys embarrassed to publish stuff like this?

. . . Jees, I'm slow today. Of course! It's the APRIL issue! Ok, You got me!

Just another fool,

##
I am amazed at how MANY outfits there are that still cater to home-builders
and QRP operators. Must be a LOT of demand out there! Magazines such as
"73 Amateur Radio Today", QST (sometimes) and "Shortwave Magazine" (England)
still publish a lot of good construction articles for hams.
This is NOT an exhaustive list. If you have additions, send them to me and
I'll gladly add them to this list. Most of these companies will gladly
send you a catalogue if you call or write requesting one.
Also, if you find that one or two of these companies are out of business,
PLEASE drop me a message & let me know about it so I can delete them!

This list was prepared by AF4K, Brian Carling 7 January, 1995
Please send additional sources for inclusion in this list.
If you go to a hamfest and see someone selling tubes, get a card
please and send me their name, address and phone number.

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com

DE>As one of the "volunteers" that works for the Sterling Park buro, I thought
DE>I might answer the query.

I really appreciate it. Thanks also for volunteering!

DE>To give you an example, I have envelopes on file that I inheritted from my
DE>predecessor, which have 18 cents of postage - can anyone remember when 18
DE>cents
DE>was the first-class rate?

He he - maybe he is a "silent key!"

DE>postage - again, a waste. The biggest problem though, is the guy who doesn't
DE>put any evelopes on file - he gets notified once, and if no evelopes appear
DE>within 60 days, his cards start to get pitched until such a time an evelope
DE>does arrive.

Arrrrrrrrrrrgh! I hope this didn't happen to me. I was inactive from
about 1988-1992. I bet a few cards got pitched! Oh well, sob sob!

DE>Suggestion: The best thing is to put one unit of first-class postage on the
DE>evelopes, and additional increments as loose stamps -

Another suggestion - the guys could just put 32c stamp on there
and pay the "postage due" of the right amount when the envelope arrives.
Is this still a reliable way to get smail mail these days?

DE>that way we can match
DE>the
DE>postage to the amount of cards. You can also "trigger" the posting sequence

Yes, I think I prefer this idea of paper-clipping some extra 23 cent
stamps to the envelope when I send it to you guys.
Also, I think I'm using the wrong size. What is the official size?
6 X 9 inches or what?

DE>-- Darrell (NR3Y)

A 3 in 4-land!? I am a 4 in 3-land!
Again, thanks for the very helpful info, and please tell the whole
crew at SPARC and the QSL bureau that I said a hearty "THANK YOU!"

I have used a pot manufactured by CLAROSTAT which may be what you want.
I needed a pot which would turn beyond it's limits freely, and maintain
the max or min resistance, depending on the end that you're at.
Their description of this feature is "idle at stops"

I think that it's the CLARISTAT 364 series.
I got 'em from Newark.

Good luck,
Drew.

I think you will be happy with the Butterfly. I've had one running for a few years, and am pleased with its performance. The only problem I had was in the original setup; it is rather difficult to tune. Once set, it has been stable, however.

You should be able to get some of the anti-oxide compound directly from Butternut. I believe it is quite reasonable.

Good luck

> Is one less hard on the rig than the others?
>
> 73, Kris
>
Kris - "break-in" is a type of CW operation. It does not apply to other modes. The purpose of it is to allow the receiving station to interrupt the sending station if (s)he doesn't get everything right. It has its most usefulness in traffic-handling situations. Semi-breakin means that the radio switches out of send mode into receive mode at some preset interval after the last character is finished...the interval is adjustable by either a dial control or a knob on top (that's how it works in my 930). Full break-in means the radio switches IMMEDIATELY into receive after each character element is finished, so you get received audio not only between letters (as is the case in most semi-breakin operation) but also between the dits and dahs of individual letters. The receiving station can interrupt (break-in) by sending a string of dits while the other station is sending. Since the sending station is getting some receive time as well, he'll hear it, stop, and the receiving station can ask for a "fill" on whatever he missed. This mode of operation is also known as QSK.
No one of these modes is more or less hard on the rig than any of the others. Hope this helps. 73 - Alan NS0B

: Any help greatfully received.

: --

: Tony - G3SKR / AA2PM / tgold@microvst.demon.co.uk

Tony,
I have used these types of relays for many years. They give good
service. All I have done is to build a control box with a surplus 24V
transformer and a inline pack bridge rectifier and a switch. You need to
experiment with it. The toughest part to get is the canon plug on the
unit.

3429. Help with old callsign

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 05:35:31 UTC
From: pgsperseng@aol.com
Message-ID: <3k8in3$2gm@newsbf02.news.aol.com>
Source record: 250722

In my youth, I got a novice license but in the course of more than a few moves plus family and business obligations I dropped out of the ham scene for a while. I'm back on the air and want to retrace my history on the air. Does anybody have any callbooks circa 1968/69? I believe (he said red-faced) that my call was originally WN3MTP, then upgraded to the general call WA3TWT. Or was it WN3TWT to WA3MTP? That's the problem, along with my poor memory!!

The bottom line--I want to find out when I was originally licensed and with what call! Somebody with some old callbooks might be able to help.

Thanks,
Paul , AA1MI

3430. Callsign license plates in CA?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 05:46:15 UTC
From: epladsen@nyx10.cs.du.edu
Message-ID: <3k8jb7$45j@nyx10.cs.du.edu>
Source record: 250723

I have a few questions for anyone who is familiar with the procedure
for getting call plates in California:

1. Does California slash the zero for those with zero-land calls?

2. How much extra do the plates cost? One-time fee, or every year?

3. What form needs to be filled out to apply for the plates?

4. How long does it take to get the plates?

5. What is your opinion on the risk factor for break-ins and/or
vandalism that call plates add?

Thanks,
Eric

Source record: 250724

Hello CW experts,

I just failed my 12wpm (german)cw (HF upgrade)exam.
I have no problems copying random characters (grouped by 5)
but with text in clear I loose the line much faster, maybe
by trying to make sense out of the text just written or
by guessing the next characters of the current word.
I think this occupies my mind so much that I loose contact
to the code signs coming into my ear at that time.
What can I do to avoid that ? Is there any trick I can use ?
I tried to cover with my left hand the characters just written
but that seems a bit stupid and I wonder if there is an other
way to manage that.

I hear the torches firing up now, but here goes. When I first took
my amateur test it was 1977 or so. I took the test with my father at
my instructor's home. We were on vacation when the rest of the class
took the test. It was not necessary to go to the FCC office. There
were question pools available then just as there are now. As for
the memorization of the electronics, yes I'm guilty. I know that I
will never design or alter any circuit boards in my equipment without
the help or advise from someone who truly understands all of the
electronics involved. On the other hand, I feel confident that I can
operate amateur equipment within the limits of the law without having
to have someone operate the controls for me.

I am curious as to whether Dana has ever taught an amateur class? I
for one would not know what I know now had someone not given their
time to teach me. I am not in an electronics related profession.
